## HART

Coriolis flowmeter

- 
- Make sure the document is stored in a safe place such that it is always available when working on or with the device.
  - To avoid danger to individuals or the facility, read the "Basic safety instructions" section carefully, as well as all other safety instructions in the document that are specific to working procedures.
  - The manufacturer reserves the right to modify technical data without prior notice. Your Endress+Hauser Sales Center will supply you with current information and updates to these instructions.

# 1 Document information

## 1.1 Document function

These Operating Instructions contain all the information that is required in various phases of the life cycle of the device: from product identification, incoming acceptance and storage, to mounting, connection, operation and commissioning through to troubleshooting, maintenance and disposal.

## 1.2 Symbols used

### 1.2.1 Safety symbols

Symbol	Meaning
	<b>DANGER!</b> This symbol alerts you to a dangerous situation. Failure to avoid this situation will result in serious or fatal injury.
	<b>WARNING!</b> This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in serious or fatal injury.
	<b>CAUTION!</b> This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in minor or medium injury.
	<b>NOTE!</b> This symbol contains information on procedures and other facts which do not result in personal injury.

### 1.2.2 Electrical symbols

Symbol	Meaning
$\text{---}$	Direct current
$\sim$	Alternating current
$\overbrace{\sim}$	Direct current and alternating current
$\perp$	<b>Ground connection</b> A grounded terminal which, as far as the operator is concerned, is grounded via a grounding system.
$\ominus$	<b>Protective ground connection</b> A terminal which must be connected to ground prior to establishing any other connections.
$\diamond$	<b>Equipotential connection</b> A connection that has to be connected to the plant grounding system: This may be a potential equalization line or a star grounding system depending on national or company codes of practice.

### 1.2.3 Communication symbols

Symbol	Meaning
	<b>Wireless Local Area Network (WLAN)</b> Communication via a wireless, local network.
	<b>Bluetooth</b> Wireless data transmission between devices over a short distance.

Symbol	Meaning
	<b>LED</b> Light emitting diode is off.
	<b>LED</b> Light emitting diode is on.
	<b>LED</b> Light emitting diode is flashing.

#### 1.2.4 Tool symbols

Symbol	Meaning
	Flat blade screwdriver
	Allen key
	Open-ended wrench

#### 1.2.5 Symbols for certain types of information

Symbol	Meaning
	<b>Permitted</b> Procedures, processes or actions that are permitted.
	<b>Preferred</b> Procedures, processes or actions that are preferred.
	<b>Forbidden</b> Procedures, processes or actions that are forbidden.
	<b>Tip</b> Indicates additional information.
	Reference to documentation
	Reference to page
	Reference to graphic
	Notice or individual step to be observed
	Series of steps
	Result of a step
	Help in the event of a problem
	Visual inspection

#### 1.2.6 Symbols in graphics

Symbol	Meaning
1, 2, 3, ...	Item numbers
1, 2, 3, ...	Series of steps
A, B, C, ...	Views
A-A, B-B, C-C, ...	Sections

Symbol	Meaning
	Hazardous area
	Safe area (non-hazardous area)
	Flow direction

## 1.3 Documentation

 For an overview of the scope of the associated Technical Documentation, refer to the following:

- The *W@M Device Viewer* : Enter the serial number from the nameplate ([www.endress.com/deviceviewer](http://www.endress.com/deviceviewer))
- The *Endress+Hauser Operations App*: Enter the serial number from the nameplate or scan the 2-D matrix code (QR code) on the nameplate.

 For a detailed list of the individual documents along with the documentation code  
→  198

### 1.3.1 Standard documentation

Document type	Purpose and content of the document
Technical Information	<b>Planning aid for your device</b> The document contains all the technical data on the device and provides an overview of the accessories and other products that can be ordered for the device.
Sensor Brief Operating Instructions	<b>Guides you quickly to the 1st measured value - Part 1</b> The Sensor Brief Operating Instructions are aimed at specialists with responsibility for installing the measuring device. <ul style="list-style-type: none"> <li>▪ Incoming acceptance and product identification</li> <li>▪ Storage and transport</li> <li>▪ Installation</li> </ul>
Transmitter Brief Operating Instructions	<b>Guides you quickly to the 1st measured value - Part 2</b> The Transmitter Brief Operating Instructions are aimed at specialists with responsibility for commissioning, configuring and parameterizing the measuring device (until the first measured value). <ul style="list-style-type: none"> <li>▪ Product description</li> <li>▪ Installation</li> <li>▪ Electrical connection</li> <li>▪ Operation options</li> <li>▪ System integration</li> <li>▪ Commissioning</li> <li>▪ Diagnostic information</li> </ul>
Description of Device Parameters	<b>Reference for your parameters</b> The document provides a detailed explanation of each individual parameter in the Expert operating menu. The description is aimed at those who work with the device over the entire life cycle and perform specific configurations.

### 1.3.2 Supplementary device-dependent documentation

Additional documents are supplied depending on the device version ordered: Always comply strictly with the instructions in the supplementary documentation. The supplementary documentation is an integral part of the device documentation.

## 1.4 Registered trademarks

**HART®**

Registered trademark of the FieldComm Group, Austin, Texas, USA

**TRI-CLAMP®**

Registered trademark of Ladish & Co., Inc., Kenosha, USA

**Applicator®, FieldCare®, DeviceCare®, Field Xpert™, HistoROM®, TMB®, Heartbeat Technology™**

Registered or registration-pending trademarks of the Endress+Hauser Group

## 2 Basic safety instructions

### 2.1 Requirements for personnel

The personnel for installation, commissioning, diagnostics and maintenance must fulfill the following requirements:

- ▶ Trained, qualified specialists must have a relevant qualification for this specific function and task.
- ▶ Are authorized by the plant owner/operator.
- ▶ Are familiar with federal/national regulations.
- ▶ Before starting work, read and understand the instructions in the manual and supplementary documentation as well as the certificates (depending on the application).
- ▶ Follow instructions and comply with basic conditions.

The operating personnel must fulfill the following requirements:

- ▶ Are instructed and authorized according to the requirements of the task by the facility's owner-operator.
- ▶ Follow the instructions in this manual.

### 2.2 Designated use

#### Application and media

The measuring device described in these Instructions is intended only for flow measurement of liquids and gases.

Depending on the version ordered, the measuring device can also measure potentially explosive, flammable, poisonous and oxidizing media.

Measuring devices for use in hazardous areas, in hygienic applications or where there is an increased risk due to process pressure, are labeled accordingly on the nameplate.

To ensure that the measuring device remains in proper condition for the operation time:

- ▶ Only use the measuring device in full compliance with the data on the nameplate and the general conditions listed in the Operating Instructions and supplementary documentation.
- ▶ Based on the nameplate, check whether the ordered device is permitted for the intended use in the hazardous area (e.g. explosion protection, pressure vessel safety).
- ▶ Use the measuring device only for media to which the process-wetted materials are sufficiently resistant.
- ▶ If the measuring device is not operated at atmospheric temperature, compliance with the relevant basic conditions specified in the associated device documentation is absolutely essential: "Documentation" section. →  8.
- ▶ Protect the measuring device permanently against corrosion from environmental influences.

#### Incorrect use

Non-designated use can compromise safety. The manufacturer is not liable for damage caused by improper or non-designated use.

#### WARNING

##### Danger of breakage due to corrosive or abrasive fluids!

- ▶ Verify the compatibility of the process fluid with the sensor material.
- ▶ Ensure the resistance of all fluid-wetted materials in the process.
- ▶ Keep within the specified pressure and temperature range.

**NOTICE****Verification for borderline cases:**

- ▶ For special fluids and fluids for cleaning, Endress+Hauser is glad to provide assistance in verifying the corrosion resistance of fluid-wetted materials, but does not accept any warranty or liability as minute changes in the temperature, concentration or level of contamination in the process can alter the corrosion resistance properties.

**Residual risks****⚠ WARNING**

The electronics and the medium may cause the surfaces to heat up. This presents a burn hazard!

- ▶ For elevated fluid temperatures, ensure protection against contact to prevent burns.

## 2.3 Workplace safety

For work on and with the device:

- ▶ Wear the required personal protective equipment according to federal/national regulations.

For welding work on the piping:

- ▶ Do not ground the welding unit via the measuring device.

If working on and with the device with wet hands:

- ▶ Due to the increased risk of electric shock, gloves must be worn.

## 2.4 Operational safety

Risk of injury.

- ▶ Operate the device in proper technical condition and fail-safe condition only.
- ▶ The operator is responsible for interference-free operation of the device.

**Conversions to the device**

Unauthorized modifications to the device are not permitted and can lead to unforeseeable dangers.

- ▶ If, despite this, modifications are required, consult with Endress+Hauser.

**Repair**

To ensure continued operational safety and reliability,

- ▶ Carry out repairs on the device only if they are expressly permitted.
- ▶ Observe federal/national regulations pertaining to repair of an electrical device.
- ▶ Use original spare parts and accessories from Endress+Hauser only.

## 2.5 Product safety

This measuring device is designed in accordance with good engineering practice to meet state-of-the-art safety requirements, has been tested, and left the factory in a condition in which it is safe to operate.

It meets general safety standards and legal requirements. It also complies with the EU directives listed in the device-specific EU Declaration of Conformity. Endress+Hauser confirms this by affixing the CE mark to the device.

## 2.6 IT security

We only provide a warranty if the device is installed and used as described in the Operating Instructions. The device is equipped with security mechanisms to protect it against any inadvertent changes to the device settings.

IT security measures in line with operators' security standards and designed to provide additional protection for the device and device data transfer must be implemented by the operators themselves.

## 2.7 Device-specific IT security

The device offers a range of specific functions to support protective measures on the operator's side. These functions can be configured by the user and guarantee greater in-operation safety if used correctly. An overview of the most important functions is provided in the following section.

### 2.7.1 Protecting access via hardware write protection

Write access to the device parameters via the local display, Web browser or operating tool (e.g. FieldCare, DeviceCare) can be disabled via a write protection switch (DIP switch on the motherboard). When hardware write protection is enabled, only read access to the parameters is possible.

Hardware write protection is disabled when the device is delivered →  127.

### 2.7.2 Protecting access via a password

Different passwords are available to protect write access to the device parameters or access to the device via the WLAN interface.

- User-specific access code  
Protect write access to the device parameters via the local display, Web browser or operating tool (e.g. FieldCare, DeviceCare). Is equivalent to hardware write protection in terms of functionality.
- WLAN passphrase  
The network key protects a connection between an operating unit (e.g. notebook or tablet) and the device via the WLAN interface which can be ordered as an option.

#### User-specific access code

Write access to the device parameters via the local display, Web browser or operating tool (e.g. FieldCare, DeviceCare) can be protected by the modifiable, user-specific access code (→  126).

When the device is delivered, the device does not have an access code and is equivalent to 0000 (open).

#### WLAN passphrase

A connection between an operating unit (e.g. notebook or tablet) and the device via the WLAN interface (→  64) which can be ordered as an option is protected by the network key. The WLAN authentication of the network key complies with the IEEE 802.11 standard.

When the device is delivered, the network key is pre-defined depending on the device. It can be changed via the **WLAN settings** submenu in the **WLAN passphrase** parameter →  119.

#### General notes on the use of passwords

- The access code and network key supplied with the device should be changed during commissioning.
- Follow the general rules for generating a secure password when defining and managing the access code or network key.
- The user is responsible for the management and careful handling of the access code and network key.

#### 2.7.3 Access via fieldbus

When communicating via fieldbus, access to the device parameters can be restricted to "Read only" access. The option can be changed in the **Fieldbus writing access** parameter.

This does not affect cyclic measured value transmission to the higher-order system, which is always guaranteed.

 Additional information: "Description of Device Parameters" document pertaining to the device → 198.

#### 2.7.4 Access via Web server

The device can be operated and configured via a Web browser with the integrated Web server (→ 57). The connection is via the service interface (CDI-RJ45) or the WLAN interface.

The Web server is enabled when the device is delivered. The Web server can be disabled if necessary (e.g. after commissioning) via the **Web server functionality** parameter.

The device and status information can be hidden on the login page. This prevents unauthorized access to the information.

 Additional information: "Description of Device Parameters" document pertaining to the device → 198.

### 3 Product description

The device consists of a transmitter and a sensor.

The device is available as a compact version:

The transmitter and sensor form a mechanical unit.

#### 3.1 Product design

## 4 Incoming acceptance and product identification

### 4.1 Incoming acceptance

A0028673

Are the order codes on the delivery note (1) and the product sticker (2) identical?

A0029314

A0029315

A0028673

Are the goods undamaged?

A0029316

A0028673

Do the nameplate data match the ordering information on the delivery note?

A0029317

A0028673

Is the CD-ROM with the Technical Documentation (depends on device version) and documents present?

A0029318

- If one of the conditions is not satisfied, contact your Endress+Hauser Sales Center.
- Depending on the device version, the CD-ROM might not be part of the delivery! The Technical Documentation is available via the Internet or via the *Endress+Hauser Operations App*, see the "Product identification" section → 16.

## 4.2 Product identification

The following options are available for identification of the measuring device:

- Nameplate specifications
- Order code with breakdown of the device features on the delivery note
- Enter serial numbers from nameplates in *W@M Device Viewer* ([www.endress.com/deviceviewer](http://www.endress.com/deviceviewer)): All information about the measuring device is displayed.
- Enter the serial number from the nameplates into the *Endress+Hauser Operations App* or scan the 2-D matrix code (QR code) on the nameplate with the *Endress+Hauser Operations App*: all the information for the measuring device is displayed.

For an overview of the scope of the associated Technical Documentation, refer to the following:

- The chapters "Additional standard documentation on the device" → 8 and "Supplementary device-dependent documentation" → 8
- The *W@M Device Viewer*: Enter the serial number from the nameplate ([www.endress.com/deviceviewer](http://www.endress.com/deviceviewer))
- The *Endress+Hauser Operations App*: Enter the serial number from the nameplate or scan the 2-D matrix code (QR code) on the nameplate.

#### 4.2.1 Transmitter nameplate

A0029192

2 Example of a transmitter nameplate

- 1 Manufacturing location
- 2 Name of the transmitter
- 3 Order code
- 4 Serial number (ser. no.)
- 5 Extended order code (Ext. ord. cd.)
- 6 Degree of protection
- 7 Space for approvals: use in hazardous areas
- 8 Electrical connection data: available inputs and outputs
- 9 2-D matrix code
- 10 Manufacturing date: year-month
- 11 Document number of safety-related supplementary documentation
- 12 Space for approvals and certificates: e.g. CE mark, C-Tick
- 13 Space for degree of protection of connection and electronics compartment when used in hazardous areas
- 14 Firmware version (FW) and device revision (Dev.Rev.) from the factory
- 15 Space for additional information in the case of special products
- 16 Permitted temperature range for cable
- 17 Permitted ambient temperature ( $T_a$ )
- 18 Information on cable gland
- 19 Available inputs and outputs, supply voltage
- 20 Electrical connection data: supply voltage

## 4.2.2 Sensor nameplate

A0029199

3 Example of a sensor nameplate

- 1 Name of the sensor
- 2 Manufacturing location
- 3 Order code
- 4 Serial number (ser. no.)
- 5 Extended order code (Ext. ord. cd.)
- 6 Nominal diameter of the sensor; flange nominal diameter/nominal pressure; sensor test pressure; medium temperature range; material of measuring tube and manifold; sensor-specific information: e.g. pressure range of secondary containment, wide-range density specification (special density calibration)
- 7 Approval information for explosion protection, Pressure Equipment Directive and degree of protection
- 8 Flow direction
- 9 Manufacturing date: year-month
- 10 2-D matrix code
- 11 Document number of safety-related supplementary documentation
- 12 CE mark, C-Tick
- 13 Surface roughness
- 14 Permitted ambient temperature ( $T_a$ )

### Order code

The measuring device is reordered using the order code.

#### Extended order code

- The device type (product root) and basic specifications (mandatory features) are always listed.
- Of the optional specifications (optional features), only the safety and approval-related specifications are listed (e.g. LA). If other optional specifications are also ordered, these are indicated collectively using the # placeholder symbol (e.g. #LA#).
- If the ordered optional specifications do not include any safety and approval-related specifications, they are indicated by the + placeholder symbol (e.g. XXXXXX-ABCDE +).

#### 4.2.3 Symbols on measuring device

Symbol	Meaning
	<b>WARNING!</b> This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in serious or fatal injury.
	<b>Reference to documentation</b> Refers to the corresponding device documentation.
	<b>Protective ground connection</b> A terminal which must be connected to ground prior to establishing any other connections.

## 5 Storage and transport

### 5.1 Storage conditions

Observe the following notes for storage:

- Store in the original packaging to ensure protection from shock.
- Do not remove protective covers or protective caps installed on process connections. They prevent mechanical damage to the sealing surfaces and contamination in the measuring tube.
- Protect from direct sunlight to avoid unacceptably high surface temperatures.
- Store in a dry and dust-free place.
- Do not store outdoors.

Storage temperature: -50 to +80 °C (-58 to +176 °F),

### 5.2 Transporting the product

Transport the measuring device to the measuring point in the original packaging.

A0029252

**i** Do not remove protective covers or caps installed on process connections. They prevent mechanical damage to the sealing surfaces and contamination in the measuring tube.

#### 5.2.1 Measuring devices without lifting lugs

##### **⚠ WARNING**

Center of gravity of the measuring device is higher than the suspension points of the webbing slings.

Risk of injury if the measuring device slips.

- ▶ Secure the measuring device against slipping or turning.
- ▶ Observe the weight specified on the packaging (stick-on label).

A0029214

### 5.2.2 Measuring devices with lifting lugs

#### **⚠ CAUTION**

##### Special transportation instructions for devices with lifting lugs

- ▶ Only use the lifting lugs fitted on the device or flanges to transport the device.
- ▶ The device must always be secured at two lifting lugs at least.

### 5.2.3 Transporting with a fork lift

If transporting in wood crates, the floor structure enables the crates to be lifted lengthwise or at both sides using a forklift.

## 5.3 Packaging disposal

All packaging materials are environmentally friendly and 100% recyclable:

- Measuring device secondary packaging: polymer stretch film that conforms to EC Directive 2002/95/EC (RoHS).
- Packaging:
  - Wood crate, treated in accordance with ISPM 15 standard, which is confirmed by the affixed IPPC logo.  
or
  - Carton in accordance with European Packaging Directive 94/62EC; recyclability is confirmed by the affixed RESY symbol.
- Seaworthy packaging (optional): Wood crate, treated in accordance with ISPM 15 standard, which is confirmed by the affixed IPPC logo.
- Carrying and mounting hardware:
  - Disposable plastic pallet
  - Plastic straps
  - Plastic adhesive strips
- Dunnage: Paper cushion

## 6 Installation

### 6.1 Installation conditions

No special measures such as supports are necessary. External forces are absorbed by the construction of the device.

#### 6.1.1 Mounting position

##### Mounting location

To prevent measuring errors arising from accumulation of gas bubbles in the measuring tube, avoid the following mounting locations in the pipe:

- Highest point of a pipeline.
- Directly upstream of a free pipe outlet in a down pipe.

##### Installation in down pipes

However, the following installation suggestion allows for installation in an open vertical pipeline. Pipe restrictions or the use of an orifice with a smaller cross-section than the nominal diameter prevent the sensor running empty while measurement is in progress.

■ 4 Installation in a down pipe (e.g. for batching applications)

- 1 Supply tank
- 2 Sensor
- 3 Orifice plate, pipe restriction
- 4 Valve
- 5 Batching tank

DN		Ø orifice plate, pipe restriction	
[mm]	[in]	[mm]	[in]
8	3/8	6	0.24
15	1/2	10	0.40
15 FB	1/2 FB	15	0.60
25	1	14	0.55
25 FB	1 FB	24	0.95
40	1 1/2	22	0.87
40 FB	1 1/2 FB	35	1.38
50	2	28	1.10
50 FB	2 FB	54	2.13
80	3	50	1.97

FB = Full bore

## Orientation

The direction of the arrow on the sensor nameplate helps you to install the sensor according to the flow direction (direction of medium flow through the piping).

Orientation			Recommendation
A	Vertical orientation		<input checked="" type="checkbox"/> <input checked="" type="checkbox"/>
B	Horizontal orientation, transmitter at top		<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> <sup>1)</sup> Exceptions:
C	Horizontal orientation, transmitter at bottom		<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> <sup>2)</sup> Exceptions:
D	Horizontal orientation, transmitter at side		<input checked="" type="checkbox"/> <input checked="" type="checkbox"/>

- 1) Applications with low process temperatures may decrease the ambient temperature. To maintain the minimum ambient temperature for the transmitter, this orientation is recommended.
- 2) Applications with high process temperatures may increase the ambient temperature. To maintain the maximum ambient temperature for the transmitter, this orientation is recommended.

## Inlet and outlet runs

No special precautions need to be taken for fittings which create turbulence, such as valves, elbows or T-pieces, as long as no cavitation occurs →  24.

### *Installation dimensions*

 For the dimensions and installation lengths of the device, see the "Technical Information" document, "Mechanical construction" section

## 6.1.2 Requirements from environment and process

### Ambient temperature range

<b>Measuring device</b>	Non-Ex	-40 to +60 °C (-40 to +140 °F)
	Ex ec, NI version	-40 to +60 °C (-40 to +140 °F)
	Ex ia, IS version	<ul style="list-style-type: none"> <li>▪ -40 to +60 °C (-40 to +140 °F)</li> <li>▪ Order code for "Test, certificate", option JP</li> <li>▪ -50 to +60 °C (-58 to +140 °F)</li> </ul>
<b>Readability of the local display</b>		-20 to +60 °C (-4 to +140 °F) The readability of the display may be impaired at temperatures outside the temperature range.

- ▶ If operating outdoors:  
Avoid direct sunlight, particularly in warm climatic regions.

 You can order a weather protection cover from Endress+Hauser : →  165

### System pressure

It is important that cavitation does not occur, or that gases entrained in the liquids do not outgas.

Cavitation is caused if the pressure drops below the vapor pressure:

- In liquids that have a low boiling point (e.g. hydrocarbons, solvents, liquefied gases)
- In suction lines
- ▶ Ensure the system pressure is sufficiently high to prevent cavitation and outgassing.

For this reason, the following mounting locations are recommended:

- At the lowest point in a vertical pipe
- Downstream from pumps (no danger of vacuum)

### Thermal insulation

In the case of some fluids, it is important that the heat radiated from the sensor to the transmitter is kept to a minimum. A wide range of materials can be used for the required insulation.

#### **NOTICE**

#### **Electronics overheating on account of thermal insulation!**

- ▶ Observe maximum permitted insulation height of the transmitter neck so that the transmitter head is completely free.

**NOTICE****Danger of overheating with insulation**

- Ensure that the temperature at the lower end of the transmitter housing does not exceed 80 °C (176 °F)

**NOTICE****The insulation can also be thicker than the maximum recommended insulation thickness.**

Prerequisite:

- Ensure that convection takes place on a sufficiently large scale at the transmitter neck.
- Ensure that a sufficiently large area of the housing support remains exposed. The uncovered part serves as a radiator and protects the electronics from overheating and excessive cooling.

A0028853

*a* Minimum distance to insulation  
*t* maximum Insulation thickness

The minimum distance *a* between the transmitter and the insulation is 10 mm (0.39 in). This is to ensure that the transmitter remains completely exposed.

**Maximum recommended insulation thickness**

A0028904

Graph 5 Maximum recommended insulation thickness depending on the temperature of the medium and the ambient temperature

*t* Insulation thickness

$T_m$  Medium temperature

$t_{40(104)}$  Maximum recommended insulation thickness at an ambient temperature of  $T_a = 40$  °C (104 °F)

$t_{60(140)}$  Maximum recommended insulation thickness at an ambient temperature of  $T_a = 60$  °C (140 °F)

**Maximum recommended insulation thickness for the extended temperature range or insulation**

For the version extension neck for insulation order code for "Sensor option", option CG:

A0029981

## Heating

### NOTICE

Electronics can overheat due to elevated ambient temperature!

- ▶ Observe maximum permitted ambient temperature for the transmitter .
- ▶ Depending on the fluid temperature, take the device orientation requirements into account .

### NOTICE

Danger of overheating when heating

- ▶ Ensure that the temperature at the lower end of the transmitter housing does not exceed 80 °C (176 °F).
- ▶ Ensure that convection takes place on a sufficiently large scale at the transmitter neck.
- ▶ Ensure that a sufficiently large area of the housing support remains exposed. The uncovered part serves as a radiator and protects the electronics from overheating and excessive cooling.

### Heating options

If a fluid requires that no heat loss should occur at the sensor, users can avail of the following heating options:

- Electrical heating, e.g. with electric band heaters
- Via pipes carrying hot water or steam
- Via heating jackets

### Using an electrical trace heating system

If heating is regulated via phase angle control or pulse packages, magnetic fields can affect the measured values (= for values that are greater than the values permitted by the EN standard (sine 30 A/m)).

For this reason, the sensor must be magnetically shielded: the housing can be shielded with tin plates or electric sheets without a privileged direction (e.g. V330-35A).

The sheet must have the following properties:

- Relative magnetic permeability  $\mu_r \geq 300$
- Plate thickness  $d \geq 0.35$  mm ( $d \geq 0.014$  in)

## Vibrations

The high oscillation frequency of the measuring tubes ensures that the correct operation of the measuring system is not influenced by plant vibrations.

### 6.1.3 Special mounting instructions

#### Complete drainability guaranteed

When the sensor is installed in a horizontal line, eccentric clamps can be used to ensure complete drainability. When the system is pitched in a specific direction and at a specific slope, gravity can be used to achieve complete drainability. The sensor must be mounted in the correct position to ensure full drainability in the horizontal position. Markings on the sensor show the correct mounting position to optimize drainability.

A0030297

- 1 Eccentric clamp connection
- 2 "This side up" label indicates which side is up
- 3 Slope the device in accordance with the hygiene guidelines. Slope: approx. 2 % or 21 mm/m (0.24 in/feet)
- 4 Line on the underside indicates the lowest point of the eccentric process connection.

#### Securing with mounting clamp in the case of hygiene connections

It is not necessary to provide additional support for the sensor for operational performance purposes. If, however, additional support is required for installation purposes, the following dimensions must be observed.

Use mounting clamp with lining between clamp and measuring instrument.

A0030298

DN		A		B		C	
[mm]	[in]	[mm]	[in]	[mm]	[in]	[mm]	[in]
8	8	373	14.69	20	0.79	40	1.57
15	15	409	16.1	20	0.79	40	1.57
15 FB	15 FB	539	21.22	30	1.18	44.5	1.75
25	25	539	21.22	30	1.18	44.5	1.75
25 FB	25 FB	668	26.3	28	1.1	60	2.36
40	40	668	26.3	28	1.1	60	2.36

DN		A		B		C	
[mm]	[in]	[mm]	[in]	[mm]	[in]	[mm]	[in]
40 FB	40 FB	780	30.71	35	1.38	80	3.15
50	50	780	30.71	35	1.38	80	3.15
50 FB	50 FB	1152	45.35	57	2.24	90	3.54
80	80	1152	45.35	57	2.24	90	3.54

### Zero point adjustment

All measuring devices are calibrated in accordance with state-of-the-art technology. Calibration takes place under reference conditions → 178. Therefore, a zero point adjustment in the field is generally not required.

Experience shows that zero point adjustment is advisable only in special cases:

- To achieve maximum measuring accuracy even with low flow rates
- Under extreme process or operating conditions (e.g. very high process temperatures or very high-viscosity fluids).

### Protective cover

### Cover locking

#### NOTICE

Order code for "Housing", option L "Cast, stainless": The covers of the transmitter housing are provided with a borehole to lock the cover.

The cover can be locked using screws and a chain or cable provided by the customer.

- ▶ It is recommended to use stainless steel cables or chains.
- ▶ If a protective coating is applied, it is recommended to use a heat shrink tube to protect the housing paint.

1 Cover borehole for the securing screw  
2 Securing screw to lock the cover

## 6.2 Mounting the measuring device

### 6.2.1 Required tools

#### For sensor

For flanges and other process connections: Corresponding mounting tools

### 6.2.2 Preparing the measuring device

- 1 Remove all remaining transport packaging.
- 2 Remove any protective covers or protective caps present from the sensor.
- 3 Remove stick-on label on the electronics compartment cover.

### 6.2.3 Mounting the measuring device

#### **⚠ WARNING**

##### Danger due to improper process sealing!

- ▶ Ensure that the inside diameters of the gaskets are greater than or equal to that of the process connections and piping.
- ▶ Ensure that the gaskets are clean and undamaged.
- ▶ Install the gaskets correctly.

- 1 Ensure that the direction of the arrow on the nameplate of the sensor matches the flow direction of the fluid.

2. Install the measuring device or turn the transmitter housing so that the cable entries do not point upwards.

#### 6.2.4 Turning the transmitter housing

To provide easier access to the connection compartment or display module, the transmitter housing can be turned.

1. Loosen the securing clamp of the connection compartment cover.
2. Unscrew the connection compartment cover.
3. Release the fixing screw.
4. Turn the housing to the desired position.
5. Firmly tighten the securing screw.
6. Screw on the connection compartment cover
7. Fit the securing clamp of the connection compartment cover.

#### 6.2.5 Turning the display module

The display module can be turned to optimize display readability and operability.

1. Loosen the securing clamp of the connection compartment cover.
2. Unscrew the connection compartment cover.
3. Turn the display module to the desired position: max.  $8 \times 45^\circ$  in every direction.
4. Screw on the connection compartment cover.
5. Fit the securing clamp of the connection compartment cover.

### 6.3 Post-installation check

Is the device undamaged (visual inspection)?	<input type="checkbox"/>
Does the measuring device conform to the measuring point specifications?  For example: <ul style="list-style-type: none"><li>▪ Process temperature → 184</li><li>▪ Process pressure (refer to the chapter on "Pressure-temperature ratings" of the "Technical Information" document)</li><li>▪ Ambient temperature</li><li>▪ Measuring range</li></ul>	<input type="checkbox"/>
Has the correct orientation for the sensor been selected ?  <ul style="list-style-type: none"><li>▪ According to sensor type</li><li>▪ According to medium temperature</li><li>▪ According to medium properties (outgassing, with entrained solids)</li></ul>	<input type="checkbox"/>
Does the arrow on the sensor nameplate match the direction of flow of the fluid through the piping → 23?	<input type="checkbox"/>
Are the measuring point identification and labeling correct (visual inspection)?	<input type="checkbox"/>
Is the device adequately protected from precipitation and direct sunlight?	<input type="checkbox"/>
Are the securing screw and securing clamp tightened securely?	<input type="checkbox"/>

## 7 Electrical connection

### NOTICE

The measuring device does not have an internal circuit breaker.

- ▶ For this reason, assign the measuring device a switch or power-circuit breaker so that the power supply line can be easily disconnected from the mains.
- ▶ Although the measuring device is equipped with a fuse, additional overcurrent protection (maximum 10 A) should be integrated into the system installation.

### 7.1 Connection conditions

#### 7.1.1 Required tools

- For cable entries: Use corresponding tools
- For securing clamp: Allen key 3 mm
- Wire stripper
- When using stranded cables: Crimper for wire end ferrule
- For removing cables from terminal: Flat blade screwdriver  $\leq$  3 mm (0.12 in)

#### 7.1.2 Requirements for connecting cable

The connecting cables provided by the customer must fulfill the following requirements.

##### Electrical safety

In accordance with applicable federal/national regulations.

##### Protective ground cable

Cable: 2.1 mm<sup>2</sup> (14 AWG)

The grounding impedance must be less than 1  $\Omega$ .

##### Permitted temperature range

Minimum requirement: cable temperature range  $\geq$  ambient temperature +20 K

##### Power supply cable

Standard installation cable is sufficient.

##### Signal cable

*Current output 4 to 20 mA HART*

A shielded cable is recommended. Observe grounding concept of the plant.

*Current output 0/4 to 20 mA*

Standard installation cable is sufficient.

*Pulse/frequency/switch output*

Standard installation cable is sufficient.

*Double pulse output*

Standard installation cable is sufficient.

*Relay output*

Standard installation cable is sufficient.

*Current input 0/4 to 20 mA*

Standard installation cable is sufficient.

*Status input*

Standard installation cable is sufficient.

#### Cable diameter

- Cable glands supplied:  
M20 × 1.5 with cable Ø 6 to 12 mm (0.24 to 0.47 in)
- Spring terminals:  
Conductor cross-section 0.2 to 2.5 mm<sup>2</sup> (24 to 12 AWG)

#### Connecting cable for transmitter - remote display and operating module DKX001

##### Standard cable

A standard cable can be used as the connecting cable.

<b>Standard cable</b>	4 cores (2 pairs); pair-stranded with common shield
<b>Shielding</b>	Tin-plated copper-braid, optical cover ≥ 85 %
<b>Capacitance: core/shield</b>	Maximum 1000 nF for Zone 1, Class I, Division 1
<b>L/R</b>	Maximum 24 µH/Ω for Zone 1, Class I, Division 1
<b>Cable length</b>	Maximum 300 m (1000 ft), see the following table

Cross-section	Cable length for use in non-hazardous area, Ex Zone 2, Class I, Division 2 Ex Zone 1, Class I, Division 1
0.34 mm <sup>2</sup> (22 AWG)	80 m (270 ft)
0.50 mm <sup>2</sup> (20 AWG)	120 m (400 ft)
0.75 mm <sup>2</sup> (18 AWG)	180 m (600 ft)
1.00 mm <sup>2</sup> (17 AWG)	240 m (800 ft)
1.50 mm <sup>2</sup> (15 AWG)	300 m (1000 ft)

*Optionally available connecting cable*

<b>Standard cable</b>	2 × 2 × 0.34 mm <sup>2</sup> (22 AWG) PVC cable with common shield (2 pairs, pair-stranded)
<b>Flame resistance</b>	According to DIN EN 60332-1-2
<b>Oil-resistance</b>	According to DIN EN 60811-2-1
<b>Shielding</b>	Tin-plated copper-braid, optical cover ≥ 85 %
<b>Capacitance: core/shield</b>	≤ 200 pF/m
<b>L/R</b>	≤ 24 µH/Ω
<b>Available cable length</b>	10 m (35 ft)
<b>Operating temperature</b>	When mounted in a fixed position: -50 to +105 °C (-58 to +221 °F); when cable can move freely: -25 to +105 °C (-13 to +221 °F)

### 7.1.3 Terminal assignment

#### Transmitter: supply voltage, input/outputs

The terminal assignment of the inputs and outputs depends on the individual order version of the device. The device-specific terminal assignment is documented on an adhesive label in the terminal cover.

Supply voltage		Input/output 1		Input/output 2		Input/output 3	
1 (+)	2 (-)	26 (+)	27 (-)	24 (+)	25 (-)	22 (+)	23 (-)
Device-specific terminal assignment: adhesive label in terminal cover.							

 Terminal assignment of the remote display and operating module: → [37](#)

### 7.1.4 Preparing the measuring device

#### NOTICE

##### Insufficient sealing of the housing!

Operational reliability of the measuring device could be compromised.

- Use suitable cable glands corresponding to the degree of protection.

1. Remove dummy plug if present.
2. If the measuring device is supplied without cable glands:  
Provide suitable cable gland for corresponding connecting cable.
3. If the measuring device is supplied with cable glands:  
Observe requirements for connecting cables → [32](#).

## 7.2 Connecting the measuring device

#### NOTICE

##### Limitation of electrical safety due to incorrect connection!

- Have electrical connection work carried out by correspondingly trained specialists only.
- Observe applicable federal/national installation codes and regulations.
- Comply with local workplace safety regulations.
- Always connect the protective ground cable  $\ominus$  before connecting additional cables.
- For use in potentially explosive atmospheres, observe the information in the device-specific Ex documentation.

### 7.2.1 Connecting the transmitter

A0026781

- 1 Cable entry for supply voltage
- 2 Cable entry for signal transmission, input/output 1 and 2
- 3 Cable entry for input/output signal transmission; Optional: connection of external WLAN antenna, connection of remote display and operating module DKX001 or service plug

1. Loosen the securing clamp of the connection compartment cover.
2. Unscrew the connection compartment cover.
3. Squeeze the tabs of the display module holder together.
4. Remove the display module holder.

5. Attach the holder to the edge of the electronics compartment.
6. Open the terminal cover.

7. Push the cable through the cable entry . To ensure tight sealing, do not remove the sealing ring from the cable entry.
8. Strip the cable and cable ends. In the case of stranded cables, also fit ferrules.
9. Connect the protective ground.

A0029816

10. Connect the cable in accordance with the terminal assignment .
  - ↳ **Signal cable terminal assignment:** The device-specific terminal assignment is documented on an adhesive label in the terminal cover.
  - Supply voltage terminal assignment:** Adhesive label in the terminal cover or → 34.
11. Firmly tighten the cable glands.
  - ↳ This concludes the cable connection process.
12. Close the terminal cover.
13. Fit the display module holder in the electronics compartment.
14. Screw on the connection compartment cover.
15. Secure the securing clamp of the connection compartment cover.

#### Removing a cable

A0029598

6 Engineering unit mm (in)

1. To remove a cable from the terminal, use a flat-blade screwdriver to push the slot between the two terminal holes
2. while simultaneously pulling the cable end out of the terminal.

## 7.2.2 Connecting remote display and operating module DKX001

### NOTICE

If ordered subsequently: only one display or operation unit may be connected to the transmitter at any one time.

The remote display and operating module DKX001 cannot be connected at the same time as the existing display or operation unit.

- Existing integrated display module: disconnect electrical connection.
- Connect the remote display and operating module DKX001.

- 1 Remote display and operating module DKX001
- 2 Connecting cable
- 3 Measuring device

Remote display and operating module DKX001 → [165](#)

## 7.3 Ensure potential equalization

### 7.3.1 Requirements

No special measures for potential equalization are required.

## 7.4 Special connection instructions

### 7.4.1 Connection examples

#### Current output 4 to 20 mA HART

A0029055

Fig. 7 Connection example for 4 to 20 mA HART current output (active)

17 Connection example for 4 to 20 mA current input

- 1 Power supply
- 2 External measuring device (for reading in pressure or temperature, for instance)
- 3 Transmitter: Observe input values

### Status input

18 Connection example for status input

- 1 Automation system with status output (e.g. PLC)
- 2 Power supply
- 3 Transmitter: Observe input values

## 7.5 Ensuring the degree of protection

The measuring device fulfills all the requirements for the IP66/67 degree of protection, Type 4X enclosure.

To guarantee IP66/67 degree of protection, Type 4X enclosure, carry out the following steps after the electrical connection:

1. Check that the housing seals are clean and fitted correctly.
2. Dry, clean or replace the seals if necessary.
3. Tighten all housing screws and screw covers.
4. Firmly tighten the cable glands.
5. To ensure that moisture does not enter the cable entry:  
Route the cable so that it loops down before the cable entry ("water trap").

6. Insert dummy plugs into unused cable entries.

## 7.6 Post-connection check

Are cables or the device undamaged (visual inspection)?	<input type="checkbox"/>
Do the cables used meet the requirements?	<input type="checkbox"/>
Do the cables have adequate strain relief?	<input type="checkbox"/>
Are all the cable glands installed, firmly tightened and leak-tight? Cable run with "water trap" →  42 ?	<input type="checkbox"/>
If supply voltage is present, do values appear on the display module?	<input type="checkbox"/>

## 8 Operation options

### 8.1 Overview of operation options

- 1 Local operation via display module
- 2 Computer with Web browser (e.g. Internet Explorer) or with operating tool (e.g. FieldCare, DeviceCare, AMS Device Manager, SIMATIC PDM)
- 3 Field Xpert SFX350 or SFX370
- 4 Field Communicator 475
- 5 Mobile handheld terminal
- 6 Control system (e.g. PLC)

## 8.2 Structure and function of the operating menu

### 8.2.1 Structure of the operating menu

 For an overview of the operating menu for experts: "Description of Device Parameters" document supplied with the device → [198](#)

 19 Schematic structure of the operating menu

A0018237-EN

## 8.2.2 Operating philosophy

The individual parts of the operating menu are assigned to certain user roles (operator, maintenance etc.). Each user role contains typical tasks within the device lifecycle.

Menu/parameter		User role and tasks	Content/meaning
Language	task-oriented	<b>Role "Operator", "Maintenance"</b> Tasks during operation: <ul style="list-style-type: none"><li>▪ Configuring the operational display</li><li>▪ Reading measured values</li></ul>	<ul style="list-style-type: none"><li>▪ Defining the operating language</li><li>▪ Defining the Web server operating language</li><li>▪ Resetting and controlling totalizers</li></ul>
Operation			<ul style="list-style-type: none"><li>▪ Configuring the operational display (e.g. display format, display contrast)</li><li>▪ Resetting and controlling totalizers</li></ul>
Setup		<b>"Maintenance" role</b> Commissioning: <ul style="list-style-type: none"><li>▪ Configuration of the measurement</li><li>▪ Configuration of the inputs and outputs</li><li>▪ Configuration of the communication interface</li></ul>	Wizards for fast commissioning: <ul style="list-style-type: none"><li>▪ Set the system units</li><li>▪ Configuration of the communication interface</li><li>▪ Define the medium</li><li>▪ Display I/O/configuration</li><li>▪ Configure the inputs</li><li>▪ Configure the outputs</li><li>▪ Configuring the operational display</li><li>▪ Define the output conditioning</li><li>▪ Set the low flow cut off</li><li>▪ Configure partial and empty pipe detection</li></ul> Advanced setup <ul style="list-style-type: none"><li>▪ For more customized configuration of the measurement (adaptation to special measuring conditions)</li><li>▪ Configuration of totalizers</li><li>▪ Configure the WLAN settings</li><li>▪ Administration (define access code, reset measuring device)</li></ul>
Diagnostics		<b>"Maintenance" role</b> Fault elimination: <ul style="list-style-type: none"><li>▪ Diagnostics and elimination of process and device errors</li><li>▪ Measured value simulation</li></ul>	Contains all parameters for error detection and analyzing process and device errors: <ul style="list-style-type: none"><li>▪ Diagnostic list Contains up to 5 currently pending diagnostic messages.</li><li>▪ Event logbook Contains event messages that have occurred.</li><li>▪ Device information Contains information for identifying the device.</li><li>▪ Measured values Contains all current measured values.</li><li>▪ <b>Data logging</b> submenu with "Extended HistoROM" order option Storage and visualization of measured values</li><li>▪ Heartbeat The functionality of the device is checked on demand and the verification results are documented.</li><li>▪ Simulation Is used to simulate measured values or output values.</li></ul>
Expert	function-oriented	Tasks that require detailed knowledge of the function of the device: <ul style="list-style-type: none"><li>▪ Commissioning measurements under difficult conditions</li><li>▪ Optimal adaptation of the measurement to difficult conditions</li><li>▪ Detailed configuration of the communication interface</li><li>▪ Error diagnostics in difficult cases</li></ul>	Contains all the parameters of the device and makes it possible to access these parameters directly using an access code. The structure of this menu is based on the function blocks of the device: <ul style="list-style-type: none"><li>▪ System Contains all higher-order device parameters which do not concern the measurement or the communication interface.</li><li>▪ Sensor Configuration of the measurement.</li><li>▪ Input Configuring the status input.</li><li>▪ Output Configuring of the analog current outputs as well as the pulse/frequency and switch output.</li><li>▪ Communication Configuration of the digital communication interface and the Web server.</li><li>▪ Application Configure the functions that go beyond the actual measurement (e.g. totalizer).</li><li>▪ Diagnostics Error detection and analysis of process and device errors and for device simulation and Heartbeat Technology.</li></ul>

## 8.3 Access to the operating menu via the local display

### 8.3.1 Operational display

A0029348

- 1 Operational display
- 2 Device tag
- 3 Status area
- 4 Display area for measured values (4-line)
- 5 Operating elements → [51](#)

#### Status area

The following symbols appear in the status area of the operational display at the top right:

- Status signals → [145](#)
  - **F**: Failure
  - **C**: Function check
  - **S**: Out of specification
  - **M**: Maintenance required
- Diagnostic behavior → [146](#)
  - **×**: Alarm
  - **⚠**: Warning
- **🔒**: Locking (the device is locked via the hardware )
- **↔**: Communication (communication via remote operation is active)

#### Display area

In the display area, each measured value is prefaced by certain symbol types for further description:

#### Measured values

Symbol	Meaning
	▪ Mass flow
	<ul style="list-style-type: none"> <li>▪ Volume flow</li> <li>▪ Corrected volume flow</li> </ul>

	Density Reference density
	Temperature
	Totalizer The measurement channel number indicates which of the three totalizers is displayed.
	Output The measurement channel number indicates which of the outputs is displayed.
	Status input

*Measurement channel numbers*

Symbol	Meaning
	Measurement channel 1 to 4
The measurement channel number is displayed only if more than one channel is present for the same measured variable type (e.g. Totalizer 1 to 3).	

*Diagnostic behavior*

The diagnostic behavior pertains to a diagnostic event that is relevant to the displayed measured variable.  
For information on the symbols → 146

The number and display format of the measured values can be configured via the **"Format display" parameter** → 103. Operation → Display → Format display

### 8.3.2 Navigation view

#### Navigation path

The navigation path - displayed at the top left in the navigation view - consists of the following elements:

For more information about the icons in the menu, refer to the "Display area" section  
→ [48](#)

### Status area

The following appears in the status area of the navigation view in the top right corner:

- In the submenu
  - The direct access code for the parameter you are navigating to (e.g. 0022-1)
  - If a diagnostic event is present, the diagnostic behavior and status signal
- In the wizard
  - If a diagnostic event is present, the diagnostic behavior and status signal

■ For information on the diagnostic behavior and status signal → [145](#)  
 ■ For information on the function and entry of the direct access code → [53](#)

### Display area

#### Menus

Symbol	Meaning
	<b>Operation</b> Appears: <ul style="list-style-type: none"> <li>■ In the menu next to the "Operation" selection</li> <li>■ At the left in the navigation path in the <b>Operation</b> menu</li> </ul>
	<b>Setup</b> Appears: <ul style="list-style-type: none"> <li>■ In the menu next to the "Setup" selection</li> <li>■ At the left in the navigation path in the <b>Setup</b> menu</li> </ul>
	<b>Diagnostics</b> Appears: <ul style="list-style-type: none"> <li>■ In the menu next to the "Diagnostics" selection</li> <li>■ At the left in the navigation path in the <b>Diagnostics</b> menu</li> </ul>
	<b>Expert</b> Appears: <ul style="list-style-type: none"> <li>■ In the menu next to the "Expert" selection</li> <li>■ At the left in the navigation path in the <b>Expert</b> menu</li> </ul>

#### Submenus, wizards, parameters

Symbol	Meaning
	Submenu
	Wizard
	Parameters within a wizard No display symbol exists for parameters in submenus.

*Locking*

Symbol	Meaning
	<b>Parameter locked</b> When displayed in front of a parameter name, indicates that the parameter is locked. <ul style="list-style-type: none"> <li>▪ By a user-specific access code</li> <li>▪ By the hardware write protection switch</li> </ul>

*Wizard operation*

Symbol	Meaning
	Switches to the previous parameter.
	Confirms the parameter value and switches to the next parameter.
	Opens the editing view of the parameter.

**8.3.3 Editing view**

Numeric editor	Text editor
<p>1 Editing view            2 Display area of the entered values            3 Input mask            4 Operating elements → 51</p> <p>A0013941</p>	<p>1            2 User            3            4</p> <p>A0013999</p>
1 Editing view 2 Display area of the entered values 3 Input mask 4 Operating elements → 51	

**Input mask**

The following input symbols are available in the input mask of the numeric and text editor:

*Numeric editor*

Symbol	Meaning
	Selection of numbers from 0 to 9.
	Inserts decimal separator at the input position.
	Inserts minus sign at the input position.
	Confirms selection.
	Moves the input position one position to the left.

	Exits the input without applying the changes.
	Clears all entered characters.

*Text editor*

Symbol	Meaning
	Toggle <ul style="list-style-type: none"> <li>▪ Between upper-case and lower-case letters</li> <li>▪ For entering numbers</li> <li>▪ For entering special characters</li> </ul>
 ... 	Selection of letters from A to Z.
 ... 	Selection of letters from a to z.
 ... 	Selection of special characters.
	Confirms selection.
	Switches to the selection of the correction tools.
	Exits the input without applying the changes.
	Clears all entered characters.

*Correction symbols under* 

Symbol	Meaning
	Clears all entered characters.
	Moves the input position one position to the right.
	Moves the input position one position to the left.
	Deletes one character immediately to the left of the input position.

### 8.3.4 Operating elements

Key	Meaning
	<p><b>Minus key</b>  <i>In a menu, submenu</i>      Moves the selection bar upwards in a choose list.  <i>With a Wizard</i>      Confirms the parameter value and goes to the previous parameter.  <i>With a text and numeric editor</i>      In the input mask, moves the selection bar to the left (backwards).</p>
	<p><b>Plus key</b>  <i>In a menu, submenu</i>      Moves the selection bar downwards in a choose list.  <i>With a Wizard</i>      Confirms the parameter value and goes to the next parameter.  <i>With a text and numeric editor</i>      Moves the selection bar to the right (forwards) in an input screen.</p>
	<p><b>Enter key</b>  <i>For operational display</i> <ul style="list-style-type: none"> <li>▪ Pressing the key briefly opens the operating menu.</li> <li>▪ Pressing the key for 2 s opens the context menu.</li> </ul> <i>In a menu, submenu</i> <ul style="list-style-type: none"> <li>▪ Pressing the key briefly:           <ul style="list-style-type: none"> <li>– Opens the selected menu, submenu or parameter.</li> <li>– Starts the wizard.</li> <li>– If help text is open, closes the help text of the parameter.</li> </ul> </li> <li>▪ Pressing the key for 2 s for parameter:           <ul style="list-style-type: none"> <li>If present, opens the help text for the function of the parameter.</li> </ul> </li> </ul> <i>With a Wizard</i>      Opens the editing view of the parameter.  <i>With a text and numeric editor</i> <ul style="list-style-type: none"> <li>▪ Pressing the key briefly:           <ul style="list-style-type: none"> <li>– Opens the selected group.</li> <li>– Carries out the selected action.</li> </ul> </li> <li>▪ Pressing the key for 2 s confirms the edited parameter value.</li> </ul> </p>
	<p><b>Escape key combination (press keys simultaneously)</b>  <i>In a menu, submenu</i> <ul style="list-style-type: none"> <li>▪ Pressing the key briefly:           <ul style="list-style-type: none"> <li>– Exits the current menu level and takes you to the next higher level.</li> <li>– If help text is open, closes the help text of the parameter.</li> </ul> </li> <li>▪ Pressing the key for 2 s returns you to the operational display ("home position").</li> </ul> <i>With a Wizard</i>      Exits the wizard and takes you to the next higher level.  <i>With a text and numeric editor</i>      Closes the text or numeric editor without applying changes.</p>
	<p><b>Minus/Enter key combination (press the keys simultaneously)</b>      Reduces the contrast (brighter setting).</p>
	<p><b>Plus/Enter key combination (press and hold down the keys simultaneously)</b>      Increases the contrast (darker setting).</p>
	<p><b>Minus/Plus/Enter key combination (press the keys simultaneously)</b>  <i>For operational display</i>      Enables or disables the keypad lock (only SD02 display module).</p>

### 8.3.5 Opening the context menu

Using the context menu, the user can call up the following menus quickly and directly from the operational display:

- Setup
- Data backup
- Simulation

#### Calling up and closing the context menu

The user is in the operational display.

1. Press  for 2 s.  
↳ The context menu opens.

A0017421-EN

2. Press  +  simultaneously.  
↳ The context menu is closed and the operational display appears.

#### Calling up the menu via the context menu

1. Open the context menu.
2. Press  to navigate to the desired menu.
3. Press  to confirm the selection.  
↳ The selected menu opens.

### 8.3.6 Navigating and selecting from list

Different operating elements are used to navigate through the operating menu. The navigation path is displayed on the left in the header. Icons are displayed in front of the individual menus. These icons are also shown in the header during navigation.

 For an explanation of the navigation view with symbols and operating elements  
→ 47

Example: Setting the number of displayed measured values to "2 values"

A0029562-EN

### 8.3.7 Calling the parameter directly

A parameter number is assigned to every parameter to be able to access a parameter directly via the onsite display. Entering this access code in the **Direct access** parameter calls up the desired parameter directly.

#### Navigation path

Expert → Direct access

The direct access code consists of a 4-digit number and the channel number, which identifies the channel of a process variable: e.g. 0914-1. In the navigation view, this appears on the right-hand side in the header of the selected parameter.

1 Direct access code

Note the following when entering the direct access code:

- The leading zeros in the direct access code do not have to be entered.  
Example: Input of **"914"** instead of **"0914"**
- If no channel number is entered, channel 1 is jumped to automatically.  
Example: Enter **0914** → **Assign process variable** parameter
- If a different channel is jumped to: Enter the direct access code with the corresponding channel number.  
Example: Enter **0914-2** → **Assign process variable** parameter

 For the direct access codes of the individual parameters, see the "Description of Device Parameters" document for the device

### 8.3.8 Calling up help text

Help text is available for some parameters and can be called up from the navigation view. The help text provides a brief explanation of the parameter function and thereby supports swift and safe commissioning.

#### Calling up and closing the help text

The user is in the navigation view and the selection bar is on a parameter.

1. Press **■** for 2 s.  
↳ The help text for the selected parameter opens.

 20 Example: Help text for parameter "Enter access code"

2. Press **■** + **⊕** simultaneously.  
↳ The help text is closed.

### 8.3.9 Changing the parameters

**i** For a description of the editing display - consisting of text editor and numeric editor - with symbols → 49, for a description of the operating elements → 51

**Example:** Changing the tag name in the "Tag description" parameter from 001-FT-101 to 001-FT-102

A0029563-EN

A message is displayed if the value entered is outside the permitted value range.

### 8.3.10 User roles and related access authorization

The two user roles "Operator" and "Maintenance" have different write access to the parameters if the customer defines a user-specific access code. This protects the device configuration via the local display from unauthorized access → 126.

*Access authorization to parameters: "Operator" user role*

Access code status	Read access	Write access
An access code has not yet been defined (factory setting).	✓	✓
After an access code has been defined.	✓	-- <sup>1)</sup>

- 1) Despite the defined access code, certain parameters can always be modified and thus are excepted from the write protection, as they do not affect the measurement. Refer to the "Write protection via access code" section

*Access authorization to parameters: "Maintenance" user role*

Access code status	Read access	Write access
An access code has not yet been defined (factory setting).	✓	✓
After an access code has been defined.	✓	✓ <sup>1)</sup>

- 1) If an incorrect access code is entered, the user obtains the access rights of the "Operator" user role.

**i** The user role with which the user is currently logged on is indicated by the **Access status** parameter. Navigation path: Operation → Access status

### 8.3.11 Disabling write protection via access code

If the -symbol appears on the local display in front of a parameter, the parameter is write-protected by a user-specific access code and its value cannot be changed at the moment using local operation → 126.

Parameter write protection via local operation can be disabled by entering the user-specific access code in the **Enter access code** parameter (→ 110) via the respective access option.

1. After you press , the input prompt for the access code appears.
2. Enter the access code.  
↳ The -symbol in front of the parameters disappears; all previously write-protected parameters are now re-enabled.

### 8.3.12 Enabling and disabling the keypad lock

The keypad lock makes it possible to block access to the entire operating menu via local operation. As a result, it is no longer possible to navigate through the operating menu or change the values of individual parameters. Users can only read the measured values on the operational display.

### Local operation with touch control

The keypad lock is switched on and off via the context menu.

#### *Switching on the keypad lock*

The keypad lock is switched on automatically:

- Each time the device is restarted.
- If the device has not been operated for longer than one minute in the measured value display.

1. The device is in the measured value display.

Press  for at least 2 seconds.

↳ A context menu appears.

2. In the context menu, select the **Keylock on** option.

↳ The keypad lock is switched on.

 If the user attempts to access the operating menu while the keypad lock is active, the message **Keylock on** appears.

#### *Switching off the keypad lock*

1. The keypad lock is switched on.

Press  for at least 2 seconds.

↳ A context menu appears.

2. In the context menu, select the **Keylock off** option.

↳ The keypad lock is switched off.

## 8.4 Access to the operating menu via the Web browser

### 8.4.1 Function range

Thanks to the integrated Web server, the device can be operated and configured via a Web browser and via a service interface (CDI-RJ45) or a WLAN interface. The structure of the operating menu is the same as for the local display. In addition to the measured values, status information on the device is also displayed and allows the user to monitor the status of the device. Furthermore the measuring device data can be managed and the network parameters can be configured. The WLAN connection requires a device that acts as an access point to enable communication via a computer or mobile handheld terminal.

 For additional information on the Web server, refer to the Special Documentation for the device →  199

### 8.4.2 Prerequisites

#### *Computer hardware*

Hardware	Interface	
	CDI-RJ45	WLAN
Interface	The computer must have an RJ45 interface.	The operating unit must have a WLAN interface.
Connection	Standard Ethernet cable with RJ45 connector.	Connection via Wireless LAN.
Screen	Recommended size: ≥12" (depends on the screen resolution)	

*Computer software*

Software	Interface	
	CDI-RJ45	WLAN
Recommended operating systems	<ul style="list-style-type: none"> <li>▪ Microsoft Windows 7 or higher.</li> <li>▪ Mobile operating systems:           <ul style="list-style-type: none"> <li>- iOS</li> <li>- Android</li> </ul> </li> </ul> <p> Microsoft Windows XP is supported.</p>	
Web browsers supported	<ul style="list-style-type: none"> <li>▪ Microsoft Internet Explorer 8 or higher</li> <li>▪ Microsoft Edge</li> <li>▪ Mozilla Firefox</li> <li>▪ Google Chrome</li> <li>▪ Safari</li> </ul>	

*Computer settings*

Settings	Interface	
	CDI-RJ45	WLAN
User rights	Appropriate user rights (e.g. administrator rights) for TCP/IP and proxy server settings are necessary (for adjusting the IP address, subnet mask etc.).	
Proxy server settings of the Web browser	The Web browser setting <i>Use a Proxy Server for Your LAN</i> must be <b>deselected</b> .	
JavaScript	<p>JavaScript must be enabled.</p> <p> If JavaScript cannot be enabled: enter <a href="http://192.168.1.212/basic.html">http://192.168.1.212/basic.html</a> in the address line of the Web browser. A fully functional but simplified version of the operating menu structure starts in the Web browser.</p> <p> When installing a new firmware version: To enable correct data display, clear the temporary memory (cache) of the Web browser under <b>Internet options</b>.</p>	
Network connections	Only the active network connections to the measuring device should be used.	
	Switch off all other network connections such as WLAN.	Switch off all other network connections.

 In the event of connection problems: → [142](#)

*Measuring device*

Device	Interface	
	CDI-RJ45	WLAN
Measuring device	The measuring device has an RJ45 interface.	<p>The measuring device has a WLAN antenna:</p> <ul style="list-style-type: none"> <li>▪ Transmitter with integrated WLAN antenna</li> <li>▪ Transmitter with external WLAN antenna</li> </ul>
Web server	<p>Web server must be enabled; factory setting: ON</p> <p> For information on enabling the Web server → <a href="#">62</a></p>	<p>Web server and WLAN must be enabled; factory setting: ON</p> <p> For information on enabling the Web server → <a href="#">62</a></p>

### 8.4.3 Establishing a connection

#### Via service interface (CDI-RJ45)

*Configuring the Internet protocol of the computer*

The following information refers to the default Ethernet settings of the device.

IP address of the device: 192.168.1.212 (factory setting)

1. Switch on the measuring device.
2. Connect to the computer using a cable →  64.
3. If a 2nd network card is not used, close all the applications on the notebook.
  - ↳ Applications requiring Internet or a network, such as e-mail, SAP applications, Internet or Windows Explorer.
4. Close any open Internet browsers.
5. Configure the properties of the Internet protocol (TCP/IP) as defined in the table:

IP address	192.168.1.XXX; for XXX all numerical sequences except: 0, 212 and 255 → e.g. 192.168.1.213
Subnet mask	255.255.255.0
Default gateway	192.168.1.212 or leave cells empty

#### Via WLAN interface

*Configuring the Internet protocol of the operating unit*

##### NOTICE

If the WLAN connection is lost during the configuration, settings made may be lost.

- Make sure that the WLAN connection is not disconnected while configuring the device.

##### NOTICE

In principle, avoid simultaneous access to the measuring device via the service interface (CDI-RJ45) and the WLAN interface from the same operating unit. This could cause a network conflict.

- Only activate one service interface (CDI-RJ45 service interface or WLAN interface).
- If simultaneous communication is necessary: configure different IP address ranges, e.g. 192.168.0.1 (WLAN interface) and 192.168.1.212 (CDI-RJ45 service interface).

#### Preparation

- Enable WLAN reception on the operating unit.

#### Establishing a connection

1. Select the measuring device using the SSID (e.g. EH\_Promass\_300\_A802000).

2. If necessary, select the WPA2 encryption method.

3. Enter the password: serial number of the measuring device ex-works (e.g. L100A802000).

- ↳ LED on display module flashes: it is now possible to operate the measuring device with the Web browser, FieldCare or DeviceCare.

 The serial number can be found on the nameplate.

#### Disconnecting

- Once the configuration is completed, disconnect the WLAN connection between the operating unit and the measuring device.

### Starting the Web browser

- 1 Start the Web browser on the computer.
  - 2 Enter the IP address of the Web server in the address line of the Web browser:  
192.168.1.212
- ↳ The login page appears.

A0029417

- 1 Picture of device
- 2 Device name
- 3 Device tag (→ 76)
- 4 Status signal
- 5 Current measured values
- 6 Operating language
- 7 User role
- 8 Access code
- 9 Login
- 10 Reset access code (→ 122)

**i** If a login page does not appear, or if the page is incomplete → 142

#### 8.4.4 Logging on

- 1 Select the preferred operating language for the Web browser.
- 2 Enter the user-specific access code.
- 3 Press **OK** to confirm your entry.

Access code	0000 (factory setting); can be changed by customer
-------------	--

**i** If no action is performed for 10 minutes, the Web browser automatically returns to the login page.

## 8.4.5 User interface

- 1 Function row
- 2 Operating language
- 3 Navigation area

### Header

The following information appears in the header:

- Device tag
- Device status with status signal → [148](#)
- Current measured values

### Function row

Functions	Meaning
Measured values	Displays the measured values of the measuring device
Menu	<ul style="list-style-type: none"> <li>■ Access to the operating menu from the measuring device</li> <li>■ The structure of the operating menu is the same as for the local display</li> </ul> <p> For detailed information on the structure of the operating menu, see the Operating Instructions for the measuring device</p>
Device status	Displays the diagnostic messages currently pending, listed in order of priority
Data management	<ul style="list-style-type: none"> <li>■ Data exchange between PC and measuring device: <ul style="list-style-type: none"> <li>- Load the configuration from the measuring device (XML format, save configuration)</li> <li>- Save the configuration to the measuring device (XML format, restore configuration)</li> <li>- Export the event list (.csv file)</li> <li>- Export parameter settings (.csv file, create documentation of the measuring point configuration)</li> <li>- Export the Heartbeat verification log (PDF file, only available with the "Heartbeat Verification" application package)</li> </ul> </li> <li>■ If using fieldbuses, upload device drivers for system integration from the measuring device: HART: DD file</li> <li>■ Flashing a firmware version</li> </ul>
Network configuration	Configuration and checking of all the parameters required for establishing the connection to the measuring device: <ul style="list-style-type: none"> <li>■ Network settings (e.g. IP address, MAC address)</li> <li>■ Device information (e.g. serial number, firmware version)</li> </ul>
Logout	End the operation and call up the login page

### Navigation area

If a function is selected in the function bar, the submenus of the function open in the navigation area. The user can now navigate through the menu structure.

### Working area

Depending on the selected function and the related submenus, various actions can be performed in this area:

- Configuring parameters
- Reading measured values
- Calling up help text
- Starting an upload/download

### 8.4.6 Disabling the Web server

The Web server of the measuring device can be switched on and off as required using the **Web server functionality** parameter.

#### Navigation

"Expert" menu → Communication → Web server

#### Parameter overview with brief description

Parameter	Description	Selection	Factory setting
Web server functionality	Switch the Web server on and off.	<ul style="list-style-type: none"> <li>▪ Off</li> <li>▪ On</li> </ul>	On

#### Function scope of the "Web server functionality" parameter

Option	Description
Off	<ul style="list-style-type: none"> <li>▪ The web server is completely disabled.</li> <li>▪ Port 80 is locked.</li> </ul>
On	<ul style="list-style-type: none"> <li>▪ The complete functionality of the web server is available.</li> <li>▪ JavaScript is used.</li> <li>▪ The password is transferred in an encrypted state.</li> <li>▪ Any change to the password is also transferred in an encrypted state.</li> </ul>

#### Enabling the Web server

If the Web server is disabled it can only be re-enabled with the **Web server functionality** parameter via the following operating options:

- Via local display
- Via Bedientool "FieldCare"
- Via "DeviceCare" operating tool

### 8.4.7 Logging out

 Before logging out, perform a data backup via the **Data management** function (upload configuration from device) if necessary.

1. Select the **Logout** entry in the function row.  
↳ The home page with the Login box appears.
2. Close the Web browser.
3. Reset the modified properties of the Internet protocol (TCP/IP) if they are no longer needed →  59.

## 8.5 Access to the operating menu via the operating tool

The structure of the operating menu in the operating tools is the same as for operation via the local display.

### 8.5.1 Connecting the operating tool

#### Via HART protocol

This communication interface is available in device versions with a HART output.

A0028747

21 Options for remote operation via HART protocol (active)

- 1 Control system (e.g. PLC)
- 2 Field Communicator 475
- 3 Computer with Web browser (e.g. Internet Explorer) for accessing the integrated device Web server or computer with operating tool (e.g. FieldCare, DeviceCare, AMS Device Manager, SIMATIC PDM) with COM DTM "CDI Communication TCP/IP"
- 4 Commubox FXA195 (USB)
- 5 Field Xpert SFX350 or SFX370
- 6 VIATOR Bluetooth modem with connecting cable
- 7 Transmitter

A0028746

22 Options for remote operation via HART protocol (passive)

- 1 Control system (e.g. PLC)
- 2 Transmitter power supply unit, e.g. RN221N (with communication resistor)
- 3 Connection for Commubox FXA195 and Field Communicator 475
- 4 Field Communicator 475
- 5 Computer with Web browser (e.g. Internet Explorer) for accessing the integrated device Web server or computer with operating tool (e.g. FieldCare, DeviceCare, AMS Device Manager, SIMATIC PDM) with COM DTM "CDI Communication TCP/IP"
- 6 Commubox FXA195 (USB)
- 7 Field Xpert SFX350 or SFX370
- 8 VIATOR Bluetooth modem with connecting cable
- 9 Transmitter

### Service interface

Via service interface (CDI-RJ45)

Fig. 23 Connection via service interface (CDI-RJ45)

- 1 Computer with Web browser (e.g. Microsoft Internet Explorer, Microsoft Edge) for accessing the integrated device Web server or with "FieldCare", "DeviceCare" operating tool with COM DTM "CDI Communication TCP/IP"
- 2 Standard Ethernet connecting cable with RJ45 connector
- 3 Service interface (CDI-RJ45) of the measuring device with access to the integrated Web server

### Via WLAN interface

The optional WLAN interface is available on the following device version:

Order code for "Display; operation", option **G** "4-line, backlit, graphic display; touch control + WLAN"

- 1 Transmitter with integrated WLAN antenna
- 2 Transmitter with external WLAN antenna
- 3 LED lit constantly: WLAN reception is enabled on measuring device
- 4 LED flashing: WLAN connection established between operating unit and measuring device
- 5 Computer with WLAN interface and Web browser (e.g. Microsoft Internet Explorer, Microsoft Edge) for accessing the integrated device Web server or with operating tool (e.g. FieldCare, DeviceCare)
- 6 Mobile handheld terminal with WLAN interface and Web browser (e.g. Microsoft Internet Explorer, Microsoft Edge) for accessing the integrated device Web server or operating tool (e.g. FieldCare, DeviceCare)

<b>Wireless LAN</b>	IEEE 802.11 b/g (2.4 GHz) WLAN
<b>Encryption</b>	WPA2 PSK/TWIP AES-128
<b>Configurable channels</b>	1 to 11
<b>Function</b>	Access point with DHCP

Range with integrated antenna	Max. 10 m (32 ft)
Range with external antenna	Max. 50 m (164 ft)

*Configuring the Internet protocol of the operating unit*

**NOTICE**

If the WLAN connection is lost during the configuration, settings made may be lost.

- ▶ Make sure that the WLAN connection is not disconnected while configuring the device.

**NOTICE**

In principle, avoid simultaneous access to the measuring device via the service interface (CDI-RJ45) and the WLAN interface from the same operating unit. This could cause a network conflict.

- ▶ Only activate one service interface (CDI-RJ45 service interface or WLAN interface).
- ▶ If simultaneous communication is necessary: configure different IP address ranges, e.g. 192.168.0.1 (WLAN interface) and 192.168.1.212 (CDI-RJ45 service interface).

*Preparation*

- ▶ Enable WLAN reception on the operating unit.

*Establishing a connection*

1. Select the measuring device using the SSID (e.g. EH\_Promass\_300\_A802000).
2. If necessary, select the WPA2 encryption method.
3. Enter the password: serial number of the measuring device ex-works (e.g. L100A802000).
  - ↳ LED on display module flashes: it is now possible to operate the measuring device with the Web browser, FieldCare or DeviceCare.

 The serial number can be found on the nameplate.

*Disconnecting*

- ▶ Once the configuration is completed, disconnect the WLAN connection between the operating unit and the measuring device.

## 8.5.2 Field Xpert SFX350, SFX370

### Function scope

Field Xpert SFX350 and Field Xpert SFX370 are mobile computers for commissioning and maintenance. They enable efficient device configuration and diagnostics for HART and FOUNDATION fieldbus devices in the **non-Ex area** (SFX350, SFX370) and the **Ex area** (SFX370).

 For details, see Operating Instructions BA01202S

### Source for device description files

See data →  69

### 8.5.3 FieldCare

#### Function scope

FDT-based plant asset management tool from Endress+Hauser. It can configure all smart field devices in a system and helps you manage them. By using the status information, it is also a simple but effective way of checking their status and condition.

Access is via:

- HART protocol
- CDI-RJ45 service interface →  64
- WLAN interface →  64

Typical functions:

- Configuring parameters of transmitters
- Loading and saving device data (upload/download)
- Documentation of the measuring point
- Visualization of the measured value memory (line recorder) and event logbook

 For additional information about FieldCare, see Operating Instructions BA00027S and BA00059S

#### Source for device description files

See information →  69

#### Establishing a connection

1. Start FieldCare and launch the project.
2. In the network: Add a device.  
↳ The **Add device** window opens.
3. Select the **CDI Communication TCP/IP** option from the list and press **OK** to confirm.
4. Right-click **CDI Communication TCP/IP** and select the **Add device** option in the context menu that opens.
5. Select the desired device from the list and press **OK** to confirm.  
↳ The **CDI Communication TCP/IP (Configuration)** window opens.
6. Enter the device address in the **IP address** field: 192.168.1.212 and press **Enter** to confirm.
7. Establish the online connection to the device.

 For additional information, see Operating Instructions BA00027S and BA00059S

### User interface

A0021051-EN

- 1** Header
- 2** Picture of device
- 3** Device name
- 4** Tag name
- 5** Status area with status signal → [148](#)
- 6** Display area for current measured values
- 7** Edit toolbar with additional functions such as save/restore, event list and create documentation
- 8** Navigation area with operating menu structure
- 9** Working area
- 10** Range of action
- 11** Status area

### 8.5.4 DeviceCare

#### Function scope

Tool to connect and configure Endress+Hauser field devices.

The fastest way to configure Endress+Hauser field devices is with the dedicated "DeviceCare" tool. Together with the device type managers (DTMs) it presents a convenient, comprehensive solution.

For details, see Innovation Brochure IN01047S

#### Source for device description files

See information → [69](#)

### 8.5.5 AMS Device Manager

#### Function scope

Program from Emerson Process Management for operating and configuring measuring devices via HART protocol.

**Source for device description files**

See data →  69

### **8.5.6 SIMATIC PDM**

**Function scope**

SIMATIC PDM is a standardized, manufacturer-independent program from Siemens for the operation, configuration, maintenance and diagnosis of intelligent field devices via HART protocol.

**Source for device description files**

See data →  69

### **8.5.7 Field Communicator 475**

**Function scope**

Industrial handheld terminal from Emerson Process Management for remote configuration and measured value display via HART protocol.

**Source for device description files**

See data →  69

## 9 System integration

### 9.1 Overview of device description files

#### 9.1.1 Current version data for the device

Firmware version	01.00.zz	<ul style="list-style-type: none"> <li>▪ On the title page of the Operating instructions</li> <li>▪ On the transmitter nameplate</li> <li>▪ Firmware version Diagnostics → Device information → Firmware version</li> </ul>
Release date of firmware version	08.2016	---
Manufacturer ID	0x11	Manufacturer ID Diagnostics → Device information → Manufacturer ID
Device type ID	0x3B	Device type Diagnostics → Device information → Device type
HART protocol revision	7	---
Device revision	1	<ul style="list-style-type: none"> <li>▪ On the transmitter nameplate</li> <li>▪ Device revision Diagnostics → Device information → Device revision</li> </ul>

 For an overview of the different firmware versions for the device →  161

#### 9.1.2 Operating tools

The suitable device description file for the individual operating tools is listed in the table below, along with information on where the file can be acquired.

Operating tool via HART protocol	Sources for obtaining device descriptions
FieldCare	<ul style="list-style-type: none"> <li>▪ <a href="http://www.endress.com">www.endress.com</a> → Download Area</li> <li>▪ CD-ROM (contact Endress+Hauser)</li> <li>▪ DVD (contact Endress+Hauser)</li> </ul>
DeviceCare	<ul style="list-style-type: none"> <li>▪ <a href="http://www.endress.com">www.endress.com</a> → Download Area</li> <li>▪ CD-ROM (contact Endress+Hauser)</li> <li>▪ DVD (contact Endress+Hauser)</li> </ul>
<ul style="list-style-type: none"> <li>▪ Field Xpert SFX350</li> <li>▪ Field Xpert SFX370</li> </ul>	Use update function of handheld terminal
AMS Device Manager (Emerson Process Management)	<a href="http://www.endress.com">www.endress.com</a> → Download Area
SIMATIC PDM (Siemens)	<a href="http://www.endress.com">www.endress.com</a> → Download Area
Field Communicator 475 (Emerson Process Management)	Use update function of handheld terminal

### 9.2 Measured variables via HART protocol

The following measured variables (HART device variables) are assigned to the dynamic variables at the factory:

Dynamic variables	Measured variables (HART device variables)
Primary dynamic variable (PV)	Mass flow
Secondary dynamic variable (SV)	Totalizer 1
Tertiary dynamic variable (TV)	Density
Quaternary dynamic variable (QV)	Temperature

The assignment of the measured variables to the dynamic variables can be modified and assigned as desired via local operation and the operating tool using the following parameters:

- Expert → Communication → HART output → Output → Assign PV
- Expert → Communication → HART output → Output → Assign SV
- Expert → Communication → HART output → Output → Assign TV
- Expert → Communication → HART output → Output → Assign QV

The following measured variables can be assigned to the dynamic variables:

#### Measured variables for PV (primary dynamic variable)

- Off
- Mass flow
- Volume flow
- Corrected volume flow
- Density
- Reference density
- Temperature
- Electronic temperature
- Oscillation frequency 0
- Frequency fluctuation 0
- Oscillation damping 0
- Oscillation damping fluctuation 0
- Signal asymmetry
- Exciter current 0

#### Measured variables for SV, TV, QV (secondary, tertiary and quaternary dynamic variable)

- Mass flow
- Volume flow
- Corrected volume flow
- Density
- Reference density
- Temperature
- Electronic temperature
- Totalizer 1...3

 The range of options increases if the measuring device has one or more application packages.

#### Heartbeat Technology Application Package

Additional measured variables are available with the Heartbeat Technology application package:

- HBSI
- Carrier pipe temperature

#### Device variables

The device variables are permanently assigned. A maximum of 8 device variables can be transmitted:

- 0 = mass flow
- 1 = volume flow
- 2 = corrected volume flow
- 3 = density

- 4 = reference density
- 5 = temperature
- 6 = totalizer 1
- 7 = totalizer 2
- 8 = totalizer 3
- 9 = dynamic viscosity
- 10 = kinematic viscosity
- 11 = temp. compensated dynamic viscosity
- 12 = temp. compensated kinematic viscosity
- 13 = target mass flow
- 14 = carrier mass flow
- 15 = concentration

## 9.3 Other settings

### 9.3.1 Burst mode functionality in accordance with HART 7 Specification

#### Navigation

"Expert" menu → Communication → HART output → Burst configuration → Burst configuration 1 to n

Min. update period	→  73
Max. update period	→  73

### Parameter overview with brief description

Parameter	Description	Selection / User entry	Factory setting
Burst mode 1 to n	Activate the HART burst mode for burst message X.	<ul style="list-style-type: none"> <li>■ Off</li> <li>■ On</li> </ul>	Off
Burst command 1 to n	Select the HART command that is sent to the HART master.	<ul style="list-style-type: none"> <li>■ Command 1</li> <li>■ Command 2</li> <li>■ Command 3</li> <li>■ Command 9</li> <li>■ Command 33</li> <li>■ Command 48</li> </ul>	Command 2
Burst variable 0	For HART command 9 and 33, assign a HART device variable or process variable to burst variable.	<ul style="list-style-type: none"> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> <li>■ Target mass flow *</li> <li>■ Carrier mass flow *</li> <li>■ Density</li> <li>■ Reference density</li> <li>■ Concentration *</li> <li>■ Dynamic viscosity *</li> <li>■ Kinematic viscosity *</li> <li>■ Temp. compensated dynamic viscosity *</li> <li>■ Temp. compensated kinematic viscosity *</li> <li>■ Temperature</li> <li>■ Totalizer 1</li> <li>■ Totalizer 2</li> <li>■ Totalizer 3</li> <li>■ HBSI *</li> <li>■ HART input</li> <li>■ Percent of range</li> <li>■ Measured current</li> <li>■ Primary variable (PV)</li> <li>■ Secondary variable (SV)</li> <li>■ Tertiary variable (TV)</li> <li>■ Quaternary variable (QV)</li> <li>■ Not used</li> </ul>	Volume flow
Burst variable 1	For HART command 9 and 33, assign a HART device variable or process variable to burst variable.	See the <b>Burst variable 0</b> parameter.	Not used
Burst variable 2	For HART command 9 and 33, assign a HART device variable or process variable to burst variable.	See the <b>Burst variable 0</b> parameter.	Not used
Burst variable 3	For HART command 9 and 33, assign a HART device variable or process variable to burst variable.	See the <b>Burst variable 0</b> parameter.	Not used
Burst variable 4	For HART command 33, assign a HART device variable or process variable to burst variable.	See the <b>Burst variable 0</b> parameter.	Not used
Burst variable 5	For HART command 33, assign a HART device variable or process variable to burst variable.	See the <b>Burst variable 0</b> parameter.	Not used
Burst variable 6	For HART command 33, assign a HART device variable or process variable to burst variable.	See the <b>Burst variable 0</b> parameter.	Not used

Parameter	Description	Selection / User entry	Factory setting
Burst variable 7	For HART command 33, assign a HART device variable or process variable to burst variable.	See the <b>Burst variable 0</b> parameter.	Not used
Burst trigger mode	Select the event that triggers burst message X.	<ul style="list-style-type: none"> <li>▪ Continuous</li> <li>▪ Window</li> <li>▪ Rising</li> <li>▪ Falling</li> <li>▪ On change</li> </ul>	Continuous
Burst trigger level	Enter the burst trigger value. Together with the option selected in the <b>Burst trigger mode</b> parameter the burst trigger value determines the time of burst message X.	Positive floating-point number	-
Min. update period	Enter the minimum time span between two burst responses of one burst message.	Positive integer	1 000 ms
Max. update period	Enter the maximum time span between two burst responses of one burst message.	Positive integer	2 000 ms

\* Visibility depends on order options or device settings

## 10 Commissioning

### 10.1 Function check

Before commissioning the measuring device:

- ▶ Make sure that the post-installation and post-connection checks have been performed.
- "Post-installation check" checklist → [31](#)
- "Post-connection check" checklist → [42](#)

### 10.2 Switching on the measuring device

- ▶ After a successful function check, switch on the measuring device.
  - ↳ After a successful startup, the local display switches automatically from the startup display to the operational display.

**i** If nothing appears on the local display or a diagnostic message is displayed, refer to the section on "Diagnostics and troubleshooting" → [141](#).

### 10.3 Setting the operating language

Factory setting: English or ordered local language

[24](#) Taking the example of the local display

### 10.4 Configuring the measuring device

- The **Setup** menu with its guided wizards contains all the parameters needed for standard operation.
- Navigation to the **Setup** menu

25 Taking the example of the local display

Depending on the device version, not all submenus and parameters are available in every device. The selection can vary depending on the order code.

► Partially filled pipe detection	→  108
► Advanced setup	→  109

### 10.4.1 Defining the tag name

To enable fast identification of the measuring point within the system, you can enter a unique designation using the **Device tag** parameter and thus change the factory setting.

A0029422

26 Header of the operational display with tag name

1 Tag name

Enter the tag name in the "FieldCare" operating tool → 67

#### Navigation

"Setup" menu → Device tag

#### Parameter overview with brief description

Parameter	Description	User entry	Factory setting
Device tag	Enter the name for the measuring point.	Max. 32 characters, such as letters, numbers or special characters (e.g. @, %, /).	Promass

### 10.4.2 Setting the system units

In the **System units** submenu the units of all the measured values can be set.

Depending on the device version, not all submenus and parameters are available in every device. The selection can vary depending on the order code.

#### Navigation

"Setup" menu → System units

► System units	
Mass flow unit	→  77
Mass unit	→  77
Volume flow unit	→  77
Volume unit	→  77

Corrected volume flow unit	→  77
Corrected volume unit	→  77
Density unit	→  77
Reference density unit	→  77
Temperature unit	→  78
Pressure unit	→  78

### Parameter overview with brief description

Parameter	Description	Selection	Factory setting
Mass flow unit	Select mass flow unit.  <i>Result</i> The selected unit applies for: <ul style="list-style-type: none"><li>■ Output</li><li>■ Low flow cut off</li><li>■ Simulation process variable</li></ul>	Unit choose list	Country-specific: <ul style="list-style-type: none"><li>■ kg/h</li><li>■ lb/min</li></ul>
Mass unit	Select mass unit.	Unit choose list	Country-specific: <ul style="list-style-type: none"><li>■ kg</li><li>■ lb</li></ul>
Volume flow unit	Select volume flow unit.  <i>Result</i> The selected unit applies for: <ul style="list-style-type: none"><li>■ Output</li><li>■ Low flow cut off</li><li>■ Simulation process variable</li></ul>	Unit choose list	Country-specific: <ul style="list-style-type: none"><li>■ l/h</li><li>■ gal/min (us)</li></ul>
Volume unit	Select volume unit.	Unit choose list	Country-specific: <ul style="list-style-type: none"><li>■ l (DN &gt; 150 (6"): m<sup>3</sup>)</li><li>■ gal (us)</li></ul>
Corrected volume flow unit	Select corrected volume flow unit.  <i>Result</i> The selected unit applies for: <b>Corrected volume flow</b> parameter (→  131)	Unit choose list	Country-specific: <ul style="list-style-type: none"><li>■ NI/h</li><li>■ Sft<sup>3</sup>/min</li></ul>
Corrected volume unit	Select corrected volume unit.	Unit choose list	Country-specific: <ul style="list-style-type: none"><li>■ NI</li><li>■ Sft<sup>3</sup></li></ul>
Density unit	Select density unit.  <i>Result</i> The selected unit applies for: <ul style="list-style-type: none"><li>■ Output</li><li>■ Simulation process variable</li><li>■ Density adjustment (<b>Expert</b> menu)</li></ul>	Unit choose list	Country-specific: <ul style="list-style-type: none"><li>■ kg/l</li><li>■ lb/ft<sup>3</sup></li></ul>
Reference density unit	Select reference density unit.	Unit choose list	Country-dependent <ul style="list-style-type: none"><li>■ kg/NI</li><li>■ lb/Sft<sup>3</sup></li></ul>

Parameter	Description	Selection	Factory setting
Temperature unit	<p>Select temperature unit.</p> <p><i>Result</i></p> <p>The selected unit applies for:</p> <ul style="list-style-type: none"> <li>▪ <b>Electronic temperature</b> parameter (6053)</li> <li>▪ <b>Maximum value</b> parameter (6051)</li> <li>▪ <b>Minimum value</b> parameter (6052)</li> <li>▪ <b>External temperature</b> parameter (6080)</li> <li>▪ <b>Maximum value</b> parameter (6108)</li> <li>▪ <b>Minimum value</b> parameter (6109)</li> <li>▪ <b>Carrier pipe temperature</b> parameter (6027)</li> <li>▪ <b>Maximum value</b> parameter (6029)</li> <li>▪ <b>Minimum value</b> parameter (6030)</li> <li>▪ <b>Reference temperature</b> parameter (1816)</li> <li>▪ <b>Temperature</b> parameter</li> </ul>	Unit choose list	Country-specific: <ul style="list-style-type: none"> <li>▪ °C</li> <li>▪ °F</li> </ul>
Pressure unit	<p>Select process pressure unit.</p> <p><i>Result</i></p> <p>The unit is taken from:</p> <ul style="list-style-type: none"> <li>▪ <b>Pressure value</b> parameter (→ 80)</li> <li>▪ <b>External pressure</b> parameter (→ 80)</li> <li>▪ Pressure value</li> </ul>	Unit choose list	Country-specific: <ul style="list-style-type: none"> <li>▪ bar a</li> <li>▪ psi a</li> </ul>

### 10.4.3 Selecting and setting the medium

The **Select medium** wizard submenu contains parameters that must be configured in order to select and set the medium.

#### Navigation

"Setup" menu → Select medium

► Medium selection	
Select medium	→  80
Select gas type	→  80
Reference sound velocity	→  80
Temperature coefficient sound velocity	→  80
Pressure compensation	→  80
Pressure value	→  80
External pressure	→  80

### Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry / User interface	Factory setting
Select medium	–	Select medium type.	<ul style="list-style-type: none"> <li>▪ Liquid</li> <li>▪ Gas</li> </ul>	Liquid
Select gas type	The <b>Gas</b> option is selected in the <b>Select medium</b> parameter.	Select measured gas type.	<ul style="list-style-type: none"> <li>▪ Air</li> <li>▪ Ammonia NH<sub>3</sub></li> <li>▪ Argon Ar</li> <li>▪ Sulfur hexafluoride SF<sub>6</sub></li> <li>▪ Oxygen O<sub>2</sub></li> <li>▪ Ozone O<sub>3</sub></li> <li>▪ Nitrogen oxide NO<sub>x</sub></li> <li>▪ Nitrogen N<sub>2</sub></li> <li>▪ Nitrous oxide N<sub>2</sub>O</li> <li>▪ Methane CH<sub>4</sub></li> <li>▪ Hydrogen H<sub>2</sub></li> <li>▪ Helium He</li> <li>▪ Hydrogen chloride HCl</li> <li>▪ Hydrogen sulfide H<sub>2</sub>S</li> <li>▪ Ethylene C<sub>2</sub>H<sub>4</sub></li> <li>▪ Carbon dioxide CO<sub>2</sub></li> <li>▪ Carbon monoxide CO</li> <li>▪ Chlorine Cl<sub>2</sub></li> <li>▪ Butane C<sub>4</sub>H<sub>10</sub></li> <li>▪ Propane C<sub>3</sub>H<sub>8</sub></li> <li>▪ Propylene C<sub>3</sub>H<sub>6</sub></li> <li>▪ Ethane C<sub>2</sub>H<sub>6</sub></li> <li>▪ Others</li> </ul>	Methane CH <sub>4</sub>
Reference sound velocity	In the <b>Select gas type</b> parameter, the <b>Others</b> option is selected.	Enter sound velocity of gas at 0 °C (32 °F).	1 to 99 999.9999 m/s	415.0 m/s
Temperature coefficient sound velocity	The <b>Others</b> option is selected in the <b>Select gas type</b> parameter.	Enter temperature coefficient for the gas sound velocity.	Positive floating-point number	0 (m/s)/K
Pressure compensation	–	Select pressure compensation type.	<ul style="list-style-type: none"> <li>▪ Off</li> <li>▪ Fixed value</li> <li>▪ External value</li> <li>▪ Current input 1 *</li> <li>▪ Current input 2 *</li> </ul>	Off
Pressure value	The <b>Fixed value</b> option is selected in the <b>Pressure compensation</b> parameter.	Enter process pressure to be used for pressure correction.	Positive floating-point number	0 bar
External pressure	The <b>External value</b> option is selected in the <b>Pressure compensation</b> parameter.	Shows the external process pressure value.	Positive floating-point number	0 bar

\* Visibility depends on order options or device settings

#### 10.4.4 Displaying the I/O configuration

The **I/O configuration** submenu guides the user systematically through all the parameters in which the configuration of the I/O modules is displayed.

**Navigation****"Setup" menu → I/O configuration**

► I/O configuration	
I/O module 1 to n terminal numbers	→ 81
I/O module 1 to n information	→ 81
I/O module 1 to n type	→ 81
Apply I/O configuration	→ 81
Conversion code	→ 81

**Parameter overview with brief description**

Parameter	Description	User interface / Selection / User entry	Factory setting
I/O module 1 to n terminal numbers	Shows the terminal numbers used by the I/O module.	<ul style="list-style-type: none"> <li>■ Not used</li> <li>■ 26-27 (I/O 1)</li> <li>■ 24-25 (I/O 2)</li> <li>■ 22-23 (I/O 3)</li> </ul>	-
I/O module 1 to n information	Shows information of the plugged I/O module.	<ul style="list-style-type: none"> <li>■ Not plugged</li> <li>■ Invalid</li> <li>■ Not configurable</li> <li>■ Configurable</li> <li>■ Fieldbus</li> </ul>	-
I/O module 1 to n type	Shows the I/O module type.	<ul style="list-style-type: none"> <li>■ Off</li> <li>■ Current output*</li> <li>■ Current input*</li> <li>■ Status input*</li> <li>■ Pulse/frequency/switch output</li> </ul>	Off
Apply I/O configuration	Apply parameterization of the freely configurable I/O module.	<ul style="list-style-type: none"> <li>■ No</li> <li>■ Yes</li> </ul>	No
Conversion code	Enter the code in order to change the I/O configuration.	Positive integer	0

\* Visibility depends on order options or device settings

**10.4.5 Configuring the current input**

The **"Current input" wizard** guides the user systematically through all the parameters that have to be set for configuring the current input.

**Navigation****"Setup" menu → Current input**

► Current input 1 to n	
Terminal number	→ 82

Signal mode	→ 82
0/4 mA value	→ 82
20 mA value	→ 82
Current span	→ 82
Failure mode	→ 82
Failure value	→ 82

### Parameter overview with brief description

Parameter	Prerequisite	Description	User interface / Selection / User entry	Factory setting
Terminal number	-	Shows the terminal numbers used by the current input module.	<ul style="list-style-type: none"> <li>▪ Not used</li> <li>▪ 24-25 (I/O 2)</li> <li>▪ 22-23 (I/O 3)</li> </ul>	-
Signal mode	The measuring device is <b>not</b> approved for use in the hazardous area with type of protection Ex-i.	Select the signal mode for the current input.	<ul style="list-style-type: none"> <li>▪ Passive</li> <li>▪ Active</li> </ul>	Passive
0/4 mA value	-	Enter 4 mA value.	Signed floating-point number	0
20 mA value	-	Enter 20 mA value.	Signed floating-point number	Depends on country and nominal diameter
Current span	-	Select current range for process value output and upper/lower level for alarm signal.	<ul style="list-style-type: none"> <li>▪ 4...20 mA</li> <li>▪ 4...20 mA NAMUR</li> <li>▪ 4...20 mA US</li> <li>▪ 0...20 mA</li> </ul>	Country-specific: <ul style="list-style-type: none"> <li>▪ 4...20 mA NAMUR</li> <li>▪ 4...20 mA US</li> </ul>
Failure mode	-	Define input behavior in alarm condition.	<ul style="list-style-type: none"> <li>▪ Alarm</li> <li>▪ Last valid value</li> <li>▪ Defined value</li> </ul>	Alarm
Failure value	In the <b>Failure mode</b> parameter, the <b>Defined value</b> option is selected.	Enter value to be used by the device if input value from external device is missing.	Signed floating-point number	0

### 10.4.6 Configuring the status input

The **Status input** submenu guides the user systematically through all the parameters that have to be set for configuring the status input.

#### Navigation

"Setup" menu → Status input

► Status input 1 to n	Assign status input	→ 83
-----------------------	---------------------	------

Terminal number	→ 83
Active level	→ 83
Terminal number	→ 83
Response time status input	→ 83
Terminal number	→ 83

### Parameter overview with brief description

Parameter	Description	User interface / Selection / User entry	Factory setting
Terminal number	Shows the terminal numbers used by the status input module.	<ul style="list-style-type: none"> <li>▪ Not used</li> <li>▪ 24-25 (I/O 2)</li> <li>▪ 22-23 (I/O 3)</li> </ul>	–
Assign status input	Select function for the status input.	<ul style="list-style-type: none"> <li>▪ Off</li> <li>▪ Reset totalizer 1</li> <li>▪ Reset totalizer 2</li> <li>▪ Reset totalizer 3</li> <li>▪ Reset all totalizers</li> <li>▪ Flow override</li> </ul>	Off
Active level	Define input signal level at which the assigned function is triggered.	<ul style="list-style-type: none"> <li>▪ High</li> <li>▪ Low</li> </ul>	High
Response time status input	Define the minimum amount of time the input signal level must be present before the selected function is triggered.	5 to 200 ms	50 ms

### 10.4.7 Configuring the current output

The **Current output** wizard guides you systematically through all the parameters that have to be set for configuring the current output.

#### Navigation

"Setup" menu → Current output

20 mA value	→ 86

Fixed current	→  86
Failure mode	→  87
Failure current	→  87

### Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Assign current output 1 to n	-	Select process variable for current output.	<ul style="list-style-type: none"> <li>■ Off</li> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> <li>■ Target mass flow *</li> <li>■ Carrier mass flow *</li> <li>■ Density</li> <li>■ Reference density *</li> <li>■ Concentration *</li> <li>■ Dynamic viscosity *</li> <li>■ Kinematic viscosity *</li> <li>■ Temp. compensated dynamic viscosity *</li> <li>■ Temp. compensated kinematic viscosity *</li> <li>■ Temperature</li> <li>■ Carrier pipe temperature *</li> <li>■ Electronic temperature</li> <li>■ Oscillation frequency 0</li> <li>■ Oscillation frequency 1 *</li> <li>■ Oscillation amplitude 0 *</li> <li>■ Oscillation amplitude 1 *</li> <li>■ Frequency fluctuation 0</li> <li>■ Frequency fluctuation 1 *</li> <li>■ Oscillation damping 0</li> <li>■ Oscillation damping 1 *</li> <li>■ Oscillation damping fluctuation 0</li> <li>■ Oscillation damping fluctuation 1 *</li> <li>■ Signal asymmetry</li> <li>■ Exciter current 0</li> <li>■ Exciter current 1 *</li> <li>■ HBSI *</li> </ul>	Mass flow
Terminal number	-	Shows the terminal numbers used by the current output module.	<ul style="list-style-type: none"> <li>■ Not used</li> <li>■ 26-27 (I/O 1)</li> <li>■ 24-25 (I/O 2)</li> <li>■ 22-23 (I/O 3)</li> </ul>	-
Current span	-	Select current range for process value output and upper/lower level for alarm signal.	<ul style="list-style-type: none"> <li>■ 4...20 mA NAMUR</li> <li>■ 4...20 mA US</li> <li>■ 4...20 mA</li> <li>■ 0...20 mA</li> <li>■ Fixed current</li> </ul>	Country-specific: <ul style="list-style-type: none"> <li>■ 4...20 mA NAMUR</li> <li>■ 4...20 mA US</li> </ul>
Signal mode	-	Select the signal mode for the current output.	<ul style="list-style-type: none"> <li>■ Passive</li> <li>■ Active</li> </ul>	Passive

Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
0/4 mA value	One of the following options is selected in the <b>Current span</b> parameter (→ 85): <ul style="list-style-type: none"> <li>■ 4...20 mA NAMUR</li> <li>■ 4...20 mA US</li> <li>■ 4...20 mA</li> <li>■ 0...20 mA</li> </ul>	Enter 4 mA value.	Signed floating-point number	Country-specific: <ul style="list-style-type: none"> <li>■ 0 kg/h</li> <li>■ 0 lb/min</li> </ul>
20 mA value	One of the following options is selected in the <b>Current span</b> parameter (→ 85): <ul style="list-style-type: none"> <li>■ 4...20 mA NAMUR</li> <li>■ 4...20 mA US</li> <li>■ 4...20 mA</li> <li>■ 0...20 mA</li> </ul>	Enter 20 mA value.	Signed floating-point number	Depends on country and nominal diameter
Fixed current	In the <b>Current span</b> parameter (→ 85), the <b>Fixed current</b> option is selected.	Defines the fixed output current.	0 to 22.5 mA	22.5 mA

Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Failure mode	<p>One of the following options is selected in the <b>Assign current output</b> parameter (→ 85):</p> <ul style="list-style-type: none"> <li>▪ Mass flow</li> <li>▪ Volume flow</li> <li>▪ Corrected volume flow</li> <li>▪ Target mass flow *</li> <li>▪ Carrier mass flow *</li> <li>▪ Density</li> <li>▪ Reference density</li> <li>▪ Concentration *</li> <li>▪ Dynamic viscosity *</li> <li>▪ Kinematic viscosity *</li> <li>▪ Temp. compensated dynamic viscosity *</li> <li>▪ Temp. compensated kinematic viscosity *</li> <li>▪ Temperature</li> <li>▪ Carrier pipe temperature *</li> <li>▪ Electronic temperature</li> <li>▪ Oscillation frequency 0</li> <li>▪ Oscillation frequency 1 *</li> <li>▪ Oscillation amplitude 0 *</li> <li>▪ Oscillation amplitude 1 *</li> <li>▪ Frequency fluctuation 0</li> <li>▪ Frequency fluctuation 1 *</li> <li>▪ Oscillation damping 0</li> <li>▪ Oscillation damping 1 *</li> <li>▪ Oscillation damping fluctuation 0</li> <li>▪ Oscillation damping fluctuation 1 *</li> <li>▪ Signal asymmetry</li> <li>▪ Exciter current 0</li> <li>▪ Exciter current 1 *</li> <li>▪ HBSI *</li> </ul> <p>One of the following options is selected in the <b>Current span</b> parameter (→ 85):</p> <ul style="list-style-type: none"> <li>▪ 4...20 mA NAMUR</li> <li>▪ 4...20 mA US</li> <li>▪ 4...20 mA</li> <li>▪ 0...20 mA</li> </ul>	Define output behavior in alarm condition.	<ul style="list-style-type: none"> <li>▪ Min.</li> <li>▪ Max.</li> <li>▪ Last valid value</li> <li>▪ Actual value</li> <li>▪ Defined value</li> </ul>	Max.
Failure current	In the <b>Failure mode</b> parameter, the <b>Defined value</b> option is selected.	Enter current output value in alarm condition.	0 to 22.5 mA	22.5 mA

\* Visibility depends on order options or device settings

### 10.4.8 Configuring the pulse/frequency/switch output

The **Pulse/frequency/switch output** wizard guides you systematically through all the parameters that can be set for configuring the selected output type.

#### Navigation

"Setup" menu → Advanced setup → Pulse/frequency/switch output

#### Parameter overview with brief description

Parameter	Description	Selection	Factory setting
Operating mode	Define the output as a pulse, frequency or switch output.	<ul style="list-style-type: none"> <li>■ Pulse</li> <li>■ Frequency</li> <li>■ Switch</li> </ul>	Pulse

#### Configuring the pulse output

#### Navigation

"Setup" menu → Pulse/frequency/switch output

### Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Operating mode	–	Define the output as a pulse, frequency or switch output.	<ul style="list-style-type: none"> <li>■ Pulse</li> <li>■ Frequency</li> <li>■ Switch</li> </ul>	Pulse
Terminal number	–	Shows the terminal numbers used by the PFS output module.	<ul style="list-style-type: none"> <li>■ Not used</li> <li>■ 24-25 (I/O 2)</li> <li>■ 22-23 (I/O 3)</li> </ul>	–
Signal mode	–	Select the signal mode for the PFS output.	<ul style="list-style-type: none"> <li>■ Passive</li> <li>■ Active</li> </ul>	Passive
Assign pulse output 1 to n	In the <b>Operating mode</b> parameter, the <b>Pulse</b> option is selected.	Select process variable for pulse output.	<ul style="list-style-type: none"> <li>■ Off</li> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> <li>■ Target mass flow <sup>*</sup></li> <li>■ Carrier mass flow <sup>*</sup></li> </ul>	Off
Value per pulse	In the <b>Operating mode</b> parameter, the <b>Pulse</b> option is selected and one of the following options is selected in the <b>Assign pulse output</b> parameter (→ 89): <ul style="list-style-type: none"> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> <li>■ Target mass flow <sup>*</sup></li> <li>■ Carrier mass flow <sup>*</sup></li> </ul>	Enter measured value at which a pulse is output.	Signed floating-point number	Depends on country and nominal diameter
Pulse width	In the <b>Operating mode</b> parameter, the <b>Pulse</b> option is selected and one of the following options is selected in the <b>Assign pulse output</b> parameter (→ 89): <ul style="list-style-type: none"> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> <li>■ Target mass flow <sup>*</sup></li> <li>■ Carrier mass flow <sup>*</sup></li> </ul>	Define time width of the output pulse.	0.05 to 2 000 ms	100 ms
Failure mode	In the <b>Operating mode</b> parameter, the <b>Pulse</b> option is selected and one of the following options is selected in the <b>Assign pulse output</b> parameter (→ 89): <ul style="list-style-type: none"> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> <li>■ Target mass flow <sup>*</sup></li> <li>■ Carrier mass flow <sup>*</sup></li> </ul>	Define output behavior in alarm condition.	<ul style="list-style-type: none"> <li>■ Actual value</li> <li>■ No pulses</li> </ul>	No pulses
Invert output signal	–	Invert the output signal.	<ul style="list-style-type: none"> <li>■ No</li> <li>■ Yes</li> </ul>	No

\* Visibility depends on order options or device settings

### Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Operating mode	-	Define the output as a pulse, frequency or switch output.	<ul style="list-style-type: none"> <li>■ Pulse</li> <li>■ Frequency</li> <li>■ Switch</li> </ul>	Pulse
Terminal number	-	Shows the terminal numbers used by the PFS output module.	<ul style="list-style-type: none"> <li>■ Not used</li> <li>■ 24-25 (I/O 2)</li> <li>■ 22-23 (I/O 3)</li> </ul>	-
Signal mode	-	Select the signal mode for the PFS output.	<ul style="list-style-type: none"> <li>■ Passive</li> <li>■ Active</li> </ul>	Passive

Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Assign frequency output	In the <b>Operating mode</b> parameter (→ 88), the <b>Frequency</b> option is selected.	Select process variable for frequency output.	<ul style="list-style-type: none"> <li>■ Off</li> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> <li>■ Target mass flow *</li> <li>■ Carrier mass flow *</li> <li>■ Density</li> <li>■ Reference density</li> <li>■ Concentration *</li> <li>■ Dynamic viscosity *</li> <li>■ Kinematic viscosity *</li> <li>■ Temp. compensated dynamic viscosity *</li> <li>■ Temp. compensated kinematic viscosity *</li> <li>■ Temperature</li> <li>■ Carrier pipe temperature *</li> <li>■ Electronic temperature</li> <li>■ Oscillation frequency 0</li> <li>■ Oscillation frequency 1 *</li> <li>■ Oscillation amplitude 0 *</li> <li>■ Oscillation amplitude 1 *</li> <li>■ Frequency fluctuation 0</li> <li>■ Frequency fluctuation 1 *</li> <li>■ Oscillation damping 0</li> <li>■ Oscillation damping 1 *</li> <li>■ Oscillation damping fluctuation 0</li> <li>■ Oscillation damping fluctuation 1 *</li> <li>■ Signal asymmetry</li> <li>■ Exciter current 0</li> <li>■ Exciter current 1 *</li> <li>■ HBSI</li> </ul>	Off

Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Minimum frequency value	In the <b>Operating mode</b> parameter, the <b>Frequency</b> option is selected and one of the following options is selected in the <b>Assign frequency output</b> parameter (→ 91): <ul style="list-style-type: none"> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> <li>■ Target mass flow *</li> <li>■ Carrier mass flow *</li> <li>■ Density</li> <li>■ Reference density</li> <li>■ Concentration *</li> <li>■ Dynamic viscosity *</li> <li>■ Kinematic viscosity *</li> <li>■ Temp. compensated dynamic viscosity *</li> <li>■ Temp. compensated kinematic viscosity *</li> <li>■ Temperature</li> <li>■ Carrier pipe temperature *</li> <li>■ Electronic temperature</li> <li>■ Oscillation frequency 0</li> <li>■ Oscillation frequency 1 *</li> <li>■ Frequency fluctuation 0</li> <li>■ Frequency fluctuation 1 *</li> <li>■ Oscillation amplitude 0 *</li> <li>■ Oscillation amplitude 1 *</li> <li>■ Oscillation damping 0</li> <li>■ Oscillation damping 1 *</li> <li>■ Oscillation damping fluctuation 0</li> <li>■ Oscillation damping fluctuation 1 *</li> <li>■ Signal asymmetry</li> <li>■ Exciter current 0</li> <li>■ Exciter current 1 *</li> </ul>	Enter minimum frequency.	0.0 to 10 000.0 Hz	0.0 Hz

Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Maximum frequency value	In the <b>Operating mode</b> parameter, the <b>Frequency</b> option is selected and one of the following options is selected in the <b>Assign frequency output</b> parameter (→ 91): <ul style="list-style-type: none"> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> <li>■ Target mass flow *</li> <li>■ Carrier mass flow *</li> <li>■ Density</li> <li>■ Reference density</li> <li>■ Concentration *</li> <li>■ Dynamic viscosity *</li> <li>■ Kinematic viscosity *</li> <li>■ Temp. compensated dynamic viscosity *</li> <li>■ Temp. compensated kinematic viscosity *</li> <li>■ Temperature</li> <li>■ Carrier pipe temperature *</li> <li>■ Electronic temperature</li> <li>■ Oscillation frequency 0</li> <li>■ Oscillation frequency 1 *</li> <li>■ Frequency fluctuation 0</li> <li>■ Frequency fluctuation 1 *</li> <li>■ Oscillation amplitude 0 *</li> <li>■ Oscillation amplitude 1 *</li> <li>■ Oscillation damping 0</li> <li>■ Oscillation damping 1 *</li> <li>■ Oscillation damping fluctuation 0</li> <li>■ Oscillation damping fluctuation 1 *</li> <li>■ Signal asymmetry</li> <li>■ Exciter current 0</li> <li>■ Exciter current 1 *</li> </ul>	Enter maximum frequency.	0.0 to 10 000.0 Hz	10 000.0 Hz

Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Measuring value at minimum frequency	In the <b>Operating mode</b> parameter, the <b>Frequency</b> option is selected and one of the following options is selected in the <b>Assign frequency output</b> parameter (→ 91): <ul style="list-style-type: none"> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> <li>■ Target mass flow *</li> <li>■ Carrier mass flow *</li> <li>■ Density</li> <li>■ Reference density</li> <li>■ Concentration *</li> <li>■ Dynamic viscosity *</li> <li>■ Kinematic viscosity *</li> <li>■ Temp. compensated dynamic viscosity *</li> <li>■ Temp. compensated kinematic viscosity *</li> <li>■ Temperature</li> <li>■ Carrier pipe temperature *</li> <li>■ Electronic temperature</li> <li>■ Oscillation frequency 0</li> <li>■ Oscillation frequency 1 *</li> <li>■ Frequency fluctuation 0</li> <li>■ Frequency fluctuation 1 *</li> <li>■ Oscillation amplitude 0 *</li> <li>■ Oscillation amplitude 1 *</li> <li>■ Oscillation damping 0</li> <li>■ Oscillation damping 1 *</li> <li>■ Oscillation damping fluctuation 0</li> <li>■ Oscillation damping fluctuation 1 *</li> <li>■ Signal asymmetry</li> <li>■ Exciter current 0</li> <li>■ Exciter current 1 *</li> </ul>	Enter measured value for minimum frequency.	Signed floating-point number	Depends on country and nominal diameter

Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Measuring value at maximum frequency	In the <b>Operating mode</b> parameter, the <b>Frequency</b> option is selected and one of the following options is selected in the <b>Assign frequency output</b> parameter (→ 91): <ul style="list-style-type: none"> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> <li>■ Target mass flow *</li> <li>■ Carrier mass flow *</li> <li>■ Density</li> <li>■ Reference density *</li> <li>■ Concentration *</li> <li>■ Dynamic viscosity *</li> <li>■ Kinematic viscosity *</li> <li>■ Temp. compensated dynamic viscosity *</li> <li>■ Temp. compensated kinematic viscosity *</li> <li>■ Temperature</li> <li>■ Carrier pipe temperature *</li> <li>■ Electronic temperature</li> <li>■ Oscillation frequency 0</li> <li>■ Oscillation frequency 1 *</li> <li>■ Frequency fluctuation 0</li> <li>■ Frequency fluctuation 1 *</li> <li>■ Oscillation amplitude 0 *</li> <li>■ Oscillation amplitude 1 *</li> <li>■ Oscillation damping 0</li> <li>■ Oscillation damping 1 *</li> <li>■ Oscillation damping fluctuation 0</li> <li>■ Oscillation damping fluctuation 1 *</li> <li>■ Signal asymmetry</li> <li>■ Exciter current 0</li> <li>■ Exciter current 1 *</li> </ul>	Enter measured value for maximum frequency.	Signed floating-point number	Depends on country and nominal diameter

Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Failure mode	In the <b>Operating mode</b> parameter, the <b>Frequency</b> option is selected and one of the following options is selected in the <b>Assign frequency output</b> parameter (→ 91): <ul style="list-style-type: none"> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> <li>■ Target mass flow *</li> <li>■ Carrier mass flow *</li> <li>■ Density</li> <li>■ Reference density</li> <li>■ Concentration *</li> <li>■ Dynamic viscosity *</li> <li>■ Kinematic viscosity *</li> <li>■ Temp. compensated dynamic viscosity *</li> <li>■ Temp. compensated kinematic viscosity *</li> <li>■ Temperature</li> <li>■ Carrier pipe temperature *</li> <li>■ Electronic temperature</li> <li>■ Oscillation frequency 0</li> <li>■ Oscillation frequency 1 *</li> <li>■ Frequency fluctuation 0</li> <li>■ Frequency fluctuation 1 *</li> <li>■ Oscillation amplitude 0 *</li> <li>■ Oscillation amplitude 1 *</li> <li>■ Oscillation damping 0</li> <li>■ Oscillation damping 1 *</li> <li>■ Oscillation damping fluctuation 0</li> <li>■ Oscillation damping fluctuation 1 *</li> <li>■ Signal asymmetry</li> <li>■ Exciter current 0</li> <li>■ Exciter current 1 *</li> </ul>	Define output behavior in alarm condition.	<ul style="list-style-type: none"> <li>■ Actual value</li> <li>■ Defined value</li> <li>■ 0 Hz</li> </ul>	0 Hz

Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Failure frequency	In the <b>Operating mode</b> parameter, the <b>Frequency</b> option is selected and one of the following options is selected in the <b>Assign frequency output</b> parameter (→ 91): <ul style="list-style-type: none"> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> <li>■ Target mass flow *</li> <li>■ Carrier mass flow *</li> <li>■ Density</li> <li>■ Reference density *</li> <li>■ Concentration *</li> <li>■ Dynamic viscosity *</li> <li>■ Kinematic viscosity *</li> <li>■ Temp. compensated dynamic viscosity *</li> <li>■ Temp. compensated kinematic viscosity *</li> <li>■ Temperature</li> <li>■ Carrier pipe temperature *</li> <li>■ Electronic temperature</li> <li>■ Oscillation frequency 0</li> <li>■ Oscillation frequency 1 *</li> <li>■ Frequency fluctuation 0</li> <li>■ Frequency fluctuation 1 *</li> <li>■ Oscillation amplitude 0 *</li> <li>■ Oscillation amplitude 1 *</li> <li>■ Oscillation damping 0</li> <li>■ Oscillation damping 1 *</li> <li>■ Oscillation damping fluctuation 0</li> <li>■ Oscillation damping fluctuation 1 *</li> <li>■ Signal asymmetry</li> <li>■ Exciter current 0</li> <li>■ Exciter current 1 *</li> </ul>	Enter frequency output value in alarm condition.	0.0 to 12 500.0 Hz	0.0 Hz

#### 10.4.9 Configuring the relay output

The **Relay output** wizard guides the user systematically through all the parameters that have to be set for configuring the relay output.

##### Navigation

"Setup" menu → Relay output 1 to n

### Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Relay output function	–	Select the function for the relay output.	<ul style="list-style-type: none"> <li>■ Closed</li> <li>■ Open</li> <li>■ Diagnostic behavior</li> <li>■ Limit</li> <li>■ Flow direction check</li> <li>■ Digital Output</li> </ul>	Closed
Terminal number	–	Shows the terminal numbers used by the relay output module.	<ul style="list-style-type: none"> <li>■ Not used</li> <li>■ 24-25 (I/O 2)</li> <li>■ 22-23 (I/O 3)</li> </ul>	–
Assign flow direction check	In the <b>Relay output function</b> parameter, the <b>Flow direction check</b> option is selected.	Select process variable for flow direction monitoring.	<ul style="list-style-type: none"> <li>■ Off</li> <li>■ Volume flow</li> <li>■ Mass flow</li> <li>■ Corrected volume flow</li> </ul>	Mass flow
Assign limit	In the <b>Relay output function</b> parameter, the <b>Limit</b> option is selected.	Select process variable for limit function.	<ul style="list-style-type: none"> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> <li>■ Target mass flow *</li> <li>■ Carrier mass flow *</li> <li>■ Density</li> <li>■ Reference density *</li> <li>■ Dynamic viscosity *</li> <li>■ Concentration *</li> <li>■ Kinematic viscosity *</li> <li>■ Temp. compensated dynamic viscosity *</li> <li>■ Temp. compensated kinematic viscosity *</li> <li>■ Temperature</li> <li>■ Totalizer 1</li> <li>■ Totalizer 2</li> <li>■ Totalizer 3</li> <li>■ Oscillation damping</li> </ul>	Mass flow
Assign diagnostic behavior	In the <b>Relay output function</b> parameter, the <b>Diagnostic behavior</b> option is selected.	Select diagnostic behavior for switch output.	<ul style="list-style-type: none"> <li>■ Alarm</li> <li>■ Alarm or warning</li> <li>■ Warning</li> </ul>	Alarm
Assign status	In the <b>Relay output function</b> parameter, the <b>Digital Output</b> option is selected.	Select device status for switch output.	<ul style="list-style-type: none"> <li>■ Partially filled pipe detection</li> <li>■ Low flow cut off</li> </ul>	Partially filled pipe detection
Switch-off value	In the <b>Relay output function</b> parameter, the <b>Limit</b> option is selected.	Enter measured value for the switch-off point.	Signed floating-point number	Country-specific: <ul style="list-style-type: none"> <li>■ 0 kg/h</li> <li>■ 0 lb/min</li> </ul>
Switch-off delay	In the <b>Relay output function</b> parameter, the <b>Limit</b> option is selected.	Define delay for the switch-off of status output.	0.0 to 100.0 s	0.0 s
Switch-on value	In the <b>Relay output function</b> parameter, the <b>Limit</b> option is selected.	Enter measured value for the switch-on point.	Signed floating-point number	Country-specific: <ul style="list-style-type: none"> <li>■ 0 kg/h</li> <li>■ 0 lb/min</li> </ul>

Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Switch-on delay	In the <b>Relay output function</b> parameter, the <b>Limit</b> option is selected.	Define delay for the switch-on of status output.	0.0 to 100.0 s	0.0 s
Failure mode	-	Define output behavior in alarm condition.	<ul style="list-style-type: none"> <li>▪ Actual status</li> <li>▪ Open</li> <li>▪ Closed</li> </ul>	Open

\* Visibility depends on order options or device settings

### 10.4.10 Configuring the double pulse output

The **Double pulse output** submenu guides the user systematically through all the parameters that have to be set for configuring the double pulse output.

#### Navigation

"Setup" menu → Double pulse output

#### Parameter overview with brief description

Parameter	Description	Selection / User interface / User entry	Factory setting
Signal mode	Select the signal mode for the double pulse output.	<ul style="list-style-type: none"> <li>▪ Passive</li> <li>▪ Active</li> <li>▪ Passive NAMUR</li> </ul>	Passive
Master terminal number	Shows the terminal numbers used by the master of the double pulse output module.	<ul style="list-style-type: none"> <li>▪ Not used</li> <li>▪ 24-25 (I/O 2)</li> <li>▪ 22-23 (I/O 3)</li> </ul>	-
Slave terminal number		<ul style="list-style-type: none"> <li>▪ Not used</li> <li>▪ 24-25 (I/O 2)</li> <li>▪ 22-23 (I/O 3)</li> </ul>	-

Parameter	Description	Selection / User interface / User entry	Factory setting
Assign pulse output 1	Select process variable for pulse output.	<ul style="list-style-type: none"> <li>▪ Off</li> <li>▪ Mass flow</li> <li>▪ Volume flow</li> <li>▪ Corrected volume flow *</li> <li>▪ Target mass flow *</li> <li>▪ Carrier mass flow *</li> </ul>	Off
Measuring mode	Select measuring mode for pulse output.	<ul style="list-style-type: none"> <li>▪ Forward flow</li> <li>▪ Forward/Reverse flow</li> <li>▪ Reverse flow</li> <li>▪ Reverse flow compensation</li> </ul>	Forward flow
Value per pulse	Enter measured value at which a pulse is output.	Signed floating-point number	Depends on country and nominal diameter
Pulse width	Define time width of the output pulse.	0.5 to 2 000 ms	0.5 ms
Failure mode	Define output behavior in alarm condition.	<ul style="list-style-type: none"> <li>▪ Actual value</li> <li>▪ No pulses</li> </ul>	No pulses
Invert output signal	Invert the output signal.	<ul style="list-style-type: none"> <li>▪ No</li> <li>▪ Yes</li> </ul>	No

\* Visibility depends on order options or device settings

#### 10.4.11 Configuring the local display

The **Display** wizard guides you systematically through all the parameters that can be configured for configuring the local display.

##### Navigation

"Setup" menu → Display

► Display	
Format display	→  104
Value 1 display	→  104
0% bargraph value 1	→  105
100% bargraph value 1	→  105
Value 2 display	→  105
Value 3 display	→  106
0% bargraph value 3	→  106
100% bargraph value 3	→  106
Value 4 display	→  106

### Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
Format display	A local display is provided.	Select how measured values are shown on the display.	<ul style="list-style-type: none"> <li>■ 1 value, max. size</li> <li>■ 1 bargraph + 1 value</li> <li>■ 2 values</li> <li>■ 1 value large + 2 values</li> <li>■ 4 values</li> </ul>	1 value, max. size
Value 1 display	A local display is provided.	Select the measured value that is shown on the local display.	<ul style="list-style-type: none"> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> <li>■ Target mass flow *</li> <li>■ Carrier mass flow *</li> <li>■ Density</li> <li>■ Reference density</li> <li>■ Concentration *</li> <li>■ Dynamic viscosity *</li> <li>■ Kinematic viscosity *</li> <li>■ Temp. compensated dynamic viscosity *</li> <li>■ Temp. compensated kinematic viscosity *</li> <li>■ Temperature</li> <li>■ Carrier pipe temperature *</li> <li>■ Electronic temperature</li> <li>■ Oscillation frequency 0</li> <li>■ Oscillation frequency 1 *</li> <li>■ Oscillation amplitude 0 *</li> <li>■ Oscillation amplitude 1 *</li> <li>■ Frequency fluctuation 0</li> <li>■ Frequency fluctuation 1 *</li> <li>■ Oscillation damping 0</li> <li>■ Oscillation damping 1 *</li> <li>■ Oscillation damping fluctuation 0</li> <li>■ Oscillation damping fluctuation 1 *</li> <li>■ Signal asymmetry</li> <li>■ Exciter current 0</li> <li>■ Exciter current 1 *</li> <li>■ HBSI *</li> <li>■ Totalizer 1</li> <li>■ Totalizer 2</li> <li>■ Totalizer 3</li> <li>■ Current output 1</li> <li>■ Current output 2 *</li> <li>■ Current output 3 *</li> </ul>	Mass flow

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
0% bargraph value 1	A local display is provided.	Enter 0% value for bar graph display.	Signed floating-point number	Country-specific: ■ 0 kg/h ■ 0 lb/min
100% bargraph value 1	A local display is provided.	Enter 100% value for bar graph display.	Signed floating-point number	Depends on country and nominal diameter
Value 2 display	A local display is provided.	Select the measured value that is shown on the local display.	<ul style="list-style-type: none"> <li>■ None</li> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> <li>■ Target mass flow *</li> <li>■ Carrier mass flow *</li> <li>■ Density</li> <li>■ Reference density *</li> <li>■ Concentration *</li> <li>■ Dynamic viscosity *</li> <li>■ Kinematic viscosity *</li> <li>■ Temp. compensated dynamic viscosity *</li> <li>■ Temp. compensated kinematic viscosity *</li> <li>■ Temperature</li> <li>■ Carrier pipe temperature *</li> <li>■ Electronic temperature</li> <li>■ Oscillation frequency 0</li> <li>■ Oscillation frequency 1 *</li> <li>■ Oscillation amplitude 0 *</li> <li>■ Oscillation amplitude 1 *</li> <li>■ Frequency fluctuation 0</li> <li>■ Frequency fluctuation 1 *</li> <li>■ Oscillation damping 0</li> <li>■ Oscillation damping 1 *</li> <li>■ Oscillation damping fluctuation 0</li> <li>■ Oscillation damping fluctuation 1 *</li> <li>■ Signal asymmetry</li> <li>■ Exciter current 0</li> <li>■ Exciter current 1 *</li> <li>■ HBSI *</li> <li>■ Totalizer 1</li> <li>■ Totalizer 2</li> <li>■ Totalizer 3</li> <li>■ Current output 1 *</li> <li>■ Current output 2 *</li> <li>■ Current output 3 *</li> </ul>	None

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
Value 3 display	A local display is provided.	Select the measured value that is shown on the local display.	For the picklist, see the <b>Value 2 display</b> parameter (→ 105)	None
0% bargraph value 3	A selection was made in the <b>Value 3 display</b> parameter.	Enter 0% value for bar graph display.	Signed floating-point number	Country-specific: ■ 0 kg/h ■ 0 lb/min
100% bargraph value 3	A selection was made in the <b>Value 3 display</b> parameter.	Enter 100% value for bar graph display.	Signed floating-point number	0
Value 4 display	A local display is provided.	Select the measured value that is shown on the local display.	For the picklist, see the <b>Value 2 display</b> parameter (→ 105)	None

\* Visibility depends on order options or device settings

### 10.4.12 Configuring the low flow cut off

The **Low flow cut off** wizard systematically guides the user through all the parameters that must be set to configure low flow cut off.

#### Navigation

"Setup" menu → Low flow cut off

#### Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
Assign process variable	-	Select process variable for low flow cut off.	<ul style="list-style-type: none"> <li>■ Off</li> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> </ul>	Mass flow
On value low flow cutoff	One of the following options is selected in the <b>Assign process variable</b> parameter (→ 107): <ul style="list-style-type: none"> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> </ul>	Enter on value for low flow cut off.	Positive floating-point number	Depends on country and nominal diameter
Off value low flow cutoff	One of the following options is selected in the <b>Assign process variable</b> parameter (→ 107): <ul style="list-style-type: none"> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> </ul>	Enter off value for low flow cut off.	0 to 100.0 %	50 %
Pressure shock suppression	One of the following options is selected in the <b>Assign process variable</b> parameter (→ 107): <ul style="list-style-type: none"> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> </ul>	Enter time frame for signal suppression (= active pressure shock suppression).	0 to 100 s	0 s

### 10.4.13 Configuring the partial filled pipe detection

The **Partial filled pipe detection** wizard guides you systematically through all parameters that have to be set for configuring the monitoring of the pipe filling.

#### Navigation

"Setup" menu → Partially filled pipe detection

▶ Partially filled pipe detection	
Assign process variable	→ 108
Low value partial filled pipe detection	→ 108
High value partial filled pipe detection	→ 108
Response time part. filled pipe detect.	→ 108

#### Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
Assign process variable	–	Select process variable for partially filled pipe detection.	<ul style="list-style-type: none"> <li>▪ Off</li> <li>▪ Density</li> <li>▪ Reference density</li> </ul>	Off
Low value partial filled pipe detection	One of the following options is selected in the <b>Assign process variable</b> parameter (→ 108): <ul style="list-style-type: none"> <li>▪ Density</li> <li>▪ Reference density</li> </ul>	Enter lower limit value for deactivating partially filled pipe detection.	Signed floating-point number	200
High value partial filled pipe detection	One of the following options is selected in the <b>Assign process variable</b> parameter (→ 108): <ul style="list-style-type: none"> <li>▪ Density</li> <li>▪ Reference density</li> </ul>	Enter upper limit value for deactivating partially filled pipe detection.	Signed floating-point number	6 000
Response time part. filled pipe detect.	One of the following options is selected in the <b>Assign process variable</b> parameter (→ 108): <ul style="list-style-type: none"> <li>▪ Density</li> <li>▪ Reference density</li> </ul>	Enter time before diagnostic message is displayed for partially filled pipe detection.	0 to 100 s	1 s

## 10.5 Advanced settings

The **Advanced setup** submenu together with its submenus contains parameters for specific settings.

*Navigation to the "Advanced setup" submenu*

**i** The number of submenus can vary depending on the device version. Some submenus are not dealt with in the Operating Instructions. These submenus and the parameters they contain are explained in the Special Documentation for the device.

### Navigation

"Setup" menu → Advanced setup

► Deactivate SIL	
► Display	→ 114
► WLAN settings	→ 119
► Viscosity	
► Concentration	
► Heartbeat setup	
► Configuration backup	→ 120
► Administration	→ 121

### 10.5.1 Using the parameter to enter the access code

#### Navigation

"Setup" menu → Advanced setup

#### Parameter overview with brief description

Parameter	Description	User entry
Enter access code	Enter access code to disable write protection of parameters.	0 to 9999

### 10.5.2 Calculated values

The **Calculated values** submenu contains parameters for calculating the corrected volume flow.

#### Navigation

"Setup" menu → Advanced setup → Calculated values

► Calculated values	
► Corrected volume flow calculation	
Corrected volume flow calculation	→ 111
External reference density	→ 111
Fixed reference density	→ 111
Reference temperature	→ 111
Linear expansion coefficient	→ 111
Square expansion coefficient	→ 111

### Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User interface / User entry	Factory setting
Corrected volume flow calculation	-	Select reference density for calculating the corrected volume flow.	<ul style="list-style-type: none"> <li>▪ Fixed reference density</li> <li>▪ Calculated reference density</li> <li>▪ Reference density by API table 53</li> <li>▪ Current input 1 *</li> <li>▪ Current input 2 *</li> </ul>	Calculated reference density
External reference density	One of the following options is selected in the <b>Corrected volume flow calculation</b> parameter: <ul style="list-style-type: none"> <li>▪ Current input 1 *</li> <li>▪ Current input 2 *</li> </ul>	Shows external reference density.	Floating point number with sign	-
Fixed reference density	The <b>Fixed reference density</b> option is selected in the <b>Corrected volume flow calculation</b> parameter parameter.	Enter fixed value for reference density.	Positive floating-point number	1 kg/Nl
Reference temperature	The <b>Calculated reference density</b> option is selected in the <b>Corrected volume flow calculation</b> parameter parameter.	Enter reference temperature for calculating the reference density.	-273.15 to 99 999 °C	Country-specific: <ul style="list-style-type: none"> <li>▪ +20 °C</li> <li>▪ +68 °F</li> </ul>
Linear expansion coefficient	The <b>Calculated reference density</b> option is selected in the <b>Corrected volume flow calculation</b> parameter parameter.	Enter linear, medium-specific expansion coefficient for calculating the reference density.	Signed floating-point number	0.0
Square expansion coefficient	The <b>Calculated reference density</b> option is selected in the <b>Corrected volume flow calculation</b> parameter parameter.	For media with a non-linear expansion pattern: enter the quadratic, medium-specific expansion coefficient for calculating the reference density.	Signed floating-point number	0.0

\* Visibility depends on order options or device settings

### 10.5.3 Carrying out a sensor adjustment

The **Sensor adjustment** submenu contains parameters that pertain to the functionality of the sensor.

#### Navigation

"Setup" menu → Advanced setup → Sensor adjustment

### Parameter overview with brief description

Parameter	Description	Selection	Factory setting
Installation direction	Set sign of flow direction to match the direction of the arrow on the sensor.	<ul style="list-style-type: none"> <li>■ Flow in arrow direction</li> <li>■ Flow against arrow direction</li> </ul>	Flow in arrow direction

#### Zero point adjustment

All measuring devices are calibrated in accordance with state-of-the-art technology. Calibration takes place under reference conditions → 178. Therefore, a zero point adjustment in the field is generally not required.

Experience shows that zero point adjustment is advisable only in special cases:

- To achieve maximum measuring accuracy even with low flow rates
- Under extreme process or operating conditions (e.g. very high process temperatures or very high-viscosity fluids).

#### Navigation

"Setup" menu → Advanced setup → Sensor adjustment → Zero point adjustment

### Parameter overview with brief description

Parameter	Description	Selection / User interface	Factory setting
Zero point adjustment control	Start zero point adjustment.	<ul style="list-style-type: none"> <li>■ Cancel</li> <li>■ Busy</li> <li>■ Zero point adjust failure</li> <li>■ Start</li> </ul>	Cancel
Progress	Shows the progress of the process.	0 to 100 %	-

#### 10.5.4 Configuring the totalizer

In the **"Totalizer 1 to n"** submenu the individual totalizer can be configured.

#### Navigation

"Setup" menu → Advanced setup → Totalizer 1 to n

### Parameter overview with brief description

Parameter	Prerequisite	Description	Selection	Factory setting
Assign process variable	–	Select process variable for totalizer.	<ul style="list-style-type: none"> <li>■ Off</li> <li>■ Volume flow</li> <li>■ Mass flow</li> <li>■ Corrected volume flow</li> <li>■ Target mass flow *</li> <li>■ Carrier mass flow *</li> </ul>	Mass flow
Unit totalizer 1 to n	One of the following options is selected in the <b>Assign process variable</b> parameter (→ 113)Totalizer 1 to n submenu: <ul style="list-style-type: none"> <li>■ Volume flow</li> <li>■ Mass flow</li> <li>■ Corrected volume flow</li> <li>■ Target mass flow *</li> <li>■ Carrier mass flow *</li> </ul>	Select process variable totalizer unit.	Unit choose list	Country-specific: <ul style="list-style-type: none"> <li>■ kg</li> <li>■ lb</li> </ul>
Totalizer operation mode	One of the following options is selected in the <b>Assign process variable</b> parameter (→ 113)Totalizer 1 to n submenu: <ul style="list-style-type: none"> <li>■ Volume flow</li> <li>■ Mass flow</li> <li>■ Corrected volume flow</li> <li>■ Target mass flow *</li> <li>■ Carrier mass flow *</li> </ul>	Select totalizer calculation mode.	<ul style="list-style-type: none"> <li>■ Net flow total</li> <li>■ Forward flow total</li> <li>■ Reverse flow total</li> </ul>	Net flow total
Failure mode	One of the following options is selected in the <b>Assign process variable</b> parameter (→ 113)Totalizer 1 to n submenu: <ul style="list-style-type: none"> <li>■ Volume flow</li> <li>■ Mass flow</li> <li>■ Corrected volume flow</li> <li>■ Target mass flow *</li> <li>■ Carrier mass flow *</li> </ul>	Define totalizer behavior in alarm condition.	<ul style="list-style-type: none"> <li>■ Stop</li> <li>■ Actual value</li> <li>■ Last valid value</li> </ul>	Stop

\* Visibility depends on order options or device settings

### 10.5.5 Carrying out additional display configurations

In the **Display** submenu you can set all the parameters associated with the configuration of the local display.

#### Navigation

"Setup" menu → Advanced setup → Display

► <b>Display</b>	
Format display	→  115
Value 1 display	→  115

### Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
Format display	A local display is provided.	Select how measured values are shown on the display.	<ul style="list-style-type: none"> <li>■ 1 value, max. size</li> <li>■ 1 bargraph + 1 value</li> <li>■ 2 values</li> <li>■ 1 value large + 2 values</li> <li>■ 4 values</li> </ul>	1 value, max. size
Value 1 display	A local display is provided.	Select the measured value that is shown on the local display.	<ul style="list-style-type: none"> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> <li>■ Target mass flow *</li> <li>■ Carrier mass flow *</li> <li>■ Density</li> <li>■ Reference density</li> <li>■ Concentration *</li> <li>■ Dynamic viscosity *</li> <li>■ Kinematic viscosity *</li> <li>■ Temp. compensated dynamic viscosity *</li> <li>■ Temp. compensated kinematic viscosity *</li> <li>■ Temperature</li> <li>■ Carrier pipe temperature *</li> <li>■ Electronic temperature</li> <li>■ Oscillation frequency 0</li> <li>■ Oscillation frequency 1 *</li> <li>■ Oscillation amplitude 0 *</li> <li>■ Oscillation amplitude 1 *</li> <li>■ Frequency fluctuation 0</li> <li>■ Frequency fluctuation 1 *</li> <li>■ Oscillation damping 0</li> <li>■ Oscillation damping 1 *</li> <li>■ Oscillation damping fluctuation 0</li> <li>■ Oscillation damping fluctuation 1 *</li> <li>■ Signal asymmetry</li> <li>■ Exciter current 0</li> <li>■ Exciter current 1 *</li> <li>■ HBSI *</li> <li>■ Totalizer 1</li> <li>■ Totalizer 2</li> <li>■ Totalizer 3</li> <li>■ Current output 1</li> <li>■ Current output 2 *</li> <li>■ Current output 3 *</li> </ul>	Mass flow

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
0% bargraph value 1	A local display is provided.	Enter 0% value for bar graph display.	Signed floating-point number	Country-specific: <ul style="list-style-type: none"><li>■ 0 kg/h</li><li>■ 0 lb/min</li></ul>
100% bargraph value 1	A local display is provided.	Enter 100% value for bar graph display.	Signed floating-point number	Depends on country and nominal diameter
Decimal places 1	A measured value is specified in the <b>Value 1 display</b> parameter.	Select the number of decimal places for the display value.	<ul style="list-style-type: none"><li>■ x</li><li>■ x.x</li><li>■ x.xx</li><li>■ x.xxx</li><li>■ xxxxx</li></ul>	x.xx

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
Value 2 display	A local display is provided.	Select the measured value that is shown on the local display.	<ul style="list-style-type: none"> <li><input type="checkbox"/> None</li> <li><input type="checkbox"/> Mass flow</li> <li><input type="checkbox"/> Volume flow</li> <li><input type="checkbox"/> Corrected volume flow</li> <li><input type="checkbox"/> Target mass flow *</li> <li><input type="checkbox"/> Carrier mass flow *</li> <li><input type="checkbox"/> Density</li> <li><input type="checkbox"/> Reference density *</li> <li><input type="checkbox"/> Concentration *</li> <li><input type="checkbox"/> Dynamic viscosity *</li> <li><input type="checkbox"/> Kinematic viscosity *</li> <li><input type="checkbox"/> Temp. compensated dynamic viscosity *</li> <li><input type="checkbox"/> Temp. compensated kinematic viscosity *</li> <li><input type="checkbox"/> Temperature</li> <li><input type="checkbox"/> Carrier pipe temperature *</li> <li><input type="checkbox"/> Electronic temperature</li> <li><input type="checkbox"/> Oscillation frequency 0</li> <li><input type="checkbox"/> Oscillation frequency 1 *</li> <li><input type="checkbox"/> Oscillation amplitude 0 *</li> <li><input type="checkbox"/> Oscillation amplitude 1 *</li> <li><input type="checkbox"/> Frequency fluctuation 0</li> <li><input type="checkbox"/> Frequency fluctuation 1 *</li> <li><input type="checkbox"/> Oscillation damping 0</li> <li><input type="checkbox"/> Oscillation damping 1 *</li> <li><input type="checkbox"/> Oscillation damping fluctuation 0</li> <li><input type="checkbox"/> Oscillation damping fluctuation 1 *</li> <li><input type="checkbox"/> Signal asymmetry</li> <li><input type="checkbox"/> Exciter current 0</li> <li><input type="checkbox"/> Exciter current 1 *</li> <li><input type="checkbox"/> HBSI *</li> <li><input type="checkbox"/> Totalizer 1</li> <li><input type="checkbox"/> Totalizer 2</li> <li><input type="checkbox"/> Totalizer 3</li> <li><input type="checkbox"/> Current output 1 *</li> <li><input type="checkbox"/> Current output 2 *</li> <li><input type="checkbox"/> Current output 3 *</li> </ul>	None
Decimal places 2	A measured value is specified in the <b>Value 2 display</b> parameter.	Select the number of decimal places for the display value.	<ul style="list-style-type: none"> <li><input type="checkbox"/> x</li> <li><input type="checkbox"/> x.x</li> <li><input type="checkbox"/> x.xx</li> <li><input type="checkbox"/> x.xxx</li> <li><input type="checkbox"/> xxxxx</li> </ul>	x.xx
Value 3 display	A local display is provided.	Select the measured value that is shown on the local display.	For the picklist, see the <b>Value 2 display</b> parameter (→  105)	None

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
0% bargraph value 3	A selection was made in the <b>Value 3 display</b> parameter.	Enter 0% value for bar graph display.	Signed floating-point number	Country-specific: ■ 0 kg/h ■ 0 lb/min
100% bargraph value 3	A selection was made in the <b>Value 3 display</b> parameter.	Enter 100% value for bar graph display.	Signed floating-point number	0
Decimal places 3	A measured value is specified in the <b>Value 3 display</b> parameter.	Select the number of decimal places for the display value.	<ul style="list-style-type: none"> <li>■ x</li> <li>■ x.x</li> <li>■ x.xx</li> <li>■ x.xxx</li> <li>■ xxxxx</li> </ul>	x.xx
Value 4 display	A local display is provided.	Select the measured value that is shown on the local display.	For the picklist, see the <b>Value 2 display</b> parameter (→ 105)	None
Decimal places 4	A measured value is specified in the <b>Value 4 display</b> parameter.	Select the number of decimal places for the display value.	<ul style="list-style-type: none"> <li>■ x</li> <li>■ x.x</li> <li>■ x.xx</li> <li>■ x.xxx</li> <li>■ xxxxx</li> </ul>	x.xx
Display language	A local display is provided.	Set display language.	<ul style="list-style-type: none"> <li>■ English</li> <li>■ Deutsch *</li> <li>■ Français *</li> <li>■ Español *</li> <li>■ Italiano *</li> <li>■ Nederlands *</li> <li>■ Portuguesa *</li> <li>■ Polski *</li> <li>■ русский язык (Russian) *</li> <li>■ Svenska *</li> <li>■ Türkçe *</li> <li>■ 中文 (Chinese) *</li> <li>■ 日本語 (Japanese) *</li> <li>■ 한국어 (Korean) *</li> <li>■ Bahasa Indonesia *</li> <li>■ tiéng Viêt (Vietnamese) *</li> <li>■ čeština (Czech) *</li> </ul>	English (alternatively, the ordered language is preset in the device)
Display interval	A local display is provided.	Set time measured values are shown on display if display alternates between values.	1 to 10 s	5 s
Display damping	A local display is provided.	Set display reaction time to fluctuations in the measured value.	0.0 to 999.9 s	0.0 s
Header	A local display is provided.	Select header contents on local display.	<ul style="list-style-type: none"> <li>■ Device tag</li> <li>■ Free text</li> </ul>	Device tag
Header text	In the <b>Header</b> parameter, the <b>Free text</b> option is selected.	Enter display header text.	Max. 12 characters such as letters, numbers or special characters (e.g. @, %, /)	-----

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
Separator	A local display is provided.	Select decimal separator for displaying numerical values.	<ul style="list-style-type: none"> <li>▪ . (point)</li> <li>▪ , (comma)</li> </ul>	. (point)
Backlight	One of the following conditions is met: <ul style="list-style-type: none"> <li>▪ Order code for "Display; operation", option <b>F</b> "4-line, illum.; touch control"</li> <li>▪ Order code for "Display; operation", option <b>G</b> "4-line, illum.; touch control +WLAN"</li> <li>▪ Order code for "Display; operation", option <b>O</b> "remote 4-line display, illum; 10m/30ft cable; touch control"</li> </ul>	Switch the local display backlight on and off.	<ul style="list-style-type: none"> <li>▪ Disable</li> <li>▪ Enable</li> </ul>	Enable

\* Visibility depends on order options or device settings

### 10.5.6 WLAN configuration

The **WLAN Settings** submenu guides the user systematically through all the parameters that have to be set for the WLAN configuration.

#### Navigation

"Setup" menu → Advanced setup → WLAN Settings

#### Parameter overview with brief description

Parameter	Prerequisite	Description	User entry / Selection	Factory setting
WLAN IP address	-	Enter IP address of the device WLAN interface.	4 octet: 0 to 255 (in the particular octet)	192.168.1.212
Security type	-	Select the security type of the WLAN interface.	<ul style="list-style-type: none"> <li>▪ Unsecured</li> <li>▪ WPA2-PSK</li> </ul>	WPA2-PSK

Parameter	Prerequisite	Description	User entry / Selection	Factory setting
WLAN passphrase	In the <b>Security type</b> parameter, the <b>WPA2-PSK</b> option is selected.	Enter the network key (8 to 32 characters).  The network key supplied with the device should be changed during commissioning for security reasons.	8 to 32-digit character string comprising numbers, letters and special characters	Serial number of the measuring device (e.g. L100A802000)
Assign SSID name	-	Select which name will be used for SSID: device tag or user-defined name.	■ Device tag ■ User-defined	User-defined
SSID name	In the <b>Assign SSID name</b> parameter, the <b>User-defined</b> option is selected.	Enter the user-defined SSID name (max. 32 characters).  The user-defined SSID name may only be assigned once. If the SSID name is assigned more than once, the devices can interfere with one another.	Max. 32-digit character string comprising numbers, letters and special characters	EH_device designation_last 7 digits of the serial number (e.g. EH_Promass_300_A 802000)
Apply changes	-	Use changed WLAN settings.	■ Cancel ■ Ok	Cancel

### 10.5.7 Configuration management

After commissioning, you can save the current device configuration or restore the previous device configuration.

You can do so using the **Configuration management** parameter and the related options found in the **Configuration backup** submenu.

#### Navigation

"Setup" menu → Advanced setup → Configuration backup

#### Parameter overview with brief description

Parameter	Description	User interface / Selection	Factory setting
Operating time	Indicates how long the device has been in operation.	Days (d), hours (h), minutes (m) and seconds (s)	-
Last backup	Shows when the last data backup was saved to embedded HistoROM.	Days (d), hours (h), minutes (m) and seconds (s)	-

Parameter	Description	User interface / Selection	Factory setting
Configuration management	Select action for managing the device data in the embedded HistoROM.	<ul style="list-style-type: none"> <li>▪ Cancel</li> <li>▪ Execute backup</li> <li>▪ Restore</li> <li>▪ Compare</li> <li>▪ Clear backup data</li> </ul>	Cancel
Backup state	Shows the current status of data saving or restoring.	<ul style="list-style-type: none"> <li>▪ None</li> <li>▪ Backup in progress</li> <li>▪ Restoring in progress</li> <li>▪ Delete in progress</li> <li>▪ Compare in progress</li> <li>▪ Restoring failed</li> <li>▪ Backup failed</li> </ul>	None
Comparison result	Comparison of current device data with embedded HistoROM.	<ul style="list-style-type: none"> <li>▪ Settings identical</li> <li>▪ Settings not identical</li> <li>▪ No backup available</li> <li>▪ Backup settings corrupt</li> <li>▪ Check not done</li> <li>▪ Dataset incompatible</li> </ul>	Check not done

#### Function scope of the "Configuration management" parameter

Options	Description
Cancel	No action is executed and the user exits the parameter.
Execute backup	A backup copy of the current device configuration is saved from the integrated HistoROM to the memory of the device. The backup copy includes the transmitter data of the device.
Restore	The last backup copy of the device configuration is restored from the device memory to the device's integrated HistoROM. The backup copy includes the transmitter data of the device.
Compare	The device configuration saved in the device memory is compared with the current device configuration of the integrated HistoROM.
Clear backup data	The backup copy of the device configuration is deleted from the memory of the device.

##### Integrated HistoROM

A HistoROM is a "non-volatile" device memory in the form of an EEPROM.

While this action is in progress, the configuration cannot be edited via the local display and a message on the processing status appears on the display.

#### 10.5.8 Using parameters for device administration

The **Administration** submenu systematically guides the user through all the parameters that can be used for device administration purposes.

##### Navigation

"Setup" menu → Advanced setup → Administration

### Using the parameter to define the access code

#### Navigation

"Setup" menu → Advanced setup → Administration → Define access code

### Parameter overview with brief description

Parameter	Description	User entry
Define access code	Restrict write-access to parameters to protect the configuration of the device against unintentional changes.	Max. 16-digit character string comprising numbers, letters and special characters
Confirm access code	Confirm the entered access code.	Max. 16-digit character string comprising numbers, letters and special characters

### Using the parameter to reset the access code

#### Navigation

"Setup" menu → Advanced setup → Administration → Reset access code

### Parameter overview with brief description

Parameter	Description	User interface / User entry	Factory setting
Operating time	Indicates how long the device has been in operation.	Days (d), hours (h), minutes (m) and seconds (s)	-
Reset access code	Reset access code to factory settings. For a reset code, contact your Endress+Hauser service organization. The reset code can only be entered via: <ul style="list-style-type: none"> <li>■ Web browser</li> <li>■ DeviceCare, FieldCare (via service interface CDI-RJ45)</li> <li>■ Fieldbus</li> </ul>	Character string comprising numbers, letters and special characters	0x00

### Using the parameter to reset the device

#### Navigation

"Setup" menu → Advanced setup → Administration

#### Parameter overview with brief description

Parameter	Description	Selection	Factory setting
Device reset	Reset the device configuration - either entirely or in part - to a defined state.	<ul style="list-style-type: none"> <li>▪ Cancel</li> <li>▪ To delivery settings</li> <li>▪ Restart device</li> <li>▪ Restore S-DAT backup</li> </ul>	Cancel

## 10.6 Simulation

The **Simulation** submenu enables you to simulate, without a real flow situation, various process variables in the process and the device alarm mode and to verify downstream signal chains (switching valves or closed-control loops).

#### Navigation

"Diagnostics" menu → Simulation

► Simulation	
Assign simulation process variable	→  124
Process variable value	→  124
Status input simulation	→  125
Input signal level	→  125
Current input 1 to n simulation	→  125
Value current input 1 to n	→  125
Current output 1 to n simulation	→  125
Value current output 1 to n	→  125
Frequency output simulation 1 to n	→  125
Frequency value 1 to n	→  125
Pulse output simulation 1 to n	→  125
Pulse value 1 to n	→  125
Switch output simulation 1 to n	→  125
Switch status 1 to n	→  125

Relay output 1 to n simulation	→ ☰ 125
Switch status 1 to n	→ ☰ 125
Pulse output simulation	→ ☰ 125
Pulse value	→ ☰ 125
Device alarm simulation	→ ☰ 125
Diagnostic event category	→ ☰ 126
Diagnostic event simulation	→ ☰ 126

### Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry / User interface	Factory setting
Assign simulation process variable	-	Select a process variable for the simulation process that is activated.	<ul style="list-style-type: none"> <li>▪ Off</li> <li>▪ Mass flow</li> <li>▪ Volume flow</li> <li>▪ Corrected volume flow</li> <li>▪ Density</li> <li>▪ Reference density</li> <li>▪ Temperature</li> <li>▪ Dynamic viscosity *</li> <li>▪ Kinematic viscosity *</li> <li>▪ Temp. compensated dynamic viscosity *</li> <li>▪ Temp. compensated kinematic viscosity *</li> <li>▪ Concentration *</li> <li>▪ Target mass flow *</li> <li>▪ Carrier mass flow *</li> </ul>	Off
Process variable value	One of the following options is selected in the <b>Assign simulation process variable</b> parameter (→ ☰ 124): <ul style="list-style-type: none"> <li>▪ Mass flow</li> <li>▪ Volume flow</li> <li>▪ Corrected volume flow</li> <li>▪ Density</li> <li>▪ Reference density</li> <li>▪ Temperature</li> <li>▪ Dynamic viscosity *</li> <li>▪ Kinematic viscosity *</li> <li>▪ Temp. compensated dynamic viscosity *</li> <li>▪ Temp. compensated kinematic viscosity *</li> <li>▪ Concentration *</li> <li>▪ Target mass flow *</li> <li>▪ Carrier mass flow *</li> </ul>	Enter the simulation value for the selected process variable.	Depends on the process variable selected	0

Parameter	Prerequisite	Description	Selection / User entry / User interface	Factory setting
Status input simulation	–	Switch simulation of the status input on and off.	▪ Off ▪ On	Off
Input signal level	In the <b>Status input simulation</b> parameter, the <b>On</b> option is selected.	Select the signal level for the simulation of the status input.	▪ High ▪ Low	High
Current input 1 to n simulation	–	Switch simulation of the current input on and off.	▪ Off ▪ On	Off
Value current input 1 to n	In the <b>Current input 1 to n simulation</b> parameter, the <b>On</b> option is selected.	Enter the current value for simulation.	0 to 22.5 mA	0 mA
Current output 1 to n simulation	–	Switch the simulation of the current output on and off.	▪ Off ▪ On	Off
Value current output 1 to n	In the <b>Current output 1 to n simulation</b> parameter, the <b>On</b> option is selected.	Enter the current value for simulation.	3.59 to 22.5 mA	3.59 mA
Frequency output simulation 1 to n	In the <b>Operating mode</b> parameter, the <b>Frequency</b> option is selected.	Switch the simulation of the frequency output on and off.	▪ Off ▪ On	Off
Frequency value 1 to n	In the <b>Frequency output simulation 1 to n</b> parameter, the <b>On</b> option is selected.	Enter the frequency value for the simulation.	0.0 to 12 500.0 Hz	0.0 Hz
Pulse output simulation 1 to n	In the <b>Operating mode</b> parameter, the <b>Pulse</b> option is selected.	Set and switch off the pulse output simulation.   For <b>Fixed value</b> option: <b>Pulse width</b> parameter (→ 89) defines the pulse width of the pulses output.	▪ Off ▪ Fixed value ▪ Down-counting value	Off
Pulse value 1 to n	In the <b>Pulse output simulation 1 to n</b> parameter, the <b>Down-counting value</b> option is selected.	Enter the number of pulses for simulation.	0 to 65 535	0
Switch output simulation 1 to n	In the <b>Operating mode</b> parameter, the <b>Switch</b> option is selected.	Switch the simulation of the switch output on and off.	▪ Off ▪ On	Off
Switch status 1 to n	–	Select the status of the status output for the simulation.	▪ Open ▪ Closed	Open
Relay output 1 to n simulation	–	Switch simulation of the relay output on and off.	▪ Off ▪ On	Off
Switch status 1 to n	In the <b>Switch output simulation 1 to n</b> parameter, the <b>On</b> option is selected.	Select status of the relay output for the simulation.	▪ Open ▪ Closed	Open
Pulse output simulation	–	Set and switch off the pulse output simulation.   For <b>Fixed value</b> option: <b>Pulse width</b> parameter defines the pulse width of the pulses output.	▪ Off ▪ Fixed value ▪ Down-counting value	Off
Pulse value	In the <b>Pulse output simulation</b> parameter, the <b>Down-counting value</b> option is selected.	Set and switch off the pulse output simulation.	0 to 65 535	0
Device alarm simulation	–	Switch the device alarm on and off.	▪ Off ▪ On	Off

Parameter	Prerequisite	Description	Selection / User entry / User interface	Factory setting
Diagnostic event category	–	Select a diagnostic event category.	<ul style="list-style-type: none"> <li>▪ Sensor</li> <li>▪ Electronics</li> <li>▪ Configuration</li> <li>▪ Process</li> </ul>	Process
Diagnostic event simulation	–	Select a diagnostic event to simulate this event.	<ul style="list-style-type: none"> <li>▪ Off</li> <li>▪ Diagnostic event picklist (depends on the category selected)</li> </ul>	Off
Logging interval	–	Define the logging interval tlog for data logging. This value defines the time interval between the individual data points in the memory.	1.0 to 3 600.0 s	–

\* Visibility depends on order options or device settings

## 10.7 Protecting settings from unauthorized access

The following write protection options exist in order to protect the configuration of the measuring device from unintentional modification:

- Protect access to parameters via access code → 126
- Protect access to local operation via key locking → 56
- Protect access to measuring device via write protection switch → 127

### 10.7.1 Write protection via access code

The effects of the user-specific access code are as follows:

- Via local operation, the parameters for the measuring device configuration are write-protected and their values can no longer be changed.
- Device access is protected via the Web browser, as are the parameters for the measuring device configuration.
- Device access is protected via FieldCare or DeviceCare (via CDI-RJ45 service interface), as are the parameters for the measuring device configuration.

#### Defining the access code via local display

1. Navigate to the **Define access code** parameter (→ 122).
2. Define a max. 16-digit character string comprising numbers, letters and special characters as the access code.
3. Enter the access code again in the **Confirm access code** parameter (→ 122) to confirm the code.  
↳ The -symbol appears in front of all write-protected parameters.

The device automatically locks the write-protected parameters again if a key is not pressed for 10 minutes in the navigation and editing view. The device locks the write-protected parameters automatically after 60 s if the user skips back to the operational display mode from the navigation and editing view.

-  ▪ If parameter write protection is activated via an access code, it can also only be deactivated via this access code → 56.
- The user role with which the user is currently logged on via the local display is indicated by the → 56 **Access status** parameter. Navigation path: Operation → Access status

### Parameters which can always be modified via the local display

Certain parameters that do not affect the measurement are excepted from parameter write protection via the local display. Despite the user-specific access code, they can always be modified, even if the other parameters are locked.

### Defining the access code via the Web browser

1. Navigate to the **Define access code** parameter (→ 122).
2. Max. Define a max. 4-digit numeric code as an access code.
3. Enter the access code again in the **Confirm access code** parameter (→ 122) to confirm the code.  
↳ The Web browser switches to the login page.

**i** If no action is performed for 10 minutes, the Web browser automatically returns to the login page.

- i**
- If parameter write protection is activated via an access code, it can also only be deactivated via this access code → 56.
  - The user role with which the user is currently logged on via Web browser is indicated by the **Access status** parameter. Navigation path: Operation → Access status

### Resetting the access code

If you misplace the user-specific access code, it is possible to reset the code to the factory setting. A reset code must be entered for this purpose. The user-specific access code can then be defined again afterwards.

#### Via Web browser, FieldCare, DeviceCare (via CDI-RJ45 service interface), fieldbus

**i** For a reset code, contact your Endress+Hauser service organization.

1. Navigate to the **Reset access code** parameter (→ 122).
2. Enter the reset code.  
↳ The access code has been reset to the factory setting **0000**. It can be redefined → 126.

### 10.7.2 Write protection via write protection switch

Unlike parameter write protection via a user-specific access code, this allows write access to the entire operating menu - except for the "**Contrast display**" parameter - to be locked.

The parameter values are now read only and cannot be edited any more (exception "**Contrast display**" parameter):

- Via local display
- Via HART protocol

A0029630

Setting the write protection (WP) switch on the main electronics module to the **ON** position enables hardware write protection.

- ↳ In the **Locking status** parameter the **Hardware locked** option is displayed  
→ 129. In addition, on the local display the -symbol appears in front of the parameters in the header of the operational display and in the navigation view.

A0029425

2. Setting the write protection (WP) switch on the main electronics module to the **OFF** position (factory setting) disables hardware write protection.

- ↳ No option is displayed in the **Locking status** parameter → 129. On the local display, the -symbol disappears from in front of the parameters in the header of the operational display and in the navigation view.

## 11 Operation

### 11.1 Reading the device locking status

Device active write protection: **Locking status** parameter

Operation → Locking status

*Function scope of the "Locking status" parameter*

Options	Description
None	The access status displayed in the <b>Access status</b> parameter applies → 56. Only appears on local display.
Hardware locked	The DIP switch for hardware locking is activated on the PCB board. This locks write access to the parameters (e.g. via local display or operating tool).
SIL locked	The SIL mode is enabled. This locks write access to the parameters (e.g. via local display or operating tool).
Temporarily locked	Write access to the parameters is temporarily locked on account of internal processes running in the device (e.g. data upload/download, reset etc.). Once the internal processing has been completed, the parameters can be changed once again.

### 11.2 Adjusting the operating language

Detailed information:

- To configure the operating language → 74
- For information on the operating languages supported by the measuring device → 189

### 11.3 Configuring the display

Detailed information:

- On the basic settings for the local display → 103
- On the advanced settings for the local display → 114

### 11.4 Reading measured values

With the **Measured values** submenu, it is possible to read all the measured values.

#### Navigation

"Diagnostics" menu → Measured values

### 11.4.1 "Measured variables" submenu

The **Measured variables** submenu contains all the parameters needed to display the current measured values for each process variable.

#### Navigation

"Diagnostics" menu → Measured values → Measured variables

► Measured variables	
Mass flow	→ <a href="#">130</a>
Volume flow	→ <a href="#">130</a>
Corrected volume flow	→ <a href="#">131</a>
Density	→ <a href="#">131</a>
Reference density	→ <a href="#">131</a>

Carrier mass flow	→ <a href="#">132</a>

#### Parameter overview with brief description

Parameter	Prerequisite	Description	User interface
Mass flow	-	<p>Displays the mass flow currently measured.</p> <p><i>Dependency</i> The unit is taken from the <b>Mass flow unit</b> parameter (→ <a href="#">77</a>).</p>	Signed floating-point number
Volume flow	-	<p>Displays the volume flow currently calculated.</p> <p><i>Dependency</i> The unit is taken from the <b>Volume flow unit</b> parameter (→ <a href="#">77</a>).</p>	Signed floating-point number

Parameter	Prerequisite	Description	User interface
Corrected volume flow	–	<p>Displays the corrected volume flow currently calculated.</p> <p><i>Dependency</i> The unit is taken from the <b>Corrected volume flow unit</b> parameter (→ 77).</p>	Signed floating-point number
Density	–	<p>Shows the density currently measured.</p> <p><i>Dependency</i> The unit is taken from the <b>Density unit</b> parameter (→ 77).</p>	Signed floating-point number
Reference density	–	<p>Displays the reference density currently calculated.</p> <p><i>Dependency</i> The unit is taken from the <b>Reference density unit</b> parameter (→ 77).</p>	Signed floating-point number
Temperature	–	<p>Shows the medium temperature currently measured.</p> <p><i>Dependency</i> The unit is taken from the <b>Temperature unit</b> parameter (→ 78).</p>	Signed floating-point number
Pressure value	–	<p>Displays either a fixed or external pressure value.</p> <p><i>Dependency</i> The unit is taken from the <b>Pressure unit</b> parameter (→ 78).</p>	Signed floating-point number
Dynamic viscosity	<p>For the following order code: "Application package", option <b>EG</b> "Viscosity"</p> <p><b>i</b> The software options currently enabled are displayed in the <b>Software option overview</b> parameter.</p>	<p>Displays the dynamic viscosity currently calculated.</p> <p><i>Dependency</i> The unit is taken from the <b>Dynamic viscosity unit</b> parameter.</p>	Signed floating-point number
Kinematic viscosity	<p>For the following order code: "Application package", option <b>EG</b> "Viscosity"</p> <p><b>i</b> The software options currently enabled are displayed in the <b>Software option overview</b> parameter.</p>	<p>Displays the kinematic viscosity currently calculated.</p> <p><i>Dependency</i> The unit is taken from the <b>Kinematic viscosity unit</b> parameter.</p>	Signed floating-point number
Temp. compensated dynamic viscosity	<p>For the following order code: "Application package", option <b>EG</b> "Viscosity"</p> <p><b>i</b> The software options currently enabled are displayed in the <b>Software option overview</b> parameter.</p>	<p>Displays the temperature compensation currently calculated for the viscosity.</p> <p><i>Dependency</i> The unit is taken from the <b>Dynamic viscosity unit</b> parameter.</p>	Signed floating-point number
Temp. compensated kinematic viscosity	<p>For the following order code: "Application package", option <b>EG</b> "Viscosity"</p> <p><b>i</b> The software options currently enabled are displayed in the <b>Software option overview</b> parameter.</p>	<p>Displays the temperature compensation currently calculated for the kinetic viscosity.</p> <p><i>Dependency</i> The unit is taken from the <b>Kinematic viscosity unit</b> parameter (0578).</p>	Signed floating-point number

Parameter	Prerequisite	Description	User interface
Concentration	For the following order code: "Application package", option <b>ED</b> "Concentration"  [i] The software options currently enabled are displayed in the <b>Software option overview</b> parameter.	Displays the concentration currently calculated.  <i>Dependency</i> The unit is taken from the <b>Concentration unit</b> parameter.	Signed floating-point number
Target mass flow	With the following conditions: ■ Order code for "Application package", option <b>ED</b> "Concentration" ■ The <b>WT-%</b> option or the <b>User conc.</b> option is selected in the <b>Concentration unit</b> parameter.  [i] The software options currently enabled are displayed in the <b>Software option overview</b> parameter.	Displays the target fluid mass flow currently measured.  <i>Dependency</i> The unit is taken from the <b>Mass flow unit</b> parameter (→ 77).	Signed floating-point number
Carrier mass flow	With the following conditions: ■ Order code for "Application package", option <b>ED</b> "Concentration" ■ The <b>WT-%</b> option or the <b>User conc.</b> option is selected in the <b>Concentration unit</b> parameter.  [i] The software options currently enabled are displayed in the <b>Software option overview</b> parameter.	Displays the carrier fluid mass flow currently measured.  <i>Dependency</i> The unit is taken from the <b>Mass flow unit</b> parameter (→ 77).	Signed floating-point number

#### 11.4.2 "Totalizer" submenu

The **Totalizer** submenu contains all the parameters needed to display the current measured values for every totalizer.

##### Navigation

"Diagnostics" menu → Measured values → Totalizer

#### Parameter overview with brief description

Parameter	Prerequisite	Description	User interface
Totalizer value 1 to n	A process variable is selected in the <b>Assign process variable</b> parameter (→ 113) of the <b>Totalizer 1 to n</b> submenu.	Displays the current totalizer counter value.	Signed floating-point number
Totalizer overflow 1 to n	A process variable is selected in the <b>Assign process variable</b> parameter (→ 113) of the <b>Totalizer 1 to n</b> submenu.	Displays the current totalizer overflow.	Integer with sign

### 11.4.3 "Input values" submenu

The **Input values** submenu guides you systematically to the individual input values.

#### Navigation

"Diagnostics" menu → Measured values → Input values

#### Input values of current input

The **Current input 1 to n** submenu contains all the parameters needed to display the current measured values for every current input.

#### Navigation

"Diagnostics" menu → Measured values → Input values → Current input 1 to n

#### Parameter overview with brief description

Parameter	Description	User interface
Measured values 1 to n	Displays the current input value.	Signed floating-point number
Measured current 1 to n	Displays the current value of the current input.	0 to 22.5 mA

#### Input values of status input

The **Status input 1 to n** submenu contains all the parameters needed to display the current measured values for every status input.

#### Navigation

"Diagnostics" menu → Measured values → Input values → Status input 1 to n

### Parameter overview with brief description

Parameter	Description	User interface
Value status input	Shows the current input signal level.	<ul style="list-style-type: none"> <li>▪ High</li> <li>▪ Low</li> </ul>

#### 11.4.4 Output values

The **Output values** submenu contains all the parameters needed to display the current measured values for every output.

##### Navigation

"Diagnostics" menu → Measured values → Output values

#### Output values of current output

The **Value current output** submenu contains all the parameters needed to display the current measured values for every current output.

##### Navigation

"Diagnostics" menu → Measured values → Output values → Value current output 1 to n

### Parameter overview with brief description

Parameter	Description	User interface
Output current 1	Displays the current value currently calculated for the current output.	3.59 to 22.5 mA
Measured current	Displays the current value currently measured for the current output.	0 to 30 mA

#### Output values for pulse/frequency/switch output

The **Pulse/frequency/switch output 1 to n** submenu contains all the parameters needed to display the current measured values for every pulse/frequency/switch output.

**Navigation**

"Diagnostics" menu → Measured values → Output values → Pulse/frequency/switch output 1 to n

**Parameter overview with brief description**

Parameter	Prerequisite	Description	User interface / User entry	Factory setting
Output frequency	In the <b>Operating mode</b> parameter, the <b>Frequency</b> option is selected.	Displays the value currently measured for the frequency output.	0.0 to 12 500.0 Hz	-
Value per pulse	In the <b>Operating mode</b> parameter, the <b>Pulse</b> option is selected and one of the following options is selected in the <b>Assign pulse output</b> parameter (→ 89): <ul style="list-style-type: none"> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> <li>■ Target mass flow *</li> <li>■ Carrier mass flow *</li> </ul>	Enter measured value at which a pulse is output.	Signed floating-point number	Depends on country and nominal diameter
Switch status	The <b>Switch</b> option is selected in the <b>Operating mode</b> parameter.	Displays the current switch output status.	<ul style="list-style-type: none"> <li>■ Open</li> <li>■ Closed</li> </ul>	-

\* Visibility depends on order options or device settings

**Output values for relay output**

The **Relay output 1 to n** submenu contains all the parameters needed to display the current measured values for every relay output.

**Navigation**

"Diagnostics" menu → Measured values → Output values → Relay output 1 to n

### Parameter overview with brief description

Parameter	Description	User interface
Switch status	Shows the current relay switch status.	<ul style="list-style-type: none"> <li>▪ Open</li> <li>▪ Closed</li> </ul>
Switch cycles	Shows number of all performed switch cycles.	Positive integer
Max. switch cycles number	Shows the maximal number of guaranteed switch cycles.	Positive integer

### Output values for double pulse output

The **Double pulse output** submenu contains all the parameters needed to display the current measured values for every double pulse output.

#### Navigation

"Diagnostics" menu → Measured values → Output values → Double pulse output

### Parameter overview with brief description

Parameter	Description	User interface
Pulse output	Shows the currently output pulse frequency.	Positive floating-point number

## 11.5 Adapting the measuring device to the process conditions

The following are available for this purpose:

- Basic settings using the **Setup** menu (→ 74)
- Advanced settings using the **Advanced setup** submenu (→ 109)

## 11.6 Performing a totalizer reset

The totalizers are reset in the **Operation** submenu:

- Control Totalizer
- Reset all totalizers

#### Navigation

"Operation" menu → Totalizer handling

### Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
Control Totalizer 1 to n	One of the following options is selected in the <b>Assign process variable</b> parameter (→ 113) <b>Totalizer 1 to n</b> submenu: <ul style="list-style-type: none"><li>▪ Volume flow</li><li>▪ Mass flow</li><li>▪ Corrected volume flow</li><li>▪ Target mass flow *</li><li>▪ Carrier mass flow *</li></ul>	Control totalizer value.	<ul style="list-style-type: none"><li>▪ Totalize</li><li>▪ Reset + hold</li><li>▪ Preset + hold</li><li>▪ Reset + totalize</li><li>▪ Preset + totalize</li><li>▪ Hold</li></ul>	Totalize
Preset value 1 to n	One of the following options is selected in the <b>Assign process variable</b> parameter (→ 113) <b>Totalizer 1 to n</b> submenu: <ul style="list-style-type: none"><li>▪ Volume flow</li><li>▪ Mass flow</li><li>▪ Corrected volume flow</li><li>▪ Target mass flow *</li><li>▪ Carrier mass flow *</li></ul>	Specify start value for totalizer. <i>Dependency</i>	Signed floating-point number	Country-specific: <ul style="list-style-type: none"><li>▪ 0 kg</li><li>▪ 0 lb</li></ul>
Reset all totalizers	–	Reset all totalizers to 0 and start.	<ul style="list-style-type: none"><li>▪ Cancel</li><li>▪ Reset + totalize</li></ul>	Cancel

\* Visibility depends on order options or device settings

#### 11.6.1 Function scope of the "Control Totalizer" parameter

Options	Description
Totalize	The totalizer is started or continues running.
Reset + hold	The totaling process is stopped and the totalizer is reset to 0.
Preset + hold	The totaling process is stopped and the totalizer is set to its defined start value from the <b>Preset value</b> parameter.
Reset + totalize	The totalizer is reset to 0 and the totaling process is restarted.
Preset + totalize	The totalizer is set to the defined start value from the <b>Preset value</b> parameter and the totaling process is restarted.
Hold	Totalizing is stopped.

#### 11.6.2 Function scope of the "Reset all totalizers" parameter

Options	Description
Cancel	No action is executed and the user exits the parameter.
Reset + totalize	Resets all totalizers to 0 and restarts the totaling process. This deletes all the flow values previously totalized.

### 11.7 Showing data logging

The **Extended HistoROM** application package must be enabled in the device (order option) for the **Data logging** submenu to appear. This contains all the parameters for the measured value history.

-  Data logging is also available via:
- Plant Asset Management Tool FieldCare → 66.
  - Web browser → 57

**Function range**

- A total of 1000 measured values can be stored
- 4 logging channels
- Adjustable logging interval for data logging
- Display of the measured value trend for each logging channel in the form of a chart

A0016357

27 Chart of a measured value trend

- x-axis: depending on the number of channels selected displays 250 to 1000 measured values of a process variable.
- y-axis: displays the approximate measured value span and constantly adapts this to the ongoing measurement.

**i** If the length of the logging interval or the assignment of the process variables to the channels is changed, the content of the data logging is deleted.

**Navigation**

"Diagnostics" menu → Data logging

<b>► Data logging</b>	
Assign channel 1...4	→ 139
Logging interval	→ 139
Clear logging data	→ 139
Data logging	→ 140
Logging delay	→ 140
Data logging control	→ 140
Data logging status	→ 140
Entire logging duration	→ 140

### Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry / User interface	Factory setting
Assign channel 1 to n	The <b>Extended HistoROM</b> application package is available.	Assign process variable to logging channel.	<ul style="list-style-type: none"> <li>▪ Off</li> <li>▪ Mass flow</li> <li>▪ Volume flow</li> <li>▪ Corrected volume flow</li> <li>▪ Target mass flow *</li> <li>▪ Carrier mass flow *</li> <li>▪ Density</li> <li>▪ Reference density *</li> <li>▪ Concentration *</li> <li>▪ Dynamic viscosity *</li> <li>▪ Kinematic viscosity *</li> <li>▪ Temp. compensated dynamic viscosity *</li> <li>▪ Temp. compensated kinematic viscosity *</li> <li>▪ Temperature</li> <li>▪ Carrier pipe temperature *</li> <li>▪ Electronic temperature</li> <li>▪ Oscillation frequency 0</li> <li>▪ Oscillation frequency 1 *</li> <li>▪ Frequency fluctuation 0</li> <li>▪ Frequency fluctuation 1 *</li> <li>▪ Oscillation amplitude *</li> <li>▪ Oscillation amplitude 1 *</li> <li>▪ Oscillation damping 0</li> <li>▪ Oscillation damping 1 *</li> <li>▪ Oscillation damping fluctuation 0</li> <li>▪ Oscillation damping fluctuation 1 *</li> <li>▪ Signal asymmetry</li> <li>▪ Exciter current 0</li> <li>▪ Exciter current 1 *</li> <li>▪ Current output 1</li> <li>▪ Current output 2 *</li> <li>▪ Current output 3 *</li> <li>▪ Current output 4 *</li> </ul>	Off
Logging interval	The <b>Extended HistoROM</b> application package is available.	Define the logging interval for data logging. This value defines the time interval between the individual data points in the memory.	0.1 to 999.0 s	1.0 s
Clear logging data	The <b>Extended HistoROM</b> application package is available.	Clear the entire logging data.	<ul style="list-style-type: none"> <li>▪ Cancel</li> <li>▪ Clear data</li> </ul>	Cancel

Parameter	Prerequisite	Description	Selection / User entry / User interface	Factory setting
Data logging	–	Select the data logging method.	<ul style="list-style-type: none"> <li>▪ Overwriting</li> <li>▪ Not overwriting</li> </ul>	Overwriting
Logging delay	In the <b>Data logging</b> parameter, the <b>Not overwriting</b> option is selected.	Enter the time delay for measured value logging.	0 to 999 h	0 h
Data logging control	In the <b>Data logging</b> parameter, the <b>Not overwriting</b> option is selected.	Start and stop measured value logging.	<ul style="list-style-type: none"> <li>▪ None</li> <li>▪ Delete + start</li> <li>▪ Stop</li> </ul>	None
Data logging status	In the <b>Data logging</b> parameter, the <b>Not overwriting</b> option is selected.	Displays the measured value logging status.	<ul style="list-style-type: none"> <li>▪ Done</li> <li>▪ Delay active</li> <li>▪ Active</li> <li>▪ Stopped</li> </ul>	Done
Entire logging duration	In the <b>Data logging</b> parameter, the <b>Not overwriting</b> option is selected.	Displays the total logging duration.	Positive floating-point number	0 s

\* Visibility depends on order options or device settings

## 12 Diagnostics and troubleshooting

### 12.1 General troubleshooting

*For local display*

Error	Possible causes	Solution
Local display dark and no output signals	Supply voltage does not match the value indicated on the nameplate.	Apply the correct supply voltage → <a href="#">34</a> .
Local display dark and no output signals	The polarity of the supply voltage is wrong.	Correct the polarity.
Local display dark and no output signals	No contact between connecting cables and terminals.	Check the connection of the cables and correct if necessary.
Local display dark and no output signals	Terminals are not plugged into the I/O electronics module correctly. Terminals are not plugged into the main electronics module correctly.	Check terminals.
Local display dark and no output signals	I/O electronics module is defective. Main electronics module is defective.	Order spare part → <a href="#">163</a> .
Local display is dark, but signal output is within the valid range	Display is set too bright or too dark.	<ul style="list-style-type: none"> <li>▪ Set the display brighter by simultaneously pressing  + .</li> <li>▪ Set the display darker by simultaneously pressing  + .</li> </ul>
Local display is dark, but signal output is within the valid range	The cable of the display module is not plugged in correctly.	Insert the plug correctly into the main electronics module and display module.
Local display is dark, but signal output is within the valid range	Display module is defective.	Order spare part → <a href="#">163</a> .
Backlighting of local display is red	Diagnostic event with "Alarm" diagnostic behavior has occurred.	Take remedial measures
Text on local display appears in a foreign language and cannot be understood.	Incorrect operating language is configured.	<ol style="list-style-type: none"> <li>1. Press  +  for 2 s ("home position").</li> <li>2. Press .</li> <li>3. Set the desired language in the <b>Display language</b> parameter (→ <a href="#">118</a>).</li> </ol>
Message on local display: "Communication Error" "Check Electronics"	Communication between the display module and the electronics is interrupted.	<ul style="list-style-type: none"> <li>▪ Check the cable and the connector between the main electronics module and display module.</li> <li>▪ Order spare part → <a href="#">163</a>.</li> </ul>

*For output signals*

Error	Possible causes	Solution
Signal output outside the valid range	Main electronics module is defective.	Order spare part → <a href="#">163</a> .
Signal output outside the valid current range (< 3.6 mA or > 22 mA)	Main electronics module is defective. I/O electronics module is defective.	Order spare part → <a href="#">163</a> .

Error	Possible causes	Solution
Device shows correct value on local display, but signal output is incorrect, though in the valid range.	Configuration error	Check and correct the parameter configuration.
Device measures incorrectly.	Configuration error or device is operated outside the application.	1. Check and correct parameter configuration. 2. Observe limit values specified in the "Technical Data".

*For access*

Error	Possible causes	Solution
No write access to parameters	Hardware write protection enabled	Set the write protection switch on main electronics module to the <b>Off</b> position → 127.
No write access to parameters	Current user role has limited access authorization	1. Check user role → 56. 2. Enter correct customer-specific access code → 56.
No connection via HART protocol	Communication resistor missing or incorrectly installed.	Install the communication resistor (250 Ω) correctly. Observe the maximum load → 172.
No connection via HART protocol	Commubox ▪ Connected incorrectly ▪ Configured incorrectly ▪ Drivers not installed correctly ▪ USB interface on computer configured incorrectly	Observe the documentation for the Commubox.  FXA195 HART: Document "Technical Information" TI00404F
Not connecting to Web server	Web server disabled	Using the "FieldCare" or "DeviceCare" operating tool, check whether the web server of the measuring device is enabled, and enable it if necessary → 62.
	Incorrect setting for the Ethernet interface of the computer	1. Check the properties of the Internet protocol (TCP/IP) → 59. 2. Check the network settings with the IT manager.
Not connecting to Web server	Incorrect IP address	Check the IP address: 192.168.1.212 → 59
Not connecting to Web server	Incorrect WLAN access data	▪ Check WLAN network status. ▪ Log on to the device again using WLAN access data. ▪ Verify that WLAN is enabled on the measuring device and operating device → 59.
	WLAN communication disabled	–
Not connecting to web server, FieldCare or DeviceCare	No WLAN network available	▪ Check if WLAN reception is present: LED on display module is lit blue ▪ Check if WLAN connection is enabled: LED on display module flashes blue ▪ Switch on instrument function.
Network connection not present or unstable	WLAN network is weak.	▪ Operating device is outside of reception range: Check network status on operating device. ▪ To improve network performance, use an external WLAN antenna.

Error	Possible causes	Solution
	Parallel WLAN and Ethernet communication	<ul style="list-style-type: none"> <li>▪ Check network settings.</li> <li>▪ Temporarily enable only the WLAN as an interface.</li> </ul>
Web browser frozen and operation no longer possible	Data transfer active	Wait until data transfer or current action is finished.
	Connection lost	<ol style="list-style-type: none"> <li>1. Check cable connection and power supply.</li> <li>2. Refresh the Web browser and restart if necessary.</li> </ol>
Content of Web browser incomplete or difficult to read	Not using optimum version of Web server.	<ol style="list-style-type: none"> <li>1. Use the correct Web browser version .</li> <li>2. Clear the Web browser cache and restart the Web browser.</li> </ol>
	Unsuitable view settings.	Change the font size/display ratio of the Web browser.
No or incomplete display of contents in the Web browser	<ul style="list-style-type: none"> <li>▪ JavaScript not enabled</li> <li>▪ JavaScript cannot be enabled</li> </ul>	<ol style="list-style-type: none"> <li>1. Enable JavaScript.</li> <li>2. Enter <a href="http://XXX.XXX.X.XXX/basic.html">http://XXX.XXX.X.XXX/basic.html</a> as the IP address.</li> </ol>
Operation with FieldCare or DeviceCare via CDI-RJ45 service interface (port 8000)	Firewall of computer or network is preventing communication	Depending on the settings of the firewall used on the computer or in the network, the firewall must be adapted or disabled to allow FieldCare/DeviceCare access.
Flashing of firmware with FieldCare or DeviceCare via CDI-RJ45 service interface (via port 8000 or TFTP ports)	Firewall of computer or network is preventing communication	Depending on the settings of the firewall used on the computer or in the network, the firewall must be adapted or disabled to allow FieldCare/DeviceCare access.

## 12.2 Diagnostic information via light emitting diodes

### 12.2.1 Transmitter

Different LEDs in the transmitter provide information on the device status.

- 1 Supply voltage
- 2 Device status
- 3 Not used
- 4 Communication
- 5 Service interface (CDI) active

LED	Color	Meaning
1 Supply voltage	Green	Supply voltage is ok
	Off	Supply voltage is off or too low
2 Device status	Red	Error

LED	Color	Meaning
	Flashing red	Warning
3 Not used	-	-
4 Communication	White	Communication active
5 Service interface (CDI)	Yellow	Connection established
	Flashing yellow	Communication active
	Off	No connection

## 12.3 Diagnostic information on local display

### 12.3.1 Diagnostic message

Faults detected by the self-monitoring system of the measuring device are displayed as a diagnostic message in alternation with the operational display.

Operational display in alarm condition	Diagnostic message
 <p>2 1 XXXXXX XXXXXX <b>AS</b> <b>20.50</b> x ① xx</p>	 <p>XXXXXX <b>AS</b> <b>AS801</b> Supply voltage 3 4 Menu</p>
<p>1 Status signal 2 Diagnostic behavior 3 Diagnostic behavior with diagnostic code 4 Short text 5 Operating elements</p>	

A0029426-EN

If two or more diagnostic events are pending simultaneously, only the message of the diagnostic event with the highest priority is shown.

-  Other diagnostic events that have occurred can be displayed in the **Diagnostics** menu:
- Via parameter
  - Via submenus →  156

#### Status signals

The status signals provide information on the state and reliability of the device by categorizing the cause of the diagnostic information (diagnostic event).

-  The status signals are categorized according to VDI/VDE 2650 and NAMUR Recommendation NE 107: F = Failure, C = Function Check, S = Out of Specification, M = Maintenance Required

Symbol	Meaning
<b>F</b>	<b>Failure</b> A device error has occurred. The measured value is no longer valid.
<b>C</b>	<b>Function check</b> The device is in service mode (e.g. during a simulation).
<b>S</b>	<b>Out of specification</b> The device is operated: <ul style="list-style-type: none"><li>▪ Outside its technical specification limits (e.g. outside the process temperature range)</li><li>▪ Outside of the configuration carried out by the user (e.g. maximum flow in parameter 20 mA value)</li></ul>
<b>M</b>	<b>Maintenance required</b> Maintenance is required. The measured value remains valid.

## Diagnostic behavior

Symbol	Meaning
	<b>Alarm</b> <ul style="list-style-type: none"> <li>▪ Measurement is interrupted.</li> <li>▪ Signal outputs and totalizers assume the defined alarm condition.</li> <li>▪ A diagnostic message is generated.</li> </ul>
	<b>Warning</b> Measurement is resumed. The signal outputs and totalizers are not affected. A diagnostic message is generated.

## Diagnostic information

The fault can be identified using the diagnostic information. The short text helps you by providing information about the fault. In addition, the corresponding symbol for the diagnostic behavior is displayed in front of the diagnostic information on the local display.

## Operating elements

Key	Meaning
	<b>Plus key</b> <i>In a menu, submenu</i> Opens the message about remedy information.
	<b>Enter key</b> <i>In a menu, submenu</i> Opens the operating menu.

### 12.3.2 Calling up remedial measures

28 Message for remedial measures

- 1 Diagnostic information
- 2 Short text
- 3 Service ID
- 4 Diagnostic behavior with diagnostic code
- 5 Operation time of occurrence
- 6 Remedial measures

The user is in the diagnostic message.

- 1 Press **①** (① symbol).  
↳ The **Diagnostic list** submenu opens.
- 2 Select the desired diagnostic event with **+** or **-** and press **E**.  
↳ The message for the remedial measures for the selected diagnostic event opens.
- 3 Press **-** + **+** simultaneously.  
↳ The message for the remedial measures closes.

The user is in the **Diagnostics** menu at an entry for a diagnostics event, e.g. in the **Diagnostic list** submenu or **Previous diagnostics** parameter.

- 1 Press **E**.  
↳ The message for the remedial measures for the selected diagnostic event opens.
- 2 Press **-** + **+** simultaneously.  
↳ The message for the remedial measures closes.

## 12.4 Diagnostic information in the Web browser

### 12.4.1 Diagnostic options

Any faults detected by the measuring device are displayed in the Web browser on the home page once the user has logged on.

- 1 Status area with status signal  
 2 Diagnostic information → [146](#)  
 3 Remedy information with Service ID

**i** In addition, diagnostic events which have occurred can be shown in the **Diagnostics** menu:

- Via parameter
- Via submenu → [156](#)

### Status signals

The status signals provide information on the state and reliability of the device by categorizing the cause of the diagnostic information (diagnostic event).

Symbol	Meaning
	<b>Failure</b> A device error has occurred. The measured value is no longer valid.
	<b>Function check</b> The device is in service mode (e.g. during a simulation).
	<b>Out of specification</b> The device is operated: <ul style="list-style-type: none"> <li>▪ Outside its technical specification limits (e.g. outside the process temperature range)</li> <li>▪ Outside of the configuration carried out by the user (e.g. maximum flow in parameter 20 mA value)</li> </ul>
	<b>Maintenance required</b> Maintenance is required. The measured value is still valid.

**i** The status signals are categorized in accordance with VDI/VDE 2650 and NAMUR Recommendation NE 107.

### 12.4.2 Calling up remedy information

Remedy information is provided for every diagnostic event to ensure that problems can be rectified quickly. These measures are displayed in red along with the diagnostic event and the related diagnostic information.

## 12.5 Diagnostic information in DeviceCare or FieldCare

### 12.5.1 Diagnostic options

Any faults detected by the measuring device are displayed on the home page of the operating tool once the connection has been established.

A0021799-EN

- 1 Status area with status signal → 145
- 2 Diagnostic information → 146
- 3 Remedy information with Service ID

**i** In addition, diagnostic events which have occurred can be shown in the **Diagnostics** menu:

- Via parameter
- Via submenu → 156

### Diagnostic information

The fault can be identified using the diagnostic information. The short text helps you by providing information about the fault. In addition, the corresponding symbol for the diagnostic behavior is displayed in front of the diagnostic information on the local display.

### 12.5.2 Calling up remedy information

Remedy information is provided for every diagnostic event to ensure that problems can be rectified quickly:

- On the home page  
Remedy information is displayed in a separate field below the diagnostics information.
- In the **Diagnostics** menu  
Remedy information can be called up in the working area of the user interface.

The user is in the **Diagnostics** menu.

1. Call up the desired parameter.
2. On the right in the working area, mouse over the parameter.  
↳ A tool tip with remedy information for the diagnostic event appears.

## 12.6 Adapting the diagnostic information

### 12.6.1 Adapting the diagnostic behavior

Each item of diagnostic information is assigned a specific diagnostic behavior at the factory. The user can change this assignment for specific diagnostic information in the **Diagnostic behavior** submenu.

Expert → System → Diagnostic handling → Diagnostic behavior

29 Taking the example of the local display

You can assign the following options to the diagnostic number as the diagnostic behavior:

Options	Description
Alarm	The device stops measurement. The signal outputs and totalizers assume the defined alarm condition. A diagnostic message is generated. The background lighting changes to red.
Warning	The device continues to measure. The signal outputs and totalizers are not affected. A diagnostic message is generated.
Logbook entry only	The device continues to measure. The diagnostic message is displayed only in the <b>Event logbook</b> submenu ( <b>Event list</b> submenu) and is not displayed in alternation with the operational display.
Off	The diagnostic event is ignored, and no diagnostic message is generated or entered.

### 12.6.2 Adapting the status signal

Each item of diagnostic information is assigned a specific status signal at the factory. The user can change this assignment for specific diagnostic information in the **Diagnostic event category** submenu.

Expert → Communication → Diagnostic event category

### Available status signals

Configuration as per HART 7 Specification (Condensed Status), in accordance with NAMUR NE107.

Symbol	Meaning
<b>F</b> A0013956	<b>Failure</b> A device error is present. The measured value is no longer valid.
<b>C</b> A0013959	<b>Function check</b> The device is in service mode (e.g. during a simulation).
<b>S</b> A0013958	<b>Out of specification</b> The device is being operated: ■ Outside its technical specification limits (e.g. outside the process temperature range) ■ Outside of the configuration carried out by the user (e.g. maximum flow in parameter 20 mA value)
<b>M</b> A0013957	<b>Maintenance required</b> Maintenance is required. The measured value is still valid.
<b>N</b> A0023076	Has no effect on the condensed status.

## 12.7 Overview of diagnostic information

- i** The amount of diagnostic information and the number of measured variables affected increase if the measuring device has one or more application packages.
- i** In the case of some items of diagnostic information, the status signal and the diagnostic behavior can be changed. Change the diagnostic information → 150

Diagnostic number	Short text	Remedy instructions	Status signal [from the factory]	Diagnostic behavior [from the factory]
<b>Diagnostic of sensor</b>				
022	Temperature sensor defective	1. Check or replace sensor electronic module (ISEM) 2. If available: Check connection cable between sensor and transmitter 3. Replace sensor	F	Alarm
046	Sensor limit exceeded	1. Inspect sensor 2. Check process condition	S	Alarm <sup>1)</sup>
062	Sensor connection faulty	1. Check or replace sensor electronic module (ISEM) 2. If available: Check connection cable between sensor and transmitter 3. Replace sensor	F	Alarm
063	Exciter current faulty	1. Check or replace sensor electronic module (ISEM) 2. If available: Check connection cable between sensor and transmitter 3. Replace sensor	S	Alarm
082	Data storage	1. Check module connections 2. Contact service	F	Alarm

Diagnostic number	Short text	Remedy instructions	Status signal [from the factory]	Diagnostic behavior [from the factory]
083	Memory content	1. Restart device 2. Restore HistoROM S-DAT backup ('Device reset' parameter) 3. Replace HistoROM S-DAT	F	Alarm
140	Sensor signal asymmetrical	1. Check or replace sensor electronic module (ISEM) 2. If available: Check connection cable between sensor and transmitter 3. Replace sensor	S	Alarm <sup>1)</sup>
144	Measuring error too high	1. Check or change sensor 2. Check process conditions	F	Alarm <sup>1)</sup>
<b>Diagnostic of electronic</b>				
201	Device failure	1. Restart device 2. Contact service	F	Alarm
242	Software incompatible	1. Check software 2. Flash or change main electronics module	F	Alarm
252	Modules incompatible	1. Check electronic modules 2. Change electronic modules	F	Alarm
262	Sensor electronic connection faulty	1. Check or replace connection cable between sensor electronic module (ISEM) and main electronics 2. Check or replace ISEM or main electronics	F	Alarm
270	Main electronic failure	Change main electronic module	F	Alarm
271	Main electronic failure	1. Restart device 2. Change main electronic module	F	Alarm
272	Main electronic failure	1. Restart device 2. Contact service	F	Alarm
273	Main electronic failure	Change electronic	F	Alarm
275	I/O module 1 to n defective	Change I/O module	F	Alarm
276	I/O module 1 to n faulty	1. Restart device 2. Change I/O module	F	Alarm
283	Memory content	1. Reset device 2. Contact service	F	Alarm
302	Device verification active	Device verification active, please wait.	C	Warning
311	Electronic failure	1. Do not reset device 2. Contact service	M	Warning
332	Writing in embedded HistoROM failed	Replace user interface board Ex d/XP: replace transmitter	F	Alarm
361	I/O module 1 to n faulty	1. Restart device 2. Check electronic modules 3. Change I/O Modul or main electronics	F	Alarm
372	Sensor electronic (ISEM) faulty	1. Restart device 2. Check if failure recurs 3. Replace sensor electronic module (ISEM)	F	Alarm
373	Sensor electronic (ISEM) faulty	1. Transfer data or reset device 2. Contact service	F	Alarm

Diagnostic number	Short text	Remedy instructions	Status signal [from the factory]	Diagnostic behavior [from the factory]
374	Sensor electronic (ISEM) faulty	1. Restart device 2. Check if failure recurs 3. Replace sensor electronic module (ISEM)	S	Warning <sup>1)</sup>
375	I/O- 1 to n communication failed	1. Restart device 2. Check if failure recurs 3. Replace module rack inclusive electronic modules	F	Alarm

910	Tubes not oscillating	1. Check electronic 2. Inspect sensor	F	Alarm
912	Medium inhomogeneous	1. Check process cond. 2. Increase system pressure	S	Warning <sup>1)</sup>
913	Medium unsuitable	1. Check process conditions 2. Check electronic modules or sensor	S	Alarm <sup>1)</sup>
944	Monitoring failed	Check process conditions for Heartbeat Monitoring	S	Warning <sup>1)</sup>
948	Oscillation damping too high	Check process conditions	S	Warning <sup>1)</sup>

1) Diagnostic behavior can be changed.

## 12.8 Pending diagnostic events

The **Diagnostics** menu allows the user to view the current diagnostic event and the previous diagnostic event separately.

 To call up the measures to rectify a diagnostic event:

- Via local display → [147](#)
- Via Web browser → [148](#)
- Via "FieldCare" operating tool → [150](#)
- Via "DeviceCare" operating tool → [150](#)

 Other pending diagnostic events can be displayed in the **Diagnostic list** submenu → [156](#)

### Navigation

"Diagnostics" menu

### Parameter overview with brief description

Parameter	Prerequisite	Description	User interface
Actual diagnostics	A diagnostic event has occurred.	Shows the current occurred diagnostic event along with its diagnostic information.  ⓘ If two or more messages occur simultaneously, the message with the highest priority is shown on the display.	Symbol for diagnostic behavior, diagnostic code and short message.
Previous diagnostics	Two diagnostic events have already occurred.	Shows the diagnostic event that occurred prior to the current diagnostic event along with its diagnostic information.	Symbol for diagnostic behavior, diagnostic code and short message.
Operating time from restart	–	Shows the time the device has been in operation since the last device restart.	Days (d), hours (h), minutes (m) and seconds (s)
Operating time	–	Indicates how long the device has been in operation.	Days (d), hours (h), minutes (m) and seconds (s)

## 12.9 Diagnostic list

Up to 5 currently pending diagnostic events can be displayed in the **Diagnostic list** submenu along with the associated diagnostic information. If more than 5 diagnostic events are pending, the events with the highest priority are shown on the display.

#### Navigation path

Diagnostics → Diagnostic list

A0014006-EN

图 30 Taking the example of the local display

ⓘ To call up the measures to rectify a diagnostic event:

- Via local display → 147
- Via Web browser → 148
- Via "FieldCare" operating tool → 150
- Via "DeviceCare" operating tool → 150

## 12.10 Event logbook

### 12.10.1 Event history

A chronological overview of the event messages that have occurred is provided in the **Events list** submenu.

#### Navigation path

Diagnostics menu → **Event logbook** submenu → Event list

31 Taking the example of the local display

- Max. 20 event messages can be displayed in chronological order.
- If the **Extended HistoROM** application package (order option) is enabled in the device, the event list can contain up to 100 entries .

The event history includes entries for:

- Diagnostic events → 151
- Information events → 157

In addition to the operation time of its occurrence, each event is also assigned a symbol that indicates whether the event has occurred or is ended:

- Diagnostic event
  - ⊖: Occurrence of the event
  - ⊕: End of the event
- Information event
  - ⊖: Occurrence of the event

To call up the measures to rectify a diagnostic event:

- Via local display → 147
- Via Web browser → 148
- Via "FieldCare" operating tool → 150
- Via "DeviceCare" operating tool → 150

For filtering the displayed event messages → 157

### 12.10.2 Filtering the event logbook

Using the **Filter options** parameter you can define which category of event message is displayed in the **Events list** submenu.

#### Navigation path

Diagnostics → Event logbook → Filter options

#### Filter categories

- All
- Failure (F)
- Function check (C)
- Out of specification (S)
- Maintenance required (M)
- Information (I)

### 12.10.3 Overview of information events

Unlike a diagnostic event, an information event is displayed in the event logbook only and not in the diagnostic list.

Info number	Info name
I1000	----- (Device ok)
I1079	Sensor changed
I1089	Power on
I1090	Configuration reset
I1091	Configuration changed

Info number	Info name
I1092	Embedded HistoROM deleted
I1111	Density adjust failure
I1137	Electronic changed
I1151	History reset
I1155	Reset electronic temperature
I1156	Memory error trend
I1157	Memory error event list
I1184	Display connected
I1209	Density adjustment ok
I1221	Zero point adjust failure
I1222	Zero point adjustment ok
I1256	Display: access status changed
I1264	Safety sequence aborted
I1278	I/O module reset detected
I1335	Firmware changed
I1361	Web server login failed
I1397	Fieldbus: access status changed
I1398	CDI: access status changed
I1444	Device verification passed
I1445	Device verification failed
I1447	Record application reference data
I1448	Application reference data recorded
I1449	Recording application ref. data failed
I1450	Monitoring off
I1451	Monitoring on
I1457	Measured error verification failed
I1459	I/O module verification failed
I1460	HBSI verification failed
I1461	Sensor verification failed
I1462	Sensor electronic module verific. failed
I1512	Download started
I1513	Download finished
I1514	Upload started
I1515	Upload finished
I1517	Custody transfer active
I1518	Custody transfer inactive
I1554	Safety sequence started
I1555	Safety sequence confirmed
I1556	Safety mode off
I1618	I/O module replaced
I1619	I/O module replaced
I1621	I/O module replaced
I1622	Calibration changed

Info number	Info name
I1624	Reset all totalizers
I1625	Write protection activated
I1626	Write protection deactivated
I1627	Web server login successful
I1628	Display login successful
I1629	CDI login successful
I1631	Web server access changed
I1632	Display login failed
I1633	CDI login failed
I1634	Parameter factory reset
I1635	Parameter delivery reset
I1639	Max. switch cycles number reached
I1643	Custody transfer logbook cleared
I1649	Hardware write protection activated
I1650	Hardware write protection deactivated
I1651	Custody transfer parameter changed
I1712	New flash file received
I1725	Sensor electronic module (ISEM) changed
I1726	Configuration backup failed

## 12.11 Resetting the measuring device

Using the **Device reset** parameter (→ 123) it is possible to reset the entire device configuration or some of the configuration to a defined state.

### 12.11.1 Function scope of the "Device reset" parameter

Options	Description
Cancel	No action is executed and the user exits the parameter.
To delivery settings	Every parameter for which a customer-specific default setting was ordered is reset to this customer-specific value. All other parameters are reset to the factory setting.
Restart device	The restart resets every parameter whose data are in the volatile memory (RAM) to the factory setting (e.g. measured value data). The device configuration remains unchanged.
Restore S-DAT backup	Restore the data that are saved on the S-DAT. The data record is restored from the electronics memory to the S-DAT.

## 12.12 Device information

The **Device information** submenu contains all parameters that display different information for device identification.

**Navigation**

"Diagnostics" menu → Device information

► Device information	
Device tag	→ <a href="#">160</a>
Serial number	→ <a href="#">160</a>
Firmware version	→ <a href="#">160</a>
Device name	→ <a href="#">160</a>
Order code	→ <a href="#">160</a>
Extended order code 1	→ <a href="#">161</a>
Extended order code 2	→ <a href="#">161</a>
Extended order code 3	→ <a href="#">161</a>
ENP version	→ <a href="#">161</a>
Device revision	→ <a href="#">161</a>
Device ID	→ <a href="#">161</a>
Device type	→ <a href="#">161</a>
Manufacturer ID	→ <a href="#">161</a>

**Parameter overview with brief description**

Parameter	Description	User interface	Factory setting
Device tag	Shows name of measuring point.	Max. 32 characters, such as letters, numbers or special characters (e.g. @, %, /).	Promass300/500
Serial number	Shows the serial number of the measuring device.	A maximum of 11-digit character string comprising letters and numbers.	-
Firmware version	Shows the device firmware version installed.	Character string in the format xx.yy.zz	-
Device name	Shows the name of the transmitter.  The name can be found on the nameplate of the transmitter.	Promass300/500	-
Order code	Shows the device order code.  The order code can be found on the nameplate of the sensor and transmitter in the "Order code" field.	Character string composed of letters, numbers and certain punctuation marks (e.g. /).	-

Parameter	Description	User interface	Factory setting
Extended order code 1	Shows the 1st part of the extended order code.  The extended order code can also be found on the nameplate of the sensor and transmitter in the "Ext. ord. cd." field.	Character string	-
Extended order code 2	Shows the 2nd part of the extended order code.  The extended order code can also be found on the nameplate of the sensor and transmitter in the "Ext. ord. cd." field.	Character string	-
Extended order code 3	Shows the 3rd part of the extended order code.  The extended order code can also be found on the nameplate of the sensor and transmitter in the "Ext. ord. cd." field.	Character string	-
ENP version	Shows the version of the electronic nameplate (ENP).	Character string	2.02.00
Device revision	Shows the device revision with which the device is registered with the HART Communication Foundation.	2-digit hexadecimal number	1
Device ID	Shows the device ID for identifying the device in a HART network.	6-digit hexadecimal number	-
Device type	Shows the device type with which the measuring device is registered with the HART Communication Foundation.	2-digit hexadecimal number	0x3B (for Promass 300/500)
Manufacturer ID	Shows the manufacturer ID device is registered with the HART Communication Foundation.	2-digit hexadecimal number	0x11 (for Endress+Hauser)

## 12.13 Firmware history

Release date	Firmware version	Order code for "Firmware version"	Firmware changes	Documentation type	Documentation
08.2016	01.00.zz	Option 78	Original firmware	Operating Instructions	BA01487D/06/EN/01.16

 It is possible to flash the firmware to the current version or the previous version using the service interface.

 For the compatibility of the firmware version with the previous version, the installed device description files and operating tools, observe the information about the device in the "Manufacturer's information" document.

 The manufacturer's information is available:

- In the Download Area of the Endress+Hauser web site: [www.endress.com](http://www.endress.com) → Downloads
- Specify the following details:
  - Product root, e.g. 8E3B
  - Text search: Manufacturer's information
  - Media type: Documentation – Technical Documentation

## 13 Maintenance

### 13.1 Maintenance tasks

No special maintenance work is required.

#### 13.1.1 Exterior cleaning

When cleaning the exterior of measuring devices, always use cleaning agents that do not attack the surface of the housing or the seals.

#### 13.1.2 Interior cleaning

Observe the following points for CIP and SIP cleaning:

- Use only cleaning agents to which the process-wetted materials are adequately resistant.
- Observe the maximum permitted medium temperature for the measuring device  
→ [184](#).

Observe the following point for cleaning with pigs:

Observe the inside diameter of the measuring tube and process connection.

### 13.2 Measuring and test equipment

Endress+Hauser offers a wide variety of measuring and test equipment, such as W@M or device tests.

 Your Endress+Hauser Sales Center can provide detailed information on the services.

List of some of the measuring and testing equipment: → [165](#)

### 13.3 Endress+Hauser services

Endress+Hauser offers a wide variety of services for maintenance such as recalibration, maintenance service or device tests.

 Your Endress+Hauser Sales Center can provide detailed information on the services.

## 14 Repairs

### 14.1 General notes

#### 14.1.1 Repair and conversion concept

The Endress+Hauser repair and conversion concept provides for the following:

- The measuring devices have a modular design.
- Spare parts are grouped into logical kits with the associated Installation Instructions.
- Repairs are carried out by Endress+Hauser Service or by appropriately trained customers.
- Certified devices can only be converted to other certified devices by Endress+Hauser Service or at the factory.

#### 14.1.2 Notes for repair and conversion

For repair and modification of a measuring device, observe the following notes:

- ▶ Use only original Endress+Hauser spare parts.
- ▶ Carry out the repair according to the Installation Instructions.
- ▶ Observe the applicable standards, federal/national regulations, Ex documentation (XA) and certificates.
- ▶ Document every repair and each conversion and enter them into the *W@M* life cycle management database.

### 14.2 Spare parts

*W@M Device Viewer* ([www.endress.com/deviceviewer](http://www.endress.com/deviceviewer)):

All the spare parts for the measuring device, along with the order code, are listed here and can be ordered. If available, users can also download the associated Installation Instructions.

Measuring device serial number:

- Is located on the nameplate of the device.
- Can be read out via the **Serial number** parameter (→ 160) in the **Device information** submenu.

### 14.3 Endress+Hauser services

Endress+Hauser offers a wide range of services.

Your Endress+Hauser Sales Center can provide detailed information on the services.

### 14.4 Return

The measuring device must be returned if it is need of repair or a factory calibration, or if the wrong measuring device has been delivered or ordered. Legal specifications require Endress+Hauser, as an ISO-certified company, to follow certain procedures when handling products that are in contact with the medium.

To ensure safe, swift and professional device returns, please refer to the procedure and conditions for returning devices provided on the Endress+Hauser website at <http://www.endress.com/support/return-material>

## 14.5 Disposal

### 14.5.1 Removing the measuring device

1. Switch off the device.

#### **WARNING**

##### **Danger to persons from process conditions.**

- ▶ Beware of hazardous process conditions such as pressure in the measuring device, high temperatures or aggressive fluids.

2. Carry out the mounting and connection steps from the "Mounting the measuring device" and "Connecting the measuring device" sections in reverse order. Observe the safety instructions.

### 14.5.2 Disposing of the measuring device

#### **WARNING**

##### **Danger to personnel and environment from fluids that are hazardous to health.**

- ▶ Ensure that the measuring device and all cavities are free of fluid residues that are hazardous to health or the environment, e.g. substances that have permeated into crevices or diffused through plastic.

Observe the following notes during disposal:

- ▶ Observe valid federal/national regulations.
- ▶ Ensure proper separation and reuse of the device components.

## 15 Accessories

Various accessories, which can be ordered with the device or subsequently from Endress +Hauser, are available for the device. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: [www.endress.com](http://www.endress.com).

### 15.1 Device-specific accessories

#### 15.1.1 For the transmitter

Accessories	Description
Promass 300 transmitter	<p>Transmitter for replacement or storage. Use the order code to define the following specifications:</p> <ul style="list-style-type: none"> <li>▪ Approvals</li> <li>▪ Output</li> <li>▪ Input</li> <li>▪ Display / operation</li> <li>▪ Housing</li> <li>▪ Software</li> </ul>  For details, see Installation Instructions EA01150
Remote display and operating module DKX001	<p>The remote display and operating module DKX001 is available as an optional extra: Order code for "Display; operation", option O "Separate backlit, 4-line display; 10 m (30 ft) Cable; touch control"</p> <p>The remote display and operating module DKX001 can also be ordered separately and subsequently as an accessory without a measuring device .</p>  Further information on display and operating module DKX001 →  190.
WLAN antenna Wide range	 External WLAN antenna for a range of up to 50 m (165 ft).
Protective cover	<p>Is used to protect the measuring device from the effects of the weather: e.g. rainwater, excess heating from direct sunlight.</p>  For details, see Installation Instructions EA01160

#### 15.1.2 For the sensor

Accessories	Description
Heating jacket	<p>Is used to stabilize the temperature of the fluids in the sensor. Water, water vapor and other non-corrosive liquids are permitted for use as fluids. If using oil as a heating medium, please consult with Endress+Hauser.</p>  For details, see Operating Instructions BA00099D

### 15.2 Communication-specific accessories

Accessories	Description
Commubox FXA195 HART	<p>For intrinsically safe HART communication with FieldCare via the USB interface.</p>  For details, see "Technical Information" TI00404F

HART Loop Converter HMX50	<p>Is used to evaluate and convert dynamic HART process variables to analog current signals or limit values.</p> <p> For details, see "Technical Information" TI00429F and Operating Instructions BA00371F</p>
Fieldgate FXA320	<p>Gateway for the remote monitoring of connected 4 to 20 mA measuring devices via a Web browser.</p> <p> For details, see "Technical Information" TI00025S and Operating Instructions BA00053S</p>
Fieldgate FXA520	<p>Gateway for the remote diagnostics and remote configuration of connected HART measuring devices via a Web browser.</p> <p> For details, see "Technical Information" TI00025S and Operating Instructions BA00051S</p>
Field Xpert SFX350	<p>Field Xpert SFX350 is a mobile computer for commissioning and maintenance. It enables efficient device configuration and diagnostics for HART and FOUNDATION Fieldbus devices in the <b>non-Ex area</b>.</p> <p> For details, see Operating Instructions BA01202S</p>
Field Xpert SFX370	<p>Field Xpert SFX370 is a mobile computer for commissioning and maintenance. It enables efficient device configuration and diagnostics for HART and FOUNDATION Fieldbus devices in the <b>non-Ex area</b> and the <b>Ex area</b>.</p> <p> For details, see Operating Instructions BA01202S</p>

### 15.3 Service-specific accessories

Accessories	Description
Applicator	<p>Software for selecting and sizing Endress+Hauser measuring devices:</p> <ul style="list-style-type: none"> <li>▪ Choice of measuring devices for industrial requirements</li> <li>▪ Calculation of all the necessary data for identifying the optimum flowmeter: e.g. nominal diameter, pressure loss, flow velocity and accuracy.</li> <li>▪ Graphic illustration of the calculation results</li> <li>▪ Determination of the partial order code, administration, documentation and access to all project-related data and parameters over the entire life cycle of a project.</li> </ul> <p>Applicator is available:</p> <ul style="list-style-type: none"> <li>▪ Via the Internet: <a href="https://wapps.endress.com/applicator">https://wapps.endress.com/applicator</a></li> <li>▪ As a downloadable DVD for local PC installation.</li> </ul>
W@M	<p>W@M Life Cycle Management</p> <p>Improved productivity with information at your fingertips. Data relevant to a plant and its components is generated from the first stages of planning and during the asset's complete life cycle.</p> <p>W@M Life Cycle Management is an open and flexible information platform with online and on-site tools. Instant access for your staff to current, in-depth data shortens your plant's engineering time, speeds up procurement processes and increases plant uptime.</p> <p>Combined with the right services, W@M Life Cycle Management boosts productivity in every phase. For more information, visit <a href="http://www.endress.com/lifecyclemangement">www.endress.com/lifecyclemangement</a></p>
FieldCare	<p>FDT-based plant asset management tool from Endress+Hauser.</p> <p>It can configure all smart field units in your system and helps you manage them. By using the status information, it is also a simple but effective way of checking their status and condition.</p> <p> For details, see Operating Instructions BA00027S and BA00059S</p>
DeviceCare	<p>Tool for connecting and configuring Endress+Hauser field devices.</p> <p> For details, see Innovation brochure IN01047S</p>

## 15.4 System components

Accessories	Description
Memograph M graphic display recorder	<p>The Memograph M graphic display recorder provides information on all relevant measured variables. Measured values are recorded correctly, limit values are monitored and measuring points analyzed. The data are stored in the 256 MB internal memory and also on a SD card or USB stick.</p>  For details, see "Technical Information" TI00133R and Operating Instructions BA00247R
Cerabar M	<p>The pressure transmitter for measuring the absolute and gauge pressure of gases, steam and liquids. It can be used to read in the operating pressure value.</p>  For details, see "Technical Information" TI00426P, TI00436P and Operating Instructions BA00200P, BA00382P
Cerabar S	<p>The pressure transmitter for measuring the absolute and gauge pressure of gases, steam and liquids. It can be used to read in the operating pressure value.</p>  For details, see "Technical Information" TI00383P and Operating Instructions BA00271P
iTEMP	<p>The temperature transmitters can be used in all applications and are suitable for the measurement of gases, steam and liquids. They can be used to read in the fluid temperature.</p>  For details, see "Fields of Activity", FA00006T

## 16 Technical data

### 16.1 Application

The measuring device is suitable for flow measurement of liquids and gases only.

Depending on the version ordered, the measuring device can also measure potentially explosive, flammable, poisonous and oxidizing media.

To ensure that the device remains in proper operating condition for its service life, use the measuring device only for media against which the process-wetted materials are sufficiently resistant.

### 16.2 Function and system design

---

Measuring principle	Mass flow measurement based on the Coriolis measuring principle
---------------------	---

---

Measuring system	<p>The device consists of a transmitter and a sensor. The device is available as a compact version: The transmitter and sensor form a mechanical unit. For information on the structure of the device →  14</p>
------------------	--

## 16.3 Input

Measured variable	<b>Direct measured variables</b> <ul style="list-style-type: none"> <li>■ Mass flow</li> <li>■ Density</li> <li>■ Temperature</li> <li>■ Viscosity</li> </ul> <b>Calculated measured variables</b> <ul style="list-style-type: none"> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> <li>■ Reference density</li> </ul>

### Measuring ranges for gases

The full scale values depend on the density of the gas and can be calculated with the formula below:

$$\dot{m}_{\max(G)} = \dot{m}_{\max(F)} \cdot \rho_G : x$$

$\dot{m}_{\max(G)}$	Maximum full scale value for gas [kg/h]
$\dot{m}_{\max(F)}$	Maximum full scale value for liquid [kg/h]
$\dot{m}_{\max(G)} < \dot{m}_{\max(F)}$	$\dot{m}_{\max(G)}$ can never be greater than $\dot{m}_{\max(F)}$
$\rho_G$	Gas density in [kg/m <sup>3</sup> ] at operating conditions
$x$	Constant dependent on nominal diameter

DN	x
[mm]	[kg/m <sup>3</sup> ]
8	60
15	80
15 FB	90

[mm]	DN	x [kg/m <sup>3</sup> ]

25	1	90
25 FB	1 FB	90
40	1½	90
40 FB	1½ FB	90
50	2	90
50 FB	2 FB	110
80	3	110

FB = Full bore

### Calculation example for gas

- Sensor: Promass I, DN 50
- Gas: Air with a density of 60.3 kg/m<sup>3</sup> (at 20 °C and 50 bar)
- Measuring range (liquid): 70 000 kg/h
- x = 90 kg/m<sup>3</sup> (for Promass I, DN 50)

Maximum possible full scale value:

$$\dot{m}_{\max(G)} = \dot{m}_{\max(F)} \cdot \rho_G : x = 70\,000 \text{ kg/h} \cdot 60.3 \text{ kg/m}^3 : 90 \text{ kg/m}^3 = 46\,900 \text{ kg/h}$$

### Recommended measuring range

"Flow limit" section →  185

Operable flow range

Over 1000 : 1.

Flow rates above the preset full scale value do not override the electronics unit, with the result that the totalizer values are registered correctly.

Input signal

### External measured values

To increase the accuracy of certain measured variables or to calculate the corrected volume flow for gases, the automation system can continuously write different measured values to the measuring device:

- Operating pressure to increase accuracy (Endress+Hauser recommends the use of a pressure measuring device for absolute pressure, e.g. Cerabar M or Cerabar S)
- Fluid temperature to increase accuracy (e.g. iTEMP)
- Reference density for calculating the corrected volume flow for gases

 Various pressure transmitters and temperature measuring devices can be ordered from Endress+Hauser: see "Accessories" section →  167

It is recommended to read in external measured values to calculate the following measured variables for gases:

- Mass flow
- Corrected volume flow

### HART protocol

The measured values are written from the automation system to the measuring device via the HART protocol. The pressure transmitter must support the following protocol-specific functions:

- HART protocol
- Burst mode

### *Current input*

The measured values are written from the automation system to the measuring device via the current input → 171.

#### **Current input 0/4 to 20 mA**

<b>Current input</b>	0/4 to 20 mA (active/passive)
<b>Current span</b>	<ul style="list-style-type: none"> <li>■ 4 to 20 mA (active)</li> <li>■ 0/4 to 20 mA (passive)</li> </ul>
<b>Resolution</b>	1 µA
<b>Voltage drop</b>	Typically: 0.6 to 2 V for 3.6 to 22 mA (passive)
<b>Maximum input voltage</b>	≤ 30 V (passive)
<b>Open-circuit voltage</b>	≤ 28.8 V (active)
<b>Possible input variables</b>	<ul style="list-style-type: none"> <li>■ Pressure</li> <li>■ Temperature</li> <li>■ Density</li> </ul>

#### **Status input**

<b>Maximum input values</b>	<ul style="list-style-type: none"> <li>■ DC -3 to 30 V</li> <li>■ If status input is active (ON): <math>R_i &gt; 3 \text{ k}\Omega</math></li> </ul>
<b>Response time</b>	Adjustable: 5 to 200 ms
<b>Input signal level</b>	<ul style="list-style-type: none"> <li>■ Low signal: DC -3 to +5 V</li> <li>■ High signal: DC 12 to 30 V</li> </ul>
<b>Assignable functions</b>	<ul style="list-style-type: none"> <li>■ Off</li> <li>■ Reset the individual totalizers separately</li> <li>■ Reset all totalizers</li> <li>■ Flow override</li> </ul>

## 16.4 Output

Output signal

**HART current output**

<b>Current output</b>	4 to 20 mA HART
<b>Current span</b>	Can be set to: 4 to 20 mA (active/passive)
<b>Open-circuit voltage</b>	DC 28.8 V (active)
<b>Maximum input voltage</b>	DC 30 V (passive)
<b>Load</b>	250 to 700 Ω
<b>Resolution</b>	0.38 µA
<b>Damping</b>	Adjustable: 0.07 to 999 s
<b>Assignable measured variables</b>	<ul style="list-style-type: none"> <li>▪ Mass flow</li> <li>▪ Volume flow</li> <li>▪ Corrected volume flow</li> <li>▪ Density</li> <li>▪ Reference density</li> <li>▪ Temperature</li> </ul> <p> The range of options increases if the measuring device has one or more application packages.</p>

### Current output 0/4 to 20 mA

<b>Current output</b>	0/4 to 20 mA
<b>Maximum output values</b>	22.5 mA
<b>Current span</b>	Can be set to: <ul style="list-style-type: none"> <li>▪ 4 to 20 mA (active)</li> <li>▪ 0/4 to 20 mA (passive)</li> </ul>
<b>Open-circuit voltage</b>	DC 28.8 V (active)
<b>Maximum input voltage</b>	DC 30 V (passive)
<b>Load</b>	0 to 700 Ω
<b>Resolution</b>	0.38 µA
<b>Damping</b>	Adjustable: 0.07 to 999 s
<b>Assignable measured variables</b>	<ul style="list-style-type: none"> <li>▪ Mass flow</li> <li>▪ Volume flow</li> <li>▪ Corrected volume flow</li> <li>▪ Density</li> <li>▪ Reference density</li> <li>▪ Temperature</li> </ul> <p> The range of options increases if the measuring device has one or more application packages.</p>

### Pulse/frequency/switch output

<b>Function</b>	Can be set to pulse, frequency or switch output
<b>Version</b>	Open collector  Can be set to: <ul style="list-style-type: none"> <li>▪ Active</li> <li>▪ Passive</li> </ul>
<b>Maximum input values</b>	DC 30 V, 250 mA (passive)
<b>Open-circuit voltage</b>	DC 28.8 V (active)
<b>Voltage drop</b>	For 22.5 mA: ≤ DC 2 V

<b>Pulse output</b>	
<b>Maximum input values</b>	DC 30 V, 250 mA (passive)
<b>Maximum output current</b>	22.5 mA (active)
<b>Open-circuit voltage</b>	DC 28.8 V (active)
<b>Pulse width</b>	Adjustable: 0.05 to 2 000 ms
<b>Maximum pulse rate</b>	10 000 Impulse/s
<b>Pulse value</b>	Adjustable
<b>Assignable measured variables</b>	<ul style="list-style-type: none"> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> <li>■ Density</li> <li>■ Reference density</li> <li>■ Temperature</li> </ul>
<b>Frequency output</b>	
<b>Maximum input values</b>	DC 30 V, 250 mA (passive)
<b>Maximum output current</b>	22.5 mA (active)
<b>Open-circuit voltage</b>	DC 28.8 V (active)
<b>Output frequency</b>	Adjustable: end value frequency 2 to 10 000 Hz ( $f_{\max} = 12\,500$ Hz)
<b>Damping</b>	Adjustable: 0 to 999 s
<b>Pulse/pause ratio</b>	1:1
<b>Assignable measured variables</b>	<ul style="list-style-type: none"> <li>■ Mass flow</li> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> <li>■ Density</li> <li>■ Reference density</li> <li>■ Temperature</li> </ul> <p> The range of options increases if the measuring device has one or more application packages.</p>
<b>Switch output</b>	
<b>Maximum input values</b>	DC 30 V, 250 mA (passive)
<b>Open-circuit voltage</b>	DC 28.8 V (active)
<b>Switching behavior</b>	Binary, conductive or non-conductive
<b>Switching delay</b>	Adjustable: 0 to 100 s
<b>Number of switching cycles</b>	Unlimited
<b>Assignable functions</b>	<ul style="list-style-type: none"> <li>■ Off</li> <li>■ On</li> <li>■ Diagnostic behavior</li> <li>■ Limit value <ul style="list-style-type: none"> <li>- Mass flow</li> <li>- Volume flow</li> <li>- Corrected volume flow</li> <li>- Density</li> <li>- Reference density</li> <li>- Temperature</li> <li>- Totalizer 1-3</li> </ul> </li> <li>■ Flow direction monitoring</li> <li>■ Status <ul style="list-style-type: none"> <li>- Partially filled pipe detection</li> <li>- Low flow cut off</li> </ul> </li> </ul> <p> The range of options increases if the measuring device has one or more application packages.</p>

### Double pulse output

<b>Function</b>	Double pulse
<b>Version</b>	Open collector Can be set to: <ul style="list-style-type: none"> <li>▪ Active</li> <li>▪ Passive</li> </ul>
<b>Maximum input values</b>	DC 30 V, 250 mA (passive)
<b>Open-circuit voltage</b>	DC 28.8 V (active)
<b>Voltage drop</b>	For 22.5 mA: ≤ DC 2 V
<b>Output frequency</b>	Adjustable: 0 to 1 000 Hz
<b>Damping</b>	Adjustable: 0 to 999 s
<b>Pulse/pause ratio</b>	1:1
<b>Assignable measured variables</b>	<ul style="list-style-type: none"> <li>▪ Mass flow</li> <li>▪ Volume flow</li> <li>▪ Corrected volume flow</li> <li>▪ Density</li> <li>▪ Reference density</li> <li>▪ Temperature</li> </ul> <p> The range of options increases if the measuring device has one or more application packages.</p>

### Relay output

<b>Function</b>	Switch output
<b>Version</b>	Relay output, galvanically isolated
<b>Switching behavior</b>	Can be set to: <ul style="list-style-type: none"> <li>▪ NO (normally open), factory setting</li> <li>▪ NC (normally closed)</li> </ul>
<b>Maximum switching capacity (passive)</b>	<ul style="list-style-type: none"> <li>▪ DC 30 V, 0.1 A</li> <li>▪ AC 30 V, 0.5 A</li> </ul>
<b>Assignable functions</b>	<ul style="list-style-type: none"> <li>▪ Off</li> <li>▪ On</li> <li>▪ Diagnostic behavior</li> <li>▪ Limit value               <ul style="list-style-type: none"> <li>- Mass flow</li> <li>- Volume flow</li> <li>- Corrected volume flow</li> <li>- Density</li> <li>- Reference density</li> <li>- Temperature</li> <li>- Totalizer 1-3</li> </ul> </li> <li>▪ Flow direction monitoring</li> <li>▪ Status               <ul style="list-style-type: none"> <li>- Partially filled pipe detection</li> <li>- Low flow cut off</li> </ul> </li> </ul> <p> The range of options increases if the measuring device has one or more application packages.</p>

### User configurable input/output

One specific input or output is assigned to a user-configurable input/output (configurable I/O) during device commissioning.

The following inputs and outputs are available for assignment:

- Choice of current output: 4 to 20 mA (active), 0/4 to 20 mA (passive)
- Pulse/frequency/switch output
- Choice of current input: 4 to 20 mA (active), 0/4 to 20 mA (passive)
- Status input

The technical values correspond to those of the inputs and outputs described in this section.

Signal on alarm

Depending on the interface, failure information is displayed as follows:

#### **Current output 0/4 to 20 mA**

*4 to 20 mA*

<b>Failure mode</b>	Choose from: <ul style="list-style-type: none"> <li>■ 4 to 20 mA in accordance with NAMUR recommendation NE 43</li> <li>■ 4 to 20 mA in accordance with US</li> <li>■ Min. value: 3.59 mA</li> <li>■ Max. value: 22.5 mA</li> <li>■ Freely definable value between: 3.59 to 22.5 mA</li> <li>■ Actual value</li> <li>■ Last valid value</li> </ul>
---------------------	---

*0 to 20 mA*

<b>Failure mode</b>	Choose from: <ul style="list-style-type: none"> <li>■ Maximum alarm: 22 mA</li> <li>■ Freely definable value between: 0 to 20.5 mA</li> </ul>
---------------------	--

#### **Pulse/frequency/switch output**

<b>Pulse output</b>	
<b>Failure mode</b>	Choose from: <ul style="list-style-type: none"> <li>■ Actual value</li> <li>■ No pulses</li> </ul>
<b>Frequency output</b>	
<b>Failure mode</b>	Choose from: <ul style="list-style-type: none"> <li>■ Actual value</li> <li>■ 0 Hz</li> <li>■ Defined value (<math>f_{\max}</math> 2 to 12 500 Hz)</li> </ul>
<b>Switch output</b>	
<b>Failure mode</b>	Choose from: <ul style="list-style-type: none"> <li>■ Current status</li> <li>■ Open</li> <li>■ Closed</li> </ul>

#### **Relay output**

<b>Failure mode</b>	Choose from: <ul style="list-style-type: none"> <li>■ Current status</li> <li>■ Open</li> <li>■ Closed</li> </ul>
---------------------	--

### Local display

<b>Plain text display</b>	With information on cause and remedial measures
<b>Backlight</b>	Red backlighting indicates a device error.

 Status signal as per NAMUR recommendation NE 107

### Interface/protocol

- Via digital communication:  
HART protocol
- Via service interface

<b>Plain text display</b>	With information on cause and remedial measures
---------------------------	---

### Web server

<b>Plain text display</b>	With information on cause and remedial measures
---------------------------	---

### Light emitting diodes (LED)

<b>Status information</b>	Status indicated by various light emitting diodes The following information is displayed depending on the device version: <ul style="list-style-type: none"> <li>■ Supply voltage active</li> <li>■ Data transmission active</li> <li>■ Device alarm/error has occurred</li> </ul>  Diagnostic information via light emitting diodes
---------------------------	---

---

Low flow cut off      The switch points for low flow cut off are user-selectable.

---

Galvanic isolation      The outputs are galvanically isolated from one another and from earth (PE).

### Protocol-specific data

<b>Manufacturer ID</b>	0x11
<b>Device type ID</b>	0x3B
<b>HART protocol revision</b>	7

**Accuracy of outputs**

The outputs have the following base accuracy specifications.

*Current output*

Accuracy	±5 µA
----------	-------

*Pulse/frequency output*

o.r. = of reading

Accuracy	Max. ±50 ppm o.r. (across the entire ambient temperature range)
----------	---

**Repeatability**

o.r. = of reading; 1 g/cm<sup>3</sup> = 1 kg/l; T = medium temperature

**Base repeatability****Mass flow and volume flow (liquids)**

±0.05 % o.r.

**Mass flow (gases)**

±0.25 % o.r.

 Design fundamentals → 182

**Density (liquids)** $\pm 0.00025 \text{ g/cm}^3$ **Temperature** $\pm 0.25^\circ\text{C} \pm 0.0025 \cdot T^\circ\text{C} (\pm 0.45^\circ\text{F} \pm 0.0015 \cdot (T - 32)^\circ\text{F})$ 

Response time	The response time depends on the configuration (damping).
---------------	---

Influence of ambient temperature

**Current output**

o.r. = off reading

Temperature coefficient	Max. 1 $\mu\text{A}/^\circ\text{C}$
-------------------------	-------------------------------------

**Pulse/frequency output**

Temperature coefficient	No additional effect. Included in accuracy.
-------------------------	---

Influence of medium temperature

**Mass flow and volume flow**When there is a difference between the temperature for zero point adjustment and the process temperature, the typical measured error of the sensor is  $\pm 0.0002\%$  of the full scale value/ $^\circ\text{C}$  ( $\pm 0.0001\%$  of the full scale value/ $^\circ\text{F}$ ).**Density**When there is a difference between the density calibration temperature and the process temperature, the typical measured error of the sensor is  $\pm 0.0001 \text{ g/cm}^3 /^\circ\text{C}$  ( $\pm 0.00005 \text{ g/cm}^3 /^\circ\text{F}$ ). Field density calibration is possible.**Wide-range density specification (special density calibration)**If the process temperature is outside the valid range ( $\rightarrow$  178) the measured error is  $\pm 0.0001 \text{ g/cm}^3 /^\circ\text{C}$  ( $\pm 0.00005 \text{ g/cm}^3 /^\circ\text{F}$ )

- 1 Field density calibration, for example at  $+20^\circ\text{C}$  ( $+68^\circ\text{F}$ )  
 2 Special density calibration

**Temperature** $\pm 0.005 \cdot T^\circ\text{C} (\pm 0.005 \cdot (T - 32)^\circ\text{F})$

## Influence of medium pressure

The table below shows the effect on accuracy of mass flow due to a difference between calibration pressure and process pressure.

o.r. = of reading

DN		[% o.r./bar]	[% o.r./psi]
[mm]	[in]		
8	3/8	No effect	No effect
15	1/2	No effect	No effect
15 FB	1/2 FB	+0.003	+0.0002
25	1	+0.003	+0.0002
25 FB	1 FB	No effect	No effect
40	1½	No effect	No effect
40 FB	1½ FB	No effect	No effect
50	2	No effect	No effect
50 FB	2 FB	No effect	No effect
80	3	No effect	No effect
FB = Full bore			

## Design fundamentals

o.r. = of reading, o.f.s. = of full scale value

BaseAccu = base accuracy in % o.r., BaseRepeat = base repeatability in % o.r.

MeasValue = measured value; ZeroPoint = zero point stability

*Calculation of the maximum measured error as a function of the flow rate*

Flow rate	Maximum measured error in % o.r.
$\geq \frac{\text{ZeroPoint}}{\text{BaseAccu}} \cdot 100$ A0021332	$\pm \text{BaseAccu}$ A0021339
$< \frac{\text{ZeroPoint}}{\text{BaseAccu}} \cdot 100$ A0021333	$\pm \frac{\text{ZeroPoint}}{\text{MeasValue}} \cdot 100$ A0021334

*Calculation of the maximum repeatability as a function of the flow rate*

Flow rate	Maximum repeatability in % o.r.
$\geq \frac{1/2 \cdot \text{ZeroPoint}}{\text{BaseRepeat}} \cdot 100$ A0021335	$\pm \text{BaseRepeat}$ A0021340
$< \frac{1/2 \cdot \text{ZeroPoint}}{\text{BaseRepeat}} \cdot 100$ A0021336	$\pm \frac{1/2 \cdot \text{ZeroPoint}}{\text{MeasValue}} \cdot 100$ A0021337

### Example for max. measured error

E Error: Maximum measured error as % o.r. (example)  
Q Flow rate as %

## 16.7 Installation

"Mounting requirements" → 22

## 16.8 Environment

---

Ambient temperature range → 24

### Temperature tables

Observe the interdependencies between the permitted ambient and fluid temperatures when operating the device in hazardous areas.

For detailed information on the temperature tables, see the separate document entitled "Safety Instructions" (XA) for the device.

---

Storage temperature -50 to +80 °C (-58 to +176 °F)

---

Climate class DIN EN 60068-2-38 (test Z/AD)

---

Degree of protection **Transmitter and sensor**

- As standard: IP66/67, type 4X enclosure
- When housing is open: IP20, type 1 enclosure
- Display module: IP20, type 1 enclosure

**External WLAN antenna**  
IP67

---

Vibration resistance

- Vibration, sinusoidal according to IEC 60068-2-6
  - 2 to 8.4 Hz, 3.5 mm peak
  - 8.4 to 2 000 Hz, 1 g peak
- Vibration broad-band random, according to IEC 60068-2-64
  - 10 to 200 Hz, 0.003 g<sup>2</sup>/Hz
  - 200 to 2 000 Hz, 0.001 g<sup>2</sup>/Hz
  - Total: 1.54 g rms

---

Shock resistance Shock, half-sine according to IEC 60068-2-27  
6 ms 30 g

Impact resistance Rough handling shocks according to IEC 60068-2-31

Electromagnetic compatibility (EMC) As per IEC/EN 61326 and NAMUR Recommendation 21 (NE 21)

For details, refer to the Declaration of Conformity.

## 16.9 Process

Medium temperature range

$T_A$  Ambient temperature

$T_F$  Medium temperature

A Maximum permitted medium temperature at  $T_{A\ max} = 60\ ^\circ\text{C}$  ( $140\ ^\circ\text{F}$ ); higher medium temperatures require a reduction in the ambient temperature  $T_F$  (derating)

B Maximum permitted ambient temperature at the maximum specified medium temperature of the sensor

Sensor	Noninsulated				Insulated			
	A		B		A		B	
	$T_A$	$T_F$	$T_A$	$T_F$	$T_A$	$T_F$	$T_A$	$T_F$
Promass I 300	60 °C (140 °F)	150 °C (302 °F)	-	-	60 °C (140 °F)	120 °C (248 °F)	55 °C (131 °F)	150 °C (302 °F)

### Seals

No internal seals

Density 0 to 5 000 kg/m<sup>3</sup> (0 to 312 lb/cf)

Pressure-temperature ratings An overview of the pressure-temperature ratings for the process connections is provided in the "Technical Information" document

Secondary containment pressure rating The sensor housing is filled with dry inert gas and protects the electronics and mechanics inside.

The following secondary containment pressure rating is only valid for a fully welded sensor housing and/or a device equipped with closed purge connections (never opened/as delivered).

DN		Secondary containment pressure rating (designed with a safety factor ≥ 4)		Secondary containment burst pressure	
[mm]	[in]	[bar]	[psi]	[bar]	[psi]
8	³/₈	40	580	220	3 190
15	½	40	580	220	3 190
15 FB	½ FB	40	580	235	3 408
25	1	40	580	235	3 408
25 FB	1 FB	40	580	220	3 190
40	1 ½	40	580	220	3 190
40 FB	1 ½ FB	40	580	235	3 408
50	2	40	580	235	3 408
50 FB	2 FB	40	580	460	6 670
80	3	40	580	460	6 670

FB = Full bore

 If there is a risk of the measuring tube breaking due to process characteristics, e.g. in the case of corrosive fluids, we recommend the use of sensors whose secondary containment is equipped with special "pressure monitoring connections" (order code for "Sensor option", option CH "purge connection").

With the help of these connections, the fluid collected in the secondary containment can be bled off in the event of tube failure. This is especially important in high-pressure gas applications. These connections can also be used for gas purging (gas detection).

Do not open the purge connections unless the containment can be filled immediately with a dry, inert gas. Use only low gauge pressure to purge. Maximum pressure: 5 bar (72.5 psi).

If a device fitted with purge connections is connected to the purge system, the maximum nominal pressure is determined by the purge system itself or by the device, depending on which component has the lower nominal pressure.

 For information on the dimensions: see the "Mechanical construction" section of the "Technical Information" document

#### Flow limit

Select the nominal diameter by optimizing between the required flow range and permissible pressure loss.

 For an overview of the full scale values for the measuring range, see the "Measuring range" section

- The minimum recommended full scale value is approx. 1/20 of the maximum full scale value
- In most applications, 20 to 50 % of the maximum full scale value can be considered ideal
- A low full scale value must be selected for abrasive media (such as liquids with entrained solids): flow velocity < 1 m/s (< 3 ft/s).
- For gas measurement the following rules apply:
  - The flow velocity in the measuring tubes should not exceed half the sound velocity (0.5 Mach).
  - The maximum mass flow depends on the density of the gas: formula →  169

Pressure loss

To calculate the pressure loss, use the *Applicator* sizing tool → 166

System pressure

→ 24

## 16.10 Mechanical construction

Design, dimensions

For the dimensions and installation lengths of the device, see the "Technical Information" document, "Mechanical construction" section

Weight

Cast transmitter version, stainless: +6 kg (+13 lbs)

Transmitter version for the hazardous area: +2 kg (+4.4 lbs)

All values (weight) refer to devices with EN/DIN PN 40 flanges.

### Weight in SI units

-------------------	---

## 16.11 Operability

---

Languages	<p>Can be operated in the following languages:</p> <ul style="list-style-type: none"> <li>▪ Via local operation English, German, French, Spanish, Italian, Dutch, Portuguese, Polish, Russian, Turkish, Chinese, Japanese, Korean, Arabic, Bahasa (Indonesian), Thai, Vietnamese, Czech, Swedish</li> <li>▪ Via Web browser English, German, French, Spanish, Italian, Dutch, Portuguese, Polish, Russian, Turkish, Chinese, Japanese, Korean, Arabic, Bahasa (Indonesian), Thai, Vietnamese, Czech, Swedish</li> <li>▪ Via "FieldCare", "DeviceCare" operating tool: English, German, French, Spanish, Italian, Chinese, Japanese</li> </ul>
-----------	---

---

Local operation	<p><b>Via display module</b></p> <p>Two display modules are available:</p> <ul style="list-style-type: none"> <li>▪ Order code for "Display; operation", option F "4-line, backlit, graphic display; touch control"</li> <li>▪ Order code for "Display; operation", option G "4-line, backlit, graphic display; touch control + WLAN"</li> </ul>
	 Information about WLAN interface →  64

A0026795

■ 33 Operation with touch control

#### Display elements

- 4-line, illuminated, graphic display
- White background lighting; switches to red in event of device errors
- Format for displaying measured variables and status variables can be individually configured
- Permitted ambient temperature for the display: -20 to +60 °C (-4 to +140 °F)  
The readability of the display may be impaired at temperatures outside the temperature range.

#### Operating elements

- External operation via touch control (3 optical keys) without opening the housing:  $\oplus$ ,  $\ominus$ ,  $\otimes$
- Operating elements also accessible in various hazardous areas

#### Via remote display and operating module DKX001

The remote display and operating module DKX001 is available as an optional extra:  
Order code for "Display; operation", option **O** "Separate backlit, 4-line display; 10 m (30 ft)  
Cable; touch control"

**i** Another device version, e.g. other housing material, other cable length etc., can be ordered via the separate product structure DKX001. The measuring device is ordered with:  
Order code for "Display; operation", option **M** "None, prepared for remote display"

A0026786

■ 34 Operation via remote display and operating module DKX001

### *Display and operating elements*

The display and operating elements correspond to those of the display module → [63](#) 190.

-  ■ The measuring device is always supplied with a dummy cover when the remote display and operating module DKX001 is used. Display or operation at the transmitter is not possible in this case.
- The remote display and operating module DKX001 can also be ordered separately and subsequently as an accessory without a measuring device → [63](#) 165.
- If ordered subsequently: The remote display and operating module DKX001 cannot be connected at the same time as the existing display or operation unit. Only one display or operation unit may be connected to the transmitter at any one time.

### *Material*

The housing material of the display and operating module DKX001 depends on the choice of transmitter housing material.

Transmitter housing	Order code for "Housing"	Material	Remote display and operating module
		Material	
Option A "Aluminum, coated"		AlSi10Mg, coated	AlSi10Mg, coated
Option L "Cast, stainless"		Cast stainless steel, 1.4409 (CF3M) similar to 316L	1.4409 (CF3M)

### *Cable entry*

Corresponds to the choice of transmitter housing, order code for "Electrical connection".

### *Connecting cable*

→ [63](#) 33

### *Dimensions*

 For the dimensions, see the "Technical Information" document, "Mechanical construction" section.

Remote operation → [63](#) 63

Service interface → [64](#) 64

Supported operating tools Different operating tools can be used for local or remote access to the measuring device. Depending on the operating tool used, access is possible with different operating units and via a variety of interfaces.

Supported operating tools	Operating unit	Interface	Additional information
Web browser	Notebook, PC or tablet with Web browser	<ul style="list-style-type: none"> <li>■ CDI-RJ45 service interface</li> <li>■ WLAN interface</li> </ul>	Special Documentation for the device → <a href="#">63</a> 199

Supported operating tools	Operating unit	Interface	Additional information
FieldCare SFE500	Notebook, PC or tablet with Microsoft Windows system	<ul style="list-style-type: none"> <li>■ CDI-RJ45 service interface</li> <li>■ WLAN interface</li> <li>■ Fieldbus protocol</li> </ul>	→  166
Device Xpert	Field Xpert SFX 100/350/370	HART and FOUNDATION Fieldbus fieldbus protocol	Operating Instructions BA01202S Device description files: Use update function of handheld terminal

Other operating tools based on FDT technology with a device driver such as DTM/iDTM or DD/EDD can be used for device operation. These operating tools are available from the individual manufacturers. Integration into the following operating tools, among others, is supported:

- Process Device Manager (PDM) by Siemens → [www.siemens.com](http://www.siemens.com)
- Asset Management Solutions (AMS) by Emerson → [www.emersonprocess.com](http://www.emersonprocess.com)
- FieldCommunicator 375/475 by Emerson → [www.emersonprocess.com](http://www.emersonprocess.com)
- Field Device Manager (FDM) by Honeywell → [www.honeywellprocess.com](http://www.honeywellprocess.com)
- FieldMate by Yokogawa → [www.yokogawa.com](http://www.yokogawa.com)
- PACTWare → [www.pactware.com](http://www.pactware.com)

The associated device description files are available at: [www.endress.com](http://www.endress.com) → Downloads

### Web server

Thanks to the integrated Web server, the device can be operated and configured via a Web browser and via a service interface (CDI-RJ45) or a WLAN interface. The structure of the operating menu is the same as for the local display. In addition to the measured values, status information on the device is also displayed and allows the user to monitor the status of the device. Furthermore the measuring device data can be managed and the network parameters can be configured. The WLAN connection requires a device that acts as an access point to enable communication via a computer or mobile handheld terminal.

#### Supported functions

Data exchange between the operating unit (such as a notebook for example) and the measuring device:

- Uploading the configuration from the measuring device (XML format, configuration backup)
- Save the configuration to the measuring device (XML format, restore configuration)
- Export event list (.csv file)
- Export parameter settings (.csv file, create documentation of the measuring point configuration)
- Export the Heartbeat verification log (PDF file, only available with the "Heartbeat Verification" application package)
- Flash firmware version for device firmware upgrade, for instance

---

### HistoROM data management

The measuring device features HistoROM data management. HistoROM data management comprises both the storage and import/export of key device and process data, making operation and servicing far more reliable, secure and efficient.

When the device is delivered, the factory settings of the configuration data are stored as a backup in the device memory. This memory can be overwritten with an updated data record, for example after commissioning.

### Additional information on the data storage concept

There are different types of data storage units in which device data are stored and used by the device:

	Device memory	T-DAT	S-DAT
<b>Available data</b>	<ul style="list-style-type: none"> <li>■ Event history, such as diagnostic events</li> <li>■ Parameter data record backup</li> <li>■ Device firmware package</li> <li>■ Driver for system integration e.g.: DD for HART</li> </ul>	<ul style="list-style-type: none"> <li>■ Measured value memory ("Extended HistoROM" order option)</li> <li>■ Current parameter data record (used by firmware at run time)</li> <li>■ Maximum indicators (min/max values)</li> <li>■ Totalizer values</li> </ul>	<ul style="list-style-type: none"> <li>■ Sensor data: diameter etc.</li> <li>■ Serial number</li> <li>■ User-specific access code (to use the "Maintenance" user role)</li> <li>■ Calibration data</li> <li>■ Device configuration (e.g. SW options, fixed I/O or multi I/O)</li> </ul>
<b>Storage location</b>	Fixed on the user interface board in the connection compartment	Can be plugged into the user interface board in the connection compartment	In the sensor plug in the transmitter neck part

### Data backup

#### Automatic

- The most important device data (sensor and transmitter) are automatically saved in the DAT modules
- If the transmitter or measuring device is replaced: once the T-DAT containing the previous device data has been exchanged, the new measuring device is ready for operation again immediately without any errors
- If the sensor is replaced: once the sensor has been replaced, new sensor data are transferred from the S-DAT in the measuring device and the measuring device is ready for operation again immediately without any errors

#### Manual

Additional parameter data record (complete parameter settings) in the integrated device memory for:

- Data backup function  
Backup and subsequent restoration of a device configuration in the device memory
- Data comparison function  
Comparison of the current device configuration with the device configuration saved in the device memory

### Data transfer

#### Manual

Transfer of a device configuration to another device using the export function of the specific operating tool, e.g. with FieldCare, DeviceCare or Web server: to duplicate the configuration or to store in an archive (e.g. for backup purposes)

### Event list

#### Automatic

- Chronological display of up to 20 event messages in the events list
- If the **Extended HistoROM** application package (order option) is enabled: up to 100 event messages are displayed in the events list along with a time stamp, plain text description and remedial measures
- The events list can be exported and displayed via a variety of interfaces and operating tools e.g. DeviceCare, FieldCare or Web server

### Data logging

#### Manual

If the **Extended HistoROM** application package (order option) is enabled:

- Record up to 1000 measured values via 1 to 4 channels
- User configurable recording interval
- Record up to 250 measured values via each of the 4 memory channels
- Export the measured value log via a variety of interfaces and operating tools e.g. FieldCare, DeviceCare or Web server
- Use the recorded measured value data in the integrated device simulation function in the **Diagnostics** submenu (→  155).

### Service logbook

#### Manual

- Create up to 20 user-specific events with a date and customized text in a separate logbook for documentation of the measuring point
- Use for calibration or service operations, for example, or for maintenance or revision work that has been performed

## 16.12 Certificates and approvals

CE mark	The measuring system is in conformity with the statutory requirements of the applicable EU Directives. These are listed in the corresponding EU Declaration of Conformity along with the standards applied. Endress+Hauser confirms successful testing of the device by affixing to it the CE mark.
C-Tick symbol	The measuring system meets the EMC requirements of the "Australian Communications and Media Authority (ACMA)".
Ex approval	The devices are certified for use in hazardous areas and the relevant safety instructions are provided in the separate "Safety Instructions" (XA) document. Reference is made to this document on the nameplate.
Sanitary compatibility	<ul style="list-style-type: none"><li>▪ 3-A approval</li><li>▪ EHEDG-tested</li></ul>
Functional safety	<p>The measuring device can be used for flow monitoring systems (min., max., range) up to SIL 2 (single-channel architecture; order code for "Additional approval", option <b>LA</b>) and SIL 3 (multichannel architecture with homogeneous redundancy) and is independently evaluated and certified by the TÜV in accordance with IEC 61508.</p> <p>The following types of monitoring in safety equipment are possible:</p> <ul style="list-style-type: none"><li>▪ Mass flow</li><li>▪ Volume flow</li><li>▪ Density</li></ul> <p> Functional Safety Manual with information on the SIL device →  198</p>

**HART certification****HART interface**

The measuring device is certified and registered by the FieldComm Group. The measuring system meets all the requirements of the following specifications:

- Certified according to HART 7
- The device can also be operated with certified devices of other manufacturers (interoperability)

**Pressure Equipment Directive**

- With the identification PED/G1/x (x = category) on the sensor nameplate, Endress +Hauser confirms conformity with the "Essential Safety Requirements" specified in Appendix I of the Pressure Equipment Directive 2014/68/EC.
- Devices not bearing this marking (PED) are designed and manufactured according to good engineering practice. They meet the requirements of Art. 4, Par. 3 of the Pressure Equipment Directive 2014/68/EU. The range of application is indicated in tables 6 to 9 in Annex II of the Pressure Equipment Directive 2014/68/EC.

**Radio approval**

Europe:  
RED 2014/53/EU

United States of America:  
CFR Title 47, FCC Part 15.247

Canada:  
RSS-247 Issue 1

Japan:  
Article 2 clause 1 item 19

 Additional country-specific approvals on request.

**Additional certification****CRN approval**

Some device versions have CRN approval. A CRN-approved process connection with a CSA approval must be ordered for a CRN-approved device.

**Tests and certificates**

- Pressure test, internal procedure, inspection certificate
- 3.1 Material certificate, wetted parts and secondary containment, EN10204-3.1 inspection certificate
- PMI test (XRF), internal procedure, wetted parts, EN10204-3.1 inspection certificate
- EN10204-2.1 confirmation of compliance with the order and EN10204-2.2 test report

**Other standards and guidelines**

- EN 60529  
Degrees of protection provided by enclosures (IP code)
- IEC/EN 60068-2-6  
Environmental influences: Test procedure - Test Fc: vibrate (sinusoidal).
- IEC/EN 60068-2-31  
Environmental influences: Test procedure - Test Ec: shocks due to rough handling, primarily for devices.
- EN 61010-1  
Safety requirements for electrical equipment for measurement, control and laboratory use - general requirements
- IEC/EN 61326  
Emission in accordance with Class A requirements. Electromagnetic compatibility (EMC requirements).
- NAMUR NE 21  
Electromagnetic compatibility (EMC) of industrial process and laboratory control equipment

- NAMUR NE 32  
Data retention in the event of a power failure in field and control instruments with microprocessors
- NAMUR NE 43  
Standardization of the signal level for the breakdown information of digital transmitters with analog output signal.
- NAMUR NE 53  
Software of field devices and signal-processing devices with digital electronics
- NAMUR NE 80  
The application of the pressure equipment directive to process control devices
- NAMUR NE 105  
Specifications for integrating fieldbus devices in engineering tools for field devices
- NAMUR NE 107  
Self-monitoring and diagnosis of field devices
- NAMUR NE 131  
Requirements for field devices for standard applications
- NAMUR NE 132  
Coriolis mass meter
- ETSI EN 300 328  
Guidelines for 2.4 GHz radio components.
- EN 301489  
Electromagnetic compatibility and radio spectrum matters (ERM).

## 16.13 Application packages

Many different application packages are available to enhance the functionality of the device. Such packages might be needed to address safety aspects or specific application requirements.

The application packages can be ordered with the device or subsequently from Endress+Hauser. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: [www.endress.com](http://www.endress.com).

 Detailed information on the application packages:  
Special Documentation for the device

### Diagnostics functions

Package	Description
Extended HistoROM	<p>Comprises extended functions concerning the event log and the activation of the measured value memory.</p> <p>Event log: Memory volume is extended from 20 message entries (standard version) to up to 100 entries.</p> <p>Data logging (line recorder):</p> <ul style="list-style-type: none"> <li>■ Memory capacity for up to 1000 measured values is activated.</li> <li>■ 250 measured values can be output via each of the 4 memory channels. The recording interval can be defined and configured by the user.</li> <li>■ Measured value logs can be accessed via the local display or operating tool e.g. FieldCare, DeviceCare or Web server.</li> </ul>

Heartbeat Technology	Package	Description
	Heartbeat Verification +Monitoring	<p><b>Heartbeat Monitoring</b></p> <p>Continuously supplies data, which are characteristic of the measuring principle, to an external condition monitoring system for the purpose of preventive maintenance or process analysis. These data enable the operator to:</p> <ul style="list-style-type: none"> <li>▪ Draw conclusions - using these data and other information - about the impact process influences (such as corrosion, abrasion, buildup etc.) have on the measuring performance over time.</li> <li>▪ Schedule servicing in time.</li> <li>▪ Monitor the process or product quality, e.g. gas pockets.</li> </ul> <p><b>Heartbeat Verification</b></p> <p>Meets the requirement for traceable verification to DIN ISO 9001:2008 Chapter 7.6 a) "Control of monitoring and measuring equipment".</p> <ul style="list-style-type: none"> <li>▪ Functional testing in the installed state without interrupting the process.</li> <li>▪ Traceable verification results on request, including a report.</li> <li>▪ Simple testing process via local operation or other operating interfaces.</li> <li>▪ Clear measuring point assessment (pass/fail) with high test coverage within the framework of manufacturer specifications.</li> <li>▪ Extension of calibration intervals according to operator's risk assessment.</li> </ul>

Concentration	Package	Description
	Concentration measurement and special density	<p><b>Calculation and outputting of fluid concentrations</b></p> <p>Many applications use density as a key measured value for monitoring quality or controlling processes. The device measures the density of the fluid as standard and makes this value available to the control system.</p> <p>The "Special Density" application package offers high-precision density measurement over a wide density and temperature range particularly for applications subject to varying process conditions.</p> <p>With the help of the "Concentration Measurement" application package, the measured density is used to calculate other process parameters:</p> <ul style="list-style-type: none"> <li>▪ Temperature-compensated density (reference density).</li> <li>▪ Percentage mass of the individual substances in a two-phase fluid. (Concentration in %).</li> <li>▪ Fluid concentration is output with special units ("Brix, "Baumé, "API, etc.) for standard applications.</li> </ul>

Viscosity	Package	Description
	Viscosity measurement	<p><b>In-line and real-time viscosity measurement</b></p> <p>Promass I with the "Viscosity" application package also measures the real-time viscosity of the fluid directly in the process, in addition to measuring the mass flow/volume flow/ temperature and density.</p> <p>The following viscosity measurements are performed on liquids:</p> <ul style="list-style-type: none"> <li>▪ Dynamic viscosity</li> <li>▪ Kinematic viscosity</li> <li>▪ Temperature-compensated viscosity (kinematic and dynamic) in relation to the reference temperature</li> </ul> <p>Viscosity measurement can be used for Newtonian and non-Newtonian applications and supplies accurate measured data irrespective of the flow, even under difficult conditions.</p>

Event list	156
I/O configuration	80
Input values	133
Measured values	129
Measured variables	130
Output values	134
Overview	45
Process variables	110
Pulse/frequency/switch output 1 to n	134
Relay output 1 to n	135
Reset access code	122
Sensor adjustment	111
Simulation	123
Status input	82
Status input 1 to n	133
System units	76
Totalizer	132
Totalizer 1 to n	112
Totalizer handling	136
Value current output 1 to n	134
Web server	62
WLAN Settings	119
Zero point adjustment	112
Supply voltage	177
Surface roughness	189
Switch output	174
Symbols	
For communication	46
For correction	49
For diagnostic behavior	46
For locking	46
For measured variable	46
For measurement channel number	46
For menus	48
For parameters	48
For status signal	46
For submenu	48
For wizard	48
In the status area of the local display	46
In the text and numeric editor	49
System design	
Measuring system	168

System integration	69
System pressure	24
<b>T</b>	
Technical data, overview	168
Temperature range	
Ambient temperature range for display	189
Medium temperature	184
Storage temperature	20
Terminal assignment	34
terminals	178
Tests and certificates	195
Text editor	49
Thermal insulation	24
Tool tip	
see Help text	
Tools	
Electrical connection	32
Installation	29
Transport	20
Totalizer	
Configuration	112
Transmitter	
Turning the display module	30
Turning the housing	30
Transporting the measuring device	20
Troubleshooting	
General	141
Turning the display module	30
Turning the electronics housing	
see Turning the transmitter housing	
Turning the transmitter housing	30
<b>U</b>	
Use of the measuring device	
Borderline cases	10
Incorrect use	10
see Designated use	
User interface	
Current diagnostic event	155
Previous diagnostic event	155
User roles	45
<b>V</b>	
Version data for the device	69
Vibration resistance	183
Vibrations	26
<b>W</b>	
W@M	162, 163
W@M Device Viewer	16, 163
Weight	
SI units	186
Transport (notes)	20
US units	186

**Wizard**

Current input . . . . .	81
Current output . . . . .	83
Define access code . . . . .	122
Display . . . . .	103
Low flow cut off . . . . .	107
Partially filled pipe detection . . . . .	108
Pulse/frequency/switch output . . . . .	88, 90, 98
Relay output 1 to n . . . . .	100
Select medium . . . . .	79
WLAN settings . . . . .	119
Workplace safety . . . . .	11
Write access . . . . .	56
Write protection	
Via access code . . . . .	126
Via write protection switch . . . . .	127
Write protection switch . . . . .	127
